Utopia's Garden E. C. Spary,2010-12-15 The royal Parisian botanical garden, the Jardin du Roi, was a jewel in the crown of the French Old Regime, praised by both rulers and scientific practitioners. Yet unlike many such institutions, the Jardin not only survived the French Revolution but by 1800 had become the world's leading public establishment of natural history: the Muséum d'Histoire Naturelle. E. C. Spary traces the scientific, administrative, and political strategies that enabled the foundation of the Muséum, arguing that agriculture and animal breeding rank alongside classification and collections in explaining why natural history was important for French rulers. But the Muséum's success was also a consequence of its employees' Revolutionary rhetoric: by displaying the natural order, they suggested, the institution could assist in fashioning a self-educating, self-policing Republican people. Natural history was presented as an indispensable source of national prosperity and individual virtue. Spary's fascinating account opens a new chapter in the history of France, science, and the Enlightenment.

French Medical Culture in the Nineteenth Century Ann Elizabeth Fowler La Berge,Mordechai Feingold,1994 The eleven essays in this volume illustrate the richness, complexity, and diversity of French medical culture in the nineteenth century, a period that witnessed the medicalization of French society. Medical themes permeated contemporary culture and politics, and medical discourse infused many levels of French society from the bastions of science - the medical faculties and research institutions - to novels, the theater, and the daily lives of citizens as patients. The contributors to this volume - all established scholars in the history of medicine - present the French medical experience from the point of view of both practitioners and patients, and show how medical themes colored popular perceptions and shaped public policies. Topics addressed range from popular medicine to elite Parisian medicine, the interaction of literary and medical discourse, social theater, medical research and practice, medical specialization and education. The essays reflect current trends of medico-historical analysis which emphasize the centrality of class, race, and gender in understanding concepts of disease and the practice of medicine. They show how the medical experience of patients, practitioners, students, and researchers varied according to social class, gender, and geography and the importance of these factors for the construction of disease.

The North Transept of Reims Cathedral Jennifer M. Feltman,2016-07-15 This interdisciplinary volume in the AVISTA series is the first book to focus solely on the north transept of Reims Cathedral, the portion of the gothic building that served as the canons' primary entrance to the cathedral from their adjoining cloister in the thirteenth century. Despite the importance of its sculpture and stained glass, as well as its ritual use by the canons, the north transept remains one of the least understood portions of the cathedral--in part because its sequence of construction is so complex, even improvised. Until recently, important archaeological evidence of the transept's substructures was unavailable. This is, however, no longer the case. The current volume presents this new subterranean evidence alongside careful studies of the stones above ground, analysis of the geometry used in the transept's design, iconographic and stylistic studies of its sculpture and glass, and extant medieval documents, which record events bearing upon its construction. Essays by international specialists of the cathedral's archaeology, architecture, sculpture, and stained glass address issues of the north transept's evolving design and visual programs, thereby significantly clarifying and revising the building's chronology. Essays also consider the meaning of its visual programs in light of architectural adaptation and contemporary socio-historical events--whether royal coronations or the infamous revolts of the local burghers. In addition to presenting a readily accessible state of the research on the north transept, the volume also provides a model for interdisciplinary and international collaboration in the study of medieval buildings.

Science and Polity in France Charles Coulston Gillispie,2009-01-10 By the end of the eighteenth century, the French dominated the world of science. And although science and politics had little to do with each other directly, there were increasingly frequent intersections. This is a study of those transactions between science and state, knowledge and power--on the eve of the French Revolution. Charles Gillispie explores how the links between science and polity in France were related to governmental reform, modernization of the economy, and professionalization of science and engineering.

Petite vie de Marcel Légaut Thérèse de Scott,2011-01-27 Parmi les témoins qui ont marqué le catholicisme français au XXe siècle, la figure de Marcel Légaut (1900-1990) rayonne d'un éclat particulier. Normalien, agrégé et docteur en mathématiques, il exerça à l'université de Rennes de 1927 à 1940. Il changea radicalement de vie ensuite pour s'établir dans un hameau de la Drôme, en France, comme paysan et berger. Ce croyant va surtout questionner ses contemporains en voulant renouveler un christianisme devenu par trop ritualiste et moralisateur. Libre, souvent aux frontières, il a plutôt exercé un ministère d'influence dans des cercles d'intellectuels chrétiens, en approfondissant l'expérience de la foi. Il est l'auteur de livres à succès comme L'Homme à la recherche de son humanité et Patience et passion d'un croyant.

Paris Alexandra Gajewski,John McNeill,2023-07-24 Paris: The Powers that Shaped the Medieval City considers the various forces – royal, monastic and secular – that shaped the art, architecture and topography of Paris between c. 1100 and c. 1500, a period in which Paris became one of the foremost metropolises in the West. The individual contributions, written by an international group of scholars, cover the subject from many different angles. They encompass wide-ranging case studies that address architecture, manuscript illumination and stained glass, as well as questions of liturgy, religion and social life. Topics include the early medieval churches that preceded the current cathedral church of Notre-Dame and cultural production in the Paris area in the late 12th and early 13th centuries, as well as Paris's chapels and bridges. There is new evidence for the source of the c. 1240 design for a celebrated window in the Sainte-Chapelle, an evaluation of the liturgical arrangements in the new shrine-choir of Saint-Denis, built 1140–44, and a valuable assessment of the properties held by the Cistercian Order in Paris in the Middle Ages. Also, the book investigates the relationships between manuscript illuminators in the 14th century and representations of Paris in manuscripts and other media up to the late 15th century. Paris: The Powers that Shaped the Medieval City updates and enlarges our knowledge of this key city in the Middle Ages.
