The Climatic, Biotic and Tectonic Evolution of the Paleogene Renova Formation of Southwestern Montana Kevin John Lielke,2012 The Renova Formation of southwestern Montana contains an important record of Paleogene floral, faunal, climate and tectonic change in the northern Rocky Mountains. The period between the end of the early Eocene and the early Oligocene (~49-32 Ma) was a time of rapid and far-reaching climate change. This period saw the end of global greenhouse climate and the establishment of icehouse conditions across the Earth. These changes led to profound alterations in both marine and terrestrial ecosystems. This study examines the late Eocene/early Oligocene history of the northern Rocky Mountains by means of an integrated study of the sedimentology, tectonics and fossil content of the Renova Formation. The first part of this study examines plant fossils found in the Renova Formation in order to examine changes in the composition of the vegetation across the late Eocene/ early Oligocene (E/O) boundary. Plant remains are an effective proxy for climate and are used to estimate multiple climatic parameters across the E/O boundary. The second part of this study examines the paleotopography and paleodrainage patterns of the basins which accumulated the Renova sediments. This is accomplished by a combination of sedimentary facies and detrital zircon analysis. The third part of this study examines the tectonic underpinnings of Paleogene southwestern Montana through a combination of geologic field work and geodynamic modeling. The results of this study indicate that a seasonal summer dry climate became established in the northern Rocky Mountains by early Oligocene time. This is indicated by the elimination of subtropical plant species, the establishment of dry-adapted species and by paleoclimate parameters calculated from leaf physiognomy. Geodynamic calculations and field data indicate that the Renova Formation was deposited in a series of sub-basins separated by relict paleotopography and inverted topography formed by contemporary lava flows. Normal faulting was not active until the middle Miocene initiation of regional extension. Accommodation space for the deposition of Renova sediments was formed primarily by differential erosion of pre-middle Eocene rocks. Climate change and influx rates of volcanoclastic sediment were also important controls on the evolution of the intermontane basins of southwestern Montana.

**Retinoids** C.E. Orfanos,O. Braun-Falco,E.M. Farber,C. Grupper,M.K. Polano,R. Schuppli,2012-12-06 With the aromatic retinoic acid analog Tigason oral and intravenous pharmacokinetic studies have been performed in 5 normal volunteers. Simultaneous fitting of single i. v. and oral data to a three-compartment model assuming first-order absorption was possible. Using Nonlin parameter estimates of the single-dose data, one is able to predict the decline in plasma levels of parent drug following cessation of a 10 days multiple dosing regimen up to 24 hours. The model is however unable to predict a phase of prolonged elimination observed beyond 24 hours. Moreover in 5 patients, who underwent chronic therapy (8-15 months), substantial plasma levels of both unchanged drug and main metabolite (corresponding carboxylic acid) were observed up to 140 days after cessation of the therapy. An apparent half-life of elimination of 80-100 days can be calculated. The drug appears to be stored at some yet unknown storage site. Investigation of metabolism of Tigason in rats and humans revealed 19 different bio transformation products thus far, most of them appearing in the urine in low amounts (20% of dose). A few of them (mainly the acid Ro 10-1670) after conjugation to glucuronic acid are excreted in the bile in high amounts (60-80% of dose). No drug appeared unchanged in the excreta after i. v. administration to rats. References 1. Bollag W (1971) Effects of vitamin A acid (NSC-122758) on transplantable and chemically-induced tumors. The Biochemistry of Retinoic Acid Receptors I: Structure, Activation, and Function at the Molecular Level Mary Ann Asson-Batres,Cécile Rochette-Egly,2014-06-24 A role for vitamin A in living organisms has been known throughout human history. In the last 100 years, the biochemical nature of vitamin A and its active derivative, retinoic acid, its physiological impact on growth processes and the essential details of its mechanism of action have been revealed by investigations carried out by

