Agreeable Agreement Minna Hietamäki,2010-04-22 In recent bilateral ecumenical dialogue the aim of the dialogue has been to reach some form of doctrinal consensus. The three major chapters of the book discuss the variety of forms of doctrinal consensus found in ecumenical dialogues among Anglicans, Lutherans and Roman Catholics. In general, the dialogue documents argue for agreement/consensus based on commonality or compatibility. Each of the three dialogue processes has specific characteristics and formulates its argument in a unique way. The Lutheran-Roman Catholic dialogue has a particular interest in hermeneutical questions and proposes various forms of differentiated or perspectival forms of consensus. The Anglican-Roman Catholic dialogue emphasises the correctness of interpretations. The documents consciously look towards a common future, not the separated past.

Oil Crisis Colin John Campbell,2005 Colin Campbell is renowned for his lucid earlier work, 'The coming oil crisis'. Eight years on, events have proved his analysis right. Now, he argues that the oil crisis has come. The familiar technical explanation of the crisis is carefully made again : essentially, that there is no more oil to be found. That fact is beginning to manifest itself in heightened competition for the remaining resource ; which is why America invaded Iraq ; why Central Asia is in turmoil ; why oil is persistently priced above \$50/barrel (and why Goldman Sachs think \$100 a barrel is not too unlikely in the near future). The problem - of an oil-less world - is beyond the grasp of politicians. They can fiddle with ideas about renewables or hydrogen but they, along with most of humanity, have not really grasped that it is the oil economy that enables about a 7 billion world population to be sustained. A wholly new world is imminent. It is not likely to be very pleasant. Dr Campbell outlines our grim future. -- book cover.

Water Hammer in Pipe-Line Systems J. Záruha,1993-05-05 The physical principles of water hammer are explained in this volume. The basic mathematical methods of solution of water hammer and ways of limiting its effects are covered. Detailed description is given of the method of characteristics and the corresponding programs for personal computers, which enables solution of water hammer in a wide variety of hydraulic systems encountered in practice. Examples are given of solution of water hammer of common pipe-line systems as well as calculation of the steady state of flow, the determination of discharge through a pipe-line, measurements of characteristics of valves, pumps, turbines, determination of the operating régime of a valve in order to ensure a desired pressure and discharge curve, etc. This book will be of interest to those civil, mechanical and petroleum engineers dealing with the design and operation of hydraulic systems.

Energy, Waste and the Environment R. Gieré,Peter Stille,2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science-related topic. The main focus is on geochemical concepts in immobilizing, isolating or neutralizing waste derived from energy production and consumption. The book also addresses the issue of using some types of energy-derived waste as alternative raw materials. Moreover, it highlights research on how certain wastes can be used for energy production, an increasingly important aspect of modern integrated waste management strategies. The main objectives are to: (a) identify the most serious environmental problems related to various types of power generation and associated waste accumulation; (b) present strategies, based on natural analogue materials, for the immobilization of toxic and radioactive waste components through mineralogical barriers; (c) discuss modern procedures for reuse of waste or certain waste components; and (d) review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment.

Nanotechnology Geoffrey Hunt,Michael Mehta,2013-06-17 Nanotechnology - technology at the molecular level - is held out by many as the Holy Grail for creating a trillion dollar economy and solving problems from

curing cancer to reprocessing waste into products and building superfast computers. Yet, as with GMOs, many view nanotech as a high risk genie in a bottle that once uncorked has the potential to cause unpredictable, perhaps irreversible, environmental and public health disasters. With the race to bring products to market, there is pressing need to take stock of the situation and to have a full public debate about this new technological frontier. Including contributions by renowned figures such as Roland Clift, K. Eric Drexler and Arpad Pusztai, this is the first global overview of the state of nanotech and society in Europe, the USA, Japan and Canada, examining the ethics, the environmental and public health risks, and the governance and regulation of this most promising, and potentially most dangerous, of all technologies.
