Food Plants of China Shiu-ying Hu, 2005 The food plants of an area provide the material basis for the survival of its population, and furnish inspiring stimuli for cultural development. There are two parts in this book. Part 1 introduces the cultural aspects of Chinese food plants and the spread of Chinese culinary culture to the world. It also describes how the botanical and cultural information was acquired; what plants have been selected by the Chinese people for food; how these foodstuffs are produced, preserved, and prepared; and what the western societies can learn from Chinese practices. Part 2 provides the botanical identification of the plant kingdom for the esculents used in China as food and/or as beverage. The plants are illustrated with line drawings or composite photographic plates. This book is useful not only as a text for general reading, but also as a work reference. Naturally, it would be a useful addition to the general collection of any library.

Encyclopedia of Traditional Chinese Medicines - Molecular Structures, Pharmacological Activities, Natural Sources and Applications Jiaju Zhou, Guirong Xie, Xinjian Yan, 2011-02-21 This set of six volumes provides a systematic and standardized description of 23,033 chemical components isolated from 6,926 medicinal plants, collected from 5,535 books/articles published in Chinese and international journals. A chemical structure with stereo-chemistry bonds is provided for each chemical component, in addition to conventional information, such as Chinese and English names, physical and chemical properties. It includes a name list of medicinal plants from which the chemical component was isolated. Furthermore, abundant pharmacological data for nearly 8,000 chemical components are presented, including experimental method, experimental animal, cell type, quantitative data, as well as control compound data. The seven indexes allow for complete cross-indexing. Regardless whether one searches for the molecular formula of a compound, the pharmacological activity of a compound, or the English name of a plant, the information in the book can be retrieved in multiple ways.

Plant-Caused Skin Disorders Vaskrsija Janjić,2021-09-28 This book covers the basic concepts of phytodermatoses and groups of compounds in plants that have such physiological effects on humans. In order to allow the reader a better understanding of phytodermatoses, skin reactions caused by contact with plants are classified as allergic contact dermatitis, irritant contact dermatitis, contact urticarial, and phytophoto dermatitis. Dermatoses are caused by certain plant constituents that are often classified into groups, such as alkaloids, glycosides, glucosinolates, saponins, phenols, and other compounds. The book also describes 68 plants species that cause dermatoses in humans, especially in those who are engaged in their production, cultivation, planting, pruning, arranging and selling. The plants are classified into 25 families to which they belong. For each plant, the morphological description, habitat, distribution, variability, and their main constituents with toxic and dermatological effects are given.

Integrating Conventional and Chinese Medicine in Cancer Care Tai Lahans,2007-06-05 This new clinical resource clearly explains how to approach integrated care in a way that combines Chinese herbal medicine with Western medicine to enhance and improve medical care for patients with cancer - without undermining or negatively impacting patients' medical treatment. Each chapter covers a different type of cancer, first introducing the conventional medical understanding of that cancer including its etiology, diagnosis, and treatment according to staging and type. The chapter then covers that cancer from the perspective of Oriental medicine. Case studies illustrate the integration of treatment for each cancer type, raising important issues and considerations associated with specific cancers and treatments. Formulas are presented within the context of conventional treatment, intended to enhance the effectiveness of treatment and/or treat side effects without undermining the treatment's function. Each formula is followed by a discussion of how and why the herbs are used, including classical Chinese theory and relevant

pharmaceutical studies. Staging and the age and performance status of various patients is used as a means by which to explain how formulas are changed. Case studies explore issues related to the integration of treatment for each type of cancer.

Dietary Chinese Herbs Yanze Liu, Zhimin Wang, Junzeng Zhang, 2015-05-18 This work presents up-to-date information on chemical, pharmacological, clinical studies and historical uses of common dietary Chinese herbs. Authored by native experts in the field, the reader is introduced to each herb with a brief chronological review of Chinese literature on dietary herb uses, with chapters dedicated to each selected herb including color photos for each herb. In addition, Chinese characters as well as the Latin botanical name indices, and chemical structures for the known active compounds are also provided. The clear layout examines the health benefits that have been studied for centuries, including current clinical and toxicological data. A wide range of Traditional Chinese Medicine (TCM) herbs are investigated for their suitability into daily diets for maintaining general wellness or disease prevention. In the past decades, natural health products, dietary supplements, functional foods, or nutraceuticals have emerged in the West due to the increasing demand for non-pharmaceutical healthcare products. Traditional Chinese Medicine disease prevention and treatment incorporates the use of foods, and herbal medicine in an integrated manner, and thus the dietary Chinese herbs in used in TCM for thousands of years could be sources for developing new, effective, and safe ingredients to capture the rapidly expanding opportunity in the global market place.