researchers using vertebrate and more recently invertebrate models to study a multiplicity of processes and conditions, encompassing embryogenesis, postnatal development to old age. A wealth of intercellular interactions, intracellular signaling systems and molecular mechanisms have been described and the overall conclusion is that retinoic acid is essential for life. This book series, with chapters authored by experts in every aspect of this complex field, unifies the knowledge base and mechanisms currently known in detailed, engaging, well-illustrated, focused chapters that synthesize information for each specific area. In view of the recent explosion in this field, it is timely to publish a contemporary, comprehensive, book series recapitulating the most exciting developments in the field and covering fundamental research in molecular mechanisms of vitamin A action, its role in physiology, development and continued well-being and the potential of vitamin A derivatives and synthetic mimetics to serve as therapeutic treatments for cancers and other debilitating human diseases. VOLUME I: Here, we present the first volume of a multi-volume series on Retinoic Acid Signaling that will cover all aspects of this broad and diverse field. One aim of Volume I is to present a compilation of topics related to the biochemistry of nuclear retinoic acid receptors, from their architecture when bound to DNA and associated with their coregulators to their ability to regulate target gene transcription. A second aim is to provide insight into recent advances that have been made in identifying novel targets and non-genomic effects of retinoic acid. Volume I is divided into ten chapters contributed by prominent experts in their respective fields. Each chapter starts with the history of the area of research. Then, the key findings that contributed to development of the field are described, followed by a detailed look at key findings and progress that are being made in current, ongoing research. Each chapter is concluded with a discussion of the relevance of the research and a perspective on missing pieces and lingering gaps that the author recommends will be important in defining future directions in vitamin A research.

**Meditação da Mulher 2013 Renova-me** Diversas Autoras, 2019-07-03 Ao longo da história e em todas as culturas, a mulher tem assumido a responsabilidade de nutrir seu lar e sua comunidade. Essa tarefa vital pode fazer com que nos sintamos esgotadas, vazias, sem nada mais para oferecer. Deus, porém, prometeu renovar nossas forças, nosso ânimo e nossa vida. Um novo dia representa um novo começo, e com um novo começo vêm o frescor e o vigor. Passe alguns momentos cada dia em comunhão com Deus e com aproximadamente 300 mulheres que, ao redor do mundo, já experimentaram essa renovação. Por intermédio dEle e desse vasto grupo de mulheres, sintam-se restauradas e revigoradas. Encontre forças para começar outra vez, até aquele dia em que se tornar perfeita em santidade. Ardis Dick Stenbakken, organizadora deste devocional, vem dedicando seu tempo ao Ministério da Mulher há muitos anos. Porém, agora sente que sua maior paixão é a geração seguinte, de modo especial seus netos. Também valoriza o tempo que pode passar com o esposo, Dick. Ardis gosta de incentivar as mulheres para que usem os dons que Deus lhes deu e estudem sobre as mulheres da Bíblia, aprendendo como Deus lhes dirigiu a vida e o que isso significa para as mulheres de hoje.

**Modulation of Cellular Interactions by Vitamin A and Derivatives (retinoids)** Luigi M. De Luca, Stanley S. Shapiro, 1981 Abstract: The proceedings of a 1980 technical conference concerning the modulation of cellular interactions by vitamin A and its derivatives are presented. Over 50 papers are included; major areas of research are: chemistry and in vivo studies; retinoid metabolism; retinoid-binding proteins; cellular interaction; biochemical models; and miscellaneous related studies. Rationale for the research derives from the observation that a major physiological role of vitamin A is to maintain normal phenotypic expression of epithelial tissues, which, in deficiency, undergo processes of squamous metaplasia and keratinization. Such processes also occur as a result of exposure to certain chemical

carcinogens. Some retinoids have been demonstrated as effective protection agents of chemical carcinogenesis. Retinoids have also been observed to alter cell surface properties of neoplastically-transferred cells. The material is presented to provide a useful resource for future research in cell biology as related to the biochemical and biological roles of vitamin A and its derivatives. (wz).
