Principles and Practice of Constraint Programming - CP 2004 Mark

Wallace, 2005-01-12 The 10th International Conference on the Principles and Practice of Constraint Programming (CP 2003) was held in Toronto, Canada, during September 27 - October 1, 2004. Information about the conference can be found on the Web at <http://ai.uwaterloo.ca/~cp2004/> Constraint programming (CP) is about problem modelling, problem solving, programming, optimization, software engineering, databases, visualization, user interfaces, and anything to do with satisfying complex constraints. It reaches into mathematics, operations research, artificial intelligence, algorithms, complexity, modelling and programming languages, and many aspects of computer science. Moreover, CP is never far from applications, and its successful use in industry and government goes hand in hand with the success of the CP research community. Constraint programming continues to be an exciting, flourishing and growing research field, as the annual CP conference proceedings amply witness. This year, from 158 submissions, we chose 46 to be published in full in the proceedings. Instead of selecting one overall best paper, we picked out four "distinguished" papers - though we were tempted to select at least 12 such papers. In addition we included 16 short papers in the proceedings - these were presented as posters at CP 2004. This volume includes summaries

of the four invited talks of CP 2004. Two speakers from industry were invited. However these were no ordinary industrial representatives, but two of the leading researchers in the CP community: Helmut Simonis of Parc Technologies, until its recent takeover by Cisco Systems; and Jean Francoi s Puget, Director of Optimization Technology at ILOG. The other two invited speakers are also big movers and shakers in the research community.

Formal Methods in Computer-Aided Design Alan J. Hu, Andrew K. Martin, 2005-01-18 These are the proceedings of the fifth international conference, Formal Methods in Computer-Aided Design (FMCAD), held 15-17 November 2004 in Austin, Texas, USA. The conference provides a forum for presenting state-of-the-art tools, methods, algorithms, and theory for the application of formalized reasoning to all aspects of computer-aided system design, including specification, verification, synthesis, and testing. FMCAD's heritage dates back 20 years to some of the earliest conferences on the subject of formal reasoning and computer-aided design. Since 1996, FMCAD has assumed its present form, held biennially in North America, alternating with its sister conference CHARME in Europe. We are delighted to report that our research community continues to flourish: we received 69 paper submissions, with many more high-quality papers than we had room to accept. After a rigorous review process, in which each paper received at least three, and typically four or more, independent reviews, we accepted 29 papers for the conference and inclusion in this volume. The conference also included invited talks from

Greg Spirakis of Intel Corporation and Wayne Wolf of Princeton University. A conference of this size requires the contributions of numerous people. On the technical side, we are grateful to the program committee and the additional reviewers for their countless hours reviewing submissions and ensuring the intellectual quality of the conference. We would also like to thank the steering committee for their wisdom and guidance. On the logistical side, we thank Christa Mace for designing our website and attending to countless organizational tasks. And we thank our corporate sponsors - AMD, IBM, Intel, and Synopsys - for financial support that helped make this conference possible.

Relational Database Index Design and the Optimizers Tapio Lahdenmaki, Mike Leach, 2005-09-15 Improve the performance of relational databases with indexes designed for today's hardware Over the last few years, hardware and software have advanced beyond all recognition, so it's hardly surprising that relational database performance now receives much less attention. Unfortunately, the reality is that the improved hardware hasn't kept pace with the ever-increasing quantity of data processed today. Although disk packing densities have increased enormously, making storage costs extremely low and sequential read very fast, random reads are still painfully slow. Many of the old design recommendations are therefore no longer valid-the optimal point of indexing has come a long way. Consequently many of the old problems haven't actually gone away-they have simply changed their appearance. This book provides an easy but effective approach to the design of indexes and tables. Using lots of examples and case studies, the authors describe how the DB2, Oracle, and SQL Server optimizers determine how to access data, and how CPU and response times for the resulting access paths can be quickly estimated. This

enables comparisons to be made of the various designs, and helps you choose available choices for the most appropriate design. This book is intended for anyone who wants to understand the issues of SQL performance or how to design tables and indexes effectively. With this title, readers with many years of experience of relational systems will be able to better grasp the implications that have been brought into play by the introduction of new hardware.

