Horror and Science Fiction Films IV Donald C. Willis, 1997 This fourth title in a unique series that combines reference and analytical qualities in chronicling the horror and science fiction genres, Horror and Science Fiction Films IV brings the earlier three volumes in the series up to date, concentrating on the period from 1984-1994, as well as updating entries from the previous volumes and adding newly-discovered titles from 1900-1983. Entries in the main list include credits, cast, synopsis, and annotation. The introduction lists 1995 releases in the genres and 1996 releases through the summer, cites the more memorable films in the genres for both the current period and 1900-1984, and serves as an index

to key titles in the main list, including long-lost titles such as the - obscure silent *Were Tiger* and the 1931 *The Phantom*. Willis includes many films from around the world that are not found in any other English-language film reference work. One appendix provides thumbnail descriptions of problem and peripheral films; another updates entries in the first three books with alternate titles; and a third appendix serves as an index to the approximately 7,000 films listed in the first three volumes in the series as well as in the current volume, thus bringing the total number of films covered in this series to roughly 11,000 titles.

Anime from Akira to Princess Mononoke S. Napier, 2001-05-03

With the popularity of Pokemon still far from waning, Japanese animation, known as anime to its fans, has a firm hold on American pop culture. However, anime is much more than children's cartoons. It runs the gamut from historical epics to sci-fi sexual thrillers. Often dismissed as fanciful entertainment, anime is actually quite adept at portraying important social and cultural issues like alienation, gender inequality, and teenage angst. This book investigates the ways that anime presents these issues in an in-depth and sophisticated manner, uncovering the identity conflicts, fears over rapid technological advancement, and other key themes present in much of Japanese animation.

The Anime Machine Thomas Lamarre, 2013-11-30 Despite the

longevity of animation and its significance within the history of cinema, film theorists have focused on live-action motion pictures and largely ignored hand-drawn and computer-generated movies. Thomas Lamarre contends that the history, techniques, and complex visual language of animation, particularly Japanese animation, demands serious and sustained engagement, and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation, showing how anime fundamentally differs from other visual media. *The Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically “animetic” effects—the multiplanar image, the distributive field of vision, exploded projection, modulation, and other techniques of character animation—through close analysis of major films and television series, studios, animators, and directors, as well as Japanese theories of animation. Lamarre first addresses the technology of anime: the cells on which the images are drawn, the animation stand at which the animator works, the layers of drawings in a frame, the techniques of drawing and blurring lines, how characters are made to move. He then examines foundational works of anime, including the films and television series of Miyazaki Hayao and Anno Hideaki, the multimedia art of Murakami

Takashi, and CLAMP's manga and anime adaptations, to illuminate the profound connections between animators, characters, spectators, and technology. Working at the intersection of the philosophy of technology and the history of thought, Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the “animetic machine” encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us.

Celestial Being Noboru Kimura, Hajime Yodate, Yoshiyuki Tomino, 2010 The novelization of the hit anime series! The year is 2307 A.D. Although fossil fuels have been depleted, humanity has obtained a new source of energy to replace them in the form of a large-scale solar power generation system based on three huge orbital elevators. However, the benefits of this system are available only to a handful of major powers and their allies. The three orbital elevators belong to three superpower blocs. These are the Union, led by the United States of America; the Human Reform League, led by China, Russia, and India; and the AEU, led by Europe. These superpower blocs continue to play a grand zero-sum game

for the sake of their own prestige and prosperity. In this world of never-ending conflict, a private armed organization appears, dedicated to the elimination of war through armed force. Its name is Celestial Being, and it is in possession of Gundam mobile suits. With these Gundams, it begins armed intervention into all acts of war.
