The Medical Basis of Psychiatry S. Hossein Fatemi,Paula J. Clayton,2016-03-17 Four years have passed since the last edition (3rd) of this book was published. In the intervening years, several reviews of this book have provided highly encouraging remarks about the value of this book in transmitting information on classification and treatment of psychiatric disorders to the audience. We are proposing to revise all chapters with an eye on accuracy and ease of use, and this is an especially timely endeavor with the upcoming publication of the Diagnostic and Statistical Manual V. All the appropriate new information on biology, etiology, diagnosis and treatment of psychiatric disorders will be added to the current proposed edition. It is our goal to recruit the same authors (if possible) who contributed to the previous edition. While all chapters will be updated (see TOC), those marked by asterisks will be the most likely to undergo more revision. Psychiatry has emerged as a burgeoning scientific field with major advances in etiology and treatment of several disorders. Just as there was excitement in the anatomic advances that took place a hundred years ago when Emil Kraepelin and his collaborators took on the enormous task of classification of psychiatric disorders based on rational scientific thinking, new advances in genetics, biochemistry, neuroanatomy and pharmacotherapy of mental disorders have brought us even closer to a better understanding of complex disorders like schizophrenia, bipolar disorder, depression and even autism. The major goal of the previous edition of this classic book was to update the busy clinician, psychiatric resident and medical student with the most up-to-date information on etiology, diagnosis and treatment of psychiatric disorders. This goal remains the focus of the fourth edition of this book. In this updated and expanded edition, the reader will be provided with the most contemporary information and literature supported by a close survey of the field. This new edition of this classic title, with its focus on biologic and medical aspects of psychiatry, will continue to be of significant help to all interested in the scientific practice of psychiatry.

Roller Coaster World Kenneth Bulmer,2011-09-29 Parsloe's Planet was in its death throes. A world of mobile cities, the populace had moved frantically from radiation site to radiation site - for without this life-giving radiation the inevitable result would be insanity and death. Now the radiation was failing. Soon it would be no more. The planet was going to die. But into the chaos and agony of the dying planet comes Douglas Marsden: an outcast, a renegade - and the only man who can save the stricken world.

American Dirt Track Racer Joe Scalzo, One of the most evocative eras in the history of American motorsport was the golden age of dirt-track racing, when hairy-knuckled drivers duked it out in open-wheel racers on half-mile ovals around the country. This photographic history spans the classic era from 1946 to 1970, featuring vintage photography of the Champ and Sprint cars that were driven by men like A.J. Foyt, Parnelli Jones, Roger Ward and Bobby Unser for very little monetary reward. The technologies of the most successful and unusual cars are discussed as are specific races, circuits and some of the more colorful personalities of the period. Midget and track roadsters are also featured, along with period color photography.

Element-Doped Functional Carbon-Based Materials Sergio Morales-Torres, Agustín F. Pérez-Cadenas, Francisco Carrasco-Marín, 2020-01-28 Carbon materials are one of the most fascinating materials because of their unique properties and potential use in several applications. They can be obtained from residues or by using advanced synthesis technologies like chemical vapor deposition. The carbon family is very broad, ranging from classical activated carbons to more advanced species such as carbon nanotubes and graphene. The surface chemistry is one of the most interesting aspects of this broad family of materials, which allows the incorporation of different types of chemical functionalities or heteroatoms on the carbon surface, such as O, N, B, S, or P, which can modify the acid-base character, hydrophobicity/hydrophilicity, or the electronic properties of these materials and, thus, determine the final application. This book represents a collection of original research articles and communications focused on the synthesis, properties, and applications of heteroatom-doped functional carbon materials.

The Physics and Applications of High Brightness Electron Beams James Rosenzweig, Gil Travish, Luca Serafini, 2003-12-18 This book contains the contributions to the Workshop on the Physics and Applications of High Brightness Electron Beams, held in July 2002 in Sardinia, Italy. This workshop had a broad international representation from the fields of intense electron sources, free-electron lasers, advanced accelerators, and ultra-fast laser-plasma, beam-plasma and laser-beam physics. The interdisciplinary participants were brought together to discuss advances in the creation and understanding of ultra-fast, ultra-high brightness electron beams, and the unique experimental opportunities in frontier high-energy-density and radiation-source physics which are offered by these scientific tools. The proceedings have been selected for coverage in: • Index to Scientific & Technical Proceedings® (ISTP® / ISI Proceedings) • Index to Scientific & Technical Proceedings (ISTP CDRom version / ISI Proceedings) Contents: What Brightness Means (C A Brau) 6D Phase Space Measurements at the SLAC Gun Test Facility (J F Schmerge et al.) Laser Science and Technology A.N. Chester, V.S. Letokhov, S. Martellucci, 2012-12-06 The conference Laser Science and Technology was held May 11-19, 1987 in Erice, Sicily. This was the 12th conference organized by the International School of Quantum Electronics, under the auspices of the Ettore Majorana Center for Scientific Culture. This volume contains both the invited and contributed papers presented at the conference, covering current research work in two areas: new laser sources, and laser applications. The operation of the first laser by Dr. Theodore Maiman in 1960 initiated a decade of scientific exploration of new laser sources. This was followed by the decade of the 1970s, which was characterized by technology push in which the discoveries of the 1960s were seeking practical application. In the 1980s we are instead seeking applications pull, in which the success and rapid maturing of laser applications provides both inspiration and financial resources to stimulate additional work both on laser sources and applications. The papers presented in these Proceedings attest to the great vitality of research in both these areas: New Laser Sources. The papers describe current developments in ultra violet excimer lasers, X-ray lasers, and free electron lasers. These new lasers share several characteristics: each is a potentially important coherent source; each is at a relatively short wavelength (below 1 micrometer); and each is receiving significant development attention today.