The Rise of Cable Programming in the United States Megan Mullen, 2003-06-01

In 1971, the Sloan Commission on Cable Communications likened the ongoing developments in cable television to the first uses of movable type and the invention of the telephone. Cable's proponents in the late 1960s and early 1970s hoped it would eventually remedy all the perceived ills of broadcast television, including lowest-common-denominator programming, inability to serve the needs of local audiences, and failure to recognize the needs of cultural minorities. Yet a quarter century after the blue sky era, cable television programming closely resembled, and indeed depended upon, broadcast television programming. Whatever happened to the Sloan Commission's revolution now in sight? In this book, Megan Mullen examines the first half-century of cable television to understand why cable never achieved its promise as a radically different means of communication. Using textual analysis and oral, archival, and regulatory history, she chronicles and analyzes cable programming developments in the United States during three critical stages of the medium's history: the early community antenna (CATV) years (1948-1967), the optimistic blue sky years (1968-1975), and the early satellite years (1976-1995). This history clearly reveals how cable's roots as a retransmitter of broadcast signals, the regulatory constraints that stymied innovation, and the economic success of cable as an outlet for broadcast or broadcast-type programs all combined to defeat most utopian visions for cable programming.

Community Psychology in Practice James G. Kelly, Anna V. Song, 2016-04-01
Community Psychology in Practice: An Oral History Through the Stories of Five Community Psychologists is a unique examination of how community psychology evolved through the years. Five highly respected community psychologists recount their personal histories telling how they went from academia to careers disseminating principles of community psychology. Newer members to the field of psychology can trace how these leaders came to pursue careers in community psychology. As these respected experts tell their own stories in accessible narrative form, the reader gains a clear understanding of how applied community psychology intertwines with history, context, social movements, and individual personalities is revealed. Each career story in *Community Psychology in Practice: An Oral History Through the Stories of Five Community Psychologists* illustrates how societal events such as wars, economic depressions, the civil rights movement, and discrimination shaped personal philosophies and ultimately lead to their decision to become applied community psychologists and practitioners. Each contributor was asked to discuss their stories from four experiential dimensions: personal, contextual, intellectual, and ideological. The various viewpoints reveal how each one's ethnicity, gender, sexual

orientation, and academic background affected how they experienced the history of community psychology. Three eminent scholars from the fields of community psychology, history, and business psychology discuss the narratives to provide further insight. The narrative studies in *Community Psychology in Practice: An Oral History Through the Stories of Five Community Psychologists* include: Anne Mulvey John Morgan Irma Serrano-Garcia Tom Wolff Carolyn Swift. *Community Psychology in Practice: An Oral History Through the Stories of Five Community Psychologists* is an encouraging, stimulating look at community psychology that is valuable to community psychologists, historians of psychology, researchers, industrial organization (IO) psychologists, educators, and students.

Highway of Dreams A. Michael Noll, 2013-11-26 This important volume reviews the history of the telecommunication superhighway pointing out its beginnings in the interactive TV and broadband highway of the wired cities more than two decades ago. It explains the technological uncertainties of the superhighway and many of its futuristic services, and also gives an understandable review of the technological principles behind today's modern telecommunication networks and systems. Recognizing that technology is only one factor in shaping the future, the author, a well-recognized telecommunications

expert, analyzes the financial, policy, business, and consumer issues that undermine the superhighway. The book concludes by showing that today's switched telephone network and CATV systems already form a telecommunication superhighway carrying voice, data, image, and video communication for a wide variety of services that enable us to stay in contact with anyone anywhere on our planet. Highway of Dreams is written clearly with understandable explanations for nonspecialists. It challenges the technological utopia offered by the promoters of the superhighway and suggests that consumer needs, finance, corporate culture, and policy often have far greater impact on the future than technology alone.

Tube of Plenty Erik Barnouw, 1990-05-31 Based on the classic History of Broadcasting in the United States, Tube of Plenty represents the fruit of several decades' labor. When Erik Barnouw--premier chronicler of American broadcasting and a participant in the industry for fifty years--first undertook the project of recording its history, many viewed it as a light-weight literary task concerned mainly with entertainment trivia. Indeed, trivia such as that found in quiz programs do appear in the book, but Barnouw views them as part of a complex social tapestry that increasingly defines our era. To understand our century, we must fully comprehend the evolution of television and its newest extraordinary offshoots. With this fact in mind, Barnouw's new edition of Tube of Plenty explores the development and impact of the latest dramatic phases of the communications revolution. Since the first publication of this invaluable history of television and how it has shaped, and been shaped by, American culture and society, many significant changes have occurred. Assessing the importance of these developments in a new chapter, Barnouw

specifically covers the decline of the three major networks, the expansion of cable and satellite television and film channels such as HBO (Home Box Office), the success of channels catering to special audiences such as ESPN (Entertainment and Sports Programming Network) and MTV (Music Television), and the arrival of VCRs in America's living rooms. He also includes an appendix entitled questions for a new millennium, which will challenge readers not only to examine the shape of television today, but also to envision its future.
