Neural Network Models of Conditioning and Action Michael L. Commons,Stephen Grossberg,John Staddon,2016-09-19 Originally published in 1991, this title was the result of a symposium held at Harvard University. It presents some of the exciting interdisciplinary developments of the time that clarify how animals and people learn to behave adaptively in a rapidly changing environment. The contributors focus on aspects of how recognition learning, reinforcement learning, and motor learning interact to generate adaptive goal-oriented behaviours that can satisfy internal needs – an area of inquiry as important for understanding brain function as it is for designing new types of freely moving autonomous robots. Since the authors agree that a dynamic analysis of system interactions is needed to understand these challenging phenomena – and neural network models provide a natural framework for representing and analysing such interactions – all the articles either develop neural network models or provide biological constraints for guiding and testing their design.

**Community-based Control of Invasive Species** Theodore Alter,Paul Martin,Don Hine,Tanya Howard,2019-06-01 Invasive species are among the greatest challenges to environmental sustainability and agricultural productivity in the world. One of the most promising approaches to managing invasive species is voluntary citizen stewardship. However, in order for control measures to be effective, private citizens often need to make sustained and sometimes burdensome commitments. Community-Based Control of Invasive Species is based on five years of research by leading scholars in natural resource and human behavioural sciences, which involved government and citizen groups in Australia and the United States. It examines questions including, 'how can citizens be engaged in voluntarily managing invasive species?', 'what communication strategies will ensure good motivation and coordination?' and 'how can governing bodies support citizens in their efforts?'. With chapters on institutional frameworks, changing governance, systems thinking, organisational learning, engagement, communication and behavioural change, this book will be a valuable reference for researchers and practitioners involved in natural resources management.

**Pulling a Rabbit Out of a Hat** Ross Anderson,2019-05-23 Who Framed Roger Rabbit emerged at a nexus of people, technology, and circumstances that is historically, culturally, and aesthetically momentous. By the 1980s, animation seemed a dying art. Not even the Walt Disney Company, which had already won over thirty Academy Awards, could stop what appeared to be the end of an animation era. To revitalize popular interest in animation, Disney needed to reach outside its own studio and create the distinctive film that helped usher in a Disney Renaissance. That film, Who Framed Roger Rabbit, though expensive and controversial, debuted in theaters to huge success at the box office in 1988. Unique in its conceit of cartoons living in the real world, Who Framed Roger Rabbit magically blended live action and animation, carrying with it a humor that still resonates with audiences. Upon the film’s release, Disney’s marketing program led the audience to believe that Who Framed Roger Rabbit was made solely by director Bob Zemeckis, director of animation Dick Williams, and the visual effects company Industrial Light & Magic, though many Disney animators contributed to the project. Author Ross Anderson interviewed over 140 artists to tell the story of how they created something truly magical. Anderson describes the ways in which the Roger Rabbit characters have been used in film shorts, commercials, and merchandising, and how they have remained a cultural touchstone today.

**Motivation, Emotion, and Goal Direction in Neural Networks** Daniel S. Levine,Samuel J. Leven,2014-01-14 The articles gathered in this volume represent examples of a unique approach to the study of mental phenomena: a blend of theory and experiment, informed not just by easily measurable laboratory data but also by human introspection. Subjects such as approach and avoidance, desire and fear, and novelty and habit are studied as natural events that may not exactly correspond to, but at least correlate with, some (known or unknown) electrical and chemical events in the brain.
