Structural Biology Quincy Teng, 2012-09-06 This 2nd edition begins with an overview of NMR development and applications in biological systems. It describes recent developments in instrument hardware and methodology. Chapters highlight the scope and limitation of NMR methods. While detailed math and quantum mechanics dealing with NMR theory have been addressed in several well-known NMR volumes, chapter two of this volume illustrates the fundamental principles and concepts of NMR spectroscopy in a more descriptive manner. Topics such as instrument setup, data acquisition, and data processing using a variety of offline software are discussed. Chapters further discuss several routine strategies for preparing samples, especially for macromolecules and complexes. The target market for such a volume includes researchers in the field of biochemistry, chemistry, structural biology and biophysics.

Militarism, Hunting, Imperialism J.A. Mangan, Callum McKenzie, 2013-10-18 The late Victorian and Edwardian officer class viewed hunting and big game hunting in particular, as a sound preparation for imperial warfare. For the imperial officer in the making, the 'blooding' hunting ritual was a visible 'hallmark' of stirring martial masculinity. Sir Henry Newbolt, the period poet of subaltern self-sacrifice, typically considered hunting as essential for the creation of a 'masculine sporting spirit' necessary for the consolidation and extension of the empire. Hunting was seen as a manifestation of Darwinian masculinity that maintained a pre-ordained hierarchical order of superordinate and subordinate breeds. Militarism, Hunting, Imperialism examines these ideas under the following five sections: martial imperialism: the self-sacrificial subaltern 'blooding' the middle class martial male the imperial officer, hunting and war martial masculinity proclaimed and consolidated martial masculinity adapted and adjusted. This book was published as a special issue of the International Journal of the History of Sport.

The Statistics of Natural Selection on Animal Populations Brian F. Manly,2013-03-09 In the concluding chapter of his famous book on the theory of evolution by natural selection, Charles Darwin (1859) remarked that: When the views entertained in this volume on the origin of species, or when analogous views are generally admitted, we can dimly foresee

that there will be a considerable revolution in natural history. This proved, of course, to be completely correct. At present there is a great divergence of opinion about the general importance of natural selection in the evolutionary process. Nevertheless, biologists are, on the whole, united in their acceptance of the potential power of selection in changing populations. Given this situation, it is not surprising to find that many attempts to detect the effects of natural selection have been made since the time of Darwin. This area of study has been called ecological genetics. It involves the collection of data of various kinds and, in many cases, the development of special methods for analysing these data. This book is a summary of methods for data analysis, concentrating on those that are applicable to animal populations, particularly wild populations.

Africa's Peacemakers Adekaye Adebajo, 2014-02-13 As Africa and its diaspora commemorate fifty years of post-independence Pan-Africanism, this unique volume provides profound insight into the thirteen prominent individuals of African descent who have won the Nobel Peace Prize since 1950. From the first American president of African descent, Barack Obama, whose career was inspired by the civil rights and anti-apartheid struggles promoted by fellow Nobel Peace laureates Martin Luther King, Jr., Nelson Mandela, Desmond Tutu, and Albert Luthuli; to influential figures in peacemaking such as Ralph Bunche, Anwar Sadat, Kofi Annan, and F.W. De Klerk; as well as Ellen Johnson Sirleaf, Leymah Gbowee, Wangari Maathai, and Mohamed El-Baradei, who have been variously involved in women's rights, environmental protection, and nuclear disarmament, *Africa's Peacemakers* reveals how this remarkable collection of individuals have changed the world - for better or worse.

Origins of Biodiversity Lindell Bromham,Marcel

Cardillo,2019-04-18 This book is a unique introduction to the fields of macroevolution and macroecology, taking an enquiry-led approach to exploring the evolution and distribution of biodiversity across time, space and lineages.The only introduction to macroevolution and macroecology to adopt an innovative enquiry-led, case study-based framework to encourage active learning and critical thinking, this book:Extends the study of evolutionary biology and ecology beyond the topics covered in typical undergraduate textsExplores the nature of scientific investigation by emphasising hypothesis testing and highlighting the range of analytical tools available to contemporary researchersEncourages active student-driven learning by using open questions and current debates to promote critical thinking, identify interesting and important problems, and demonstrate how to frame testable research hypothesesCombines these three skills--an understanding of macroevolutionary and macroecological principles and patterns, a grasp of hypothesis testing, and the ability to identify important questions--to allow students to look at the world with new eyes, and develop an understanding of why the biological world is as it is.

Darwinism and Evolutionary Economics John

Laurent,John Nightingale,2001-01-01 This outstanding collection of essays by leading scholars helps explain how evolutionary economics has come of age. They show how evolutionary economics offers a progressive and diverse research agenda built on strong foundations. These are essays of lasting value. J. Stanley Metcalfe, University of Manchester, UK Darwinism is fast

becoming an orthodoxy of modern thought, a framework within which a wide range of knowledge communities conduct their discourse. Ever since its formation, Darwinian theory has experienced a close, though not always comfortable, association with economics. Evolutionary economists now appear to show little concern for the consistency of knowledge in their embrace of Darwinism. Darwinism and Evolutionary Economics brings together contributions from eminent authors who, building on Darwin's own insights and on developments in evolutionary theory, offer challenging views on how economics can use evolutionary ideas effectively. This collection of critical essays provides a thorough examination of the application of Darwinian theory to economic thought, and will appeal to evolutionary economists and all those with an interest in Darwin, innovation and evolutionary science.