Drug Design with an Ethnobotanical Concept, Volume 1 Stefan Dahl, 2023-08-02 This handbook comprises huge data amounts considering the areas of world-wide Ethnopharmacology, Pharmacognosy together with modern identification tools within Phytochemistry. In recent years, modern drug design has its return back to nature, rather applying guidance achieved from herb remedies valid during centuries. The handbook established on information of 100 medicinal plants from all parts of the globe, encloses now over 4700 chemical components, their structural formulas and so far, over 500 identification spectra (EI-MS 85%, NMR 15%). It facilitates the rapid survey on medicinal plants as well as search for remedies, where the possibility exists in searching at Portuguese and Russian besides English. Why have I chosen those languages? Because geographically you will be understood on almost of the entire globe! From Western Europe to Hawaii using English, from Minsk to Vladivostok at Russian and because of many Portuguese colonies throughout the world with that language. The names of 100 specimens are provided in Portuguese, English, French, German, Russian, Swedish, Finnish and Hungarian out of Latin (scientific name). Included is a chapter that deals on preparations made for household remedies as well as procedures for industrial upscale for medicine production. The main idea is to provide a structure-based knowledge of synergisms between physiological activities of plant

compounds originating from 2nd metabolic pathways and their approved beneficial curing power of "common" diseases (flue, cough, nausea, insomnia) until severe complications like virus diseases, pandemics, cancer and alike.

Natural Poisons and Venoms Eberhard Teuscher,Ulrike Lindequist,2023-06-06

Biogenic toxins are fascinating natural products characterized by an enormous diversity of chemical structures and pharmacological activities. They not only pose hazards to humans and animals, but they are important components in the interplay of substances and living beings in nature and, moreover, important sources for new drugs. The present book is the first volume of the 5-volume series *Natural Poisons and Venoms*. Volumes 1-3 cover poisons produced by plants, volume 4 summarizes poisons and venoms of animals and volume 5 deal with poisons of fungi, cyanobacteria, and other microorganisms. This volume starts with a fundamental chapter on history, chemistry and pharmacology of natural toxins, importance of the toxins for their producer, potential danger for humans and animals, and general aspects of toxicology including notes for first aid and proposals for clinical measures. The following chapters focus on the poisonous representatives of terpenes and the related steroids. The reader will be informed about the botany and occurrence of plants producing these toxins, the chemistry, the biogenesis and the pharmacology of the toxins, possible causes of poisonings, precautions to avoid poisonings, symptoms of poisonings of humans and animals, proposals for treatment measures and the possible usefulness, in the past, in present and in the future, of these toxins, especially for the development of new medicines. Numerous images of plants and chemical structural formulas complete the book. Extensive lists of literature references are given. The handbook is intended for physicians, veterinarians, pharmacists, chemists, biochemists, food chemists and biologists, for the students in the relevant fields, and also for interested laymen. You will be informed about all aspects of natural toxins based on the latest knowledge.

Enhancement of Nutritional Profile/Biological Activity of Plant-Based Foods by Fermentation Yu Xiao,Xiaolong Ji,Xiudong Xia,2023-01-31 With ever-increasing health consciousness among consumers in the worldwide in the last decades, great attention has been paid on the application of biotechnology methods in the agricultural and food industry. Especially for plant-based foods production, which exhibit co-benefits to human the health and climate. Traditional fermented foods play a crucial role in human diets around the world because of their unique flavors, great nutritional value, and health-beneficial effects. Fermentation is one of the most traditional but still prevalent bio-processing approaches in the food industry, with the great potential to improve the flavor, sensory, nutritional value and biological activity (including antioxidant capacity, anti-cancer, anti-diabetic anti-inflammatory, regulating intestinal flora properties) of food products. The application of microbial food processing method has attracted the interest of researchers and industries due to its simple, environmentally friendly, and cost-efficiently advantages. The use of fermentation and selected generally recognized as safe (GRAS) starters, such as lactic acid bacteria, yeasts and filamentous fungi has been considered as an excellent method to improve the nutritional value or biological activity of foods by the biosynthesis/biotransformation/generation of bioactive compounds (e.g., phenolic compounds, oligosaccharide), or by the degradation of anti-nutritional factors. In the last years, the exploitation of microbes isolated from traditional fermented foods or as the result of the inoculation of selected starters was conducted to produce novel fermented plant-based foods with beneficial viable microorganisms and/or their metabolites that positively impact on human health. This Research Topic aims to focus on the application of microorganisms in processing of fermented plant-based foods to improve nutritional profile and/or biological activity. In particular, it is welcome focusing on matrices fermentation by beneficial microorganisms, processing for food substrate/by-product valorization, augmentation of food matrix bioactive compounds via fermentation. We invite authors to submit different types of manuscripts (e.g., Original Research Articles, short communications, and Review Articles) that focus on but are not limited to the following topics: □ Microbial metabolic pathways associated with the accumulation of bioactive compounds of fermented foods. □ Innovative fermentation approaches to improve the nutritional and functional properties in the final products. □ Valorization of plant-based food matrices/by-products via fermentation. □ Plant-based anti-nutritional factors degradation by microorganisms. □ Development of high added-value and novel fermented

products. □ Production of bioactive compounds with health beneficial effects.
□ Human intestinal flora simulated effect on plant-based food.
