

Republic F 84 Thunderjet

David R. McLaren

Republic F-84 Ken Neubeck, 2020-08-28 The F-84 Thunderjet was the US Air Force's main strike aircraft during the Korean War and was used primarily in ground attack operations. Manufactured by the Republic Aviation Corporation, the straight-winged XP-84 prototype's first flight was in 1946; however, problems were discovered within the new field of jet flight, including engine performance and structural problems. As a result, there was a sequence of model changes, with improvements to the engine and structure, beginning with the F-84B and followed by the F-84C, which was phased out of operational service by 1952. The F-84D saw significant improvement in engine performance and was followed by the F-84E and the F-84G models, with all three models seeing heavy action in the Korean War. The F-84F Thunderstreak was a swept-wing version that came after the Korean War and was faster than the original F-84 Thunderjet. The Thunderflash was the reconnaissance version of the F-84F.

Republic F-84, Thunderjet, Thunderstreak and Thunderflash David R. McLaren, 1998 The Republic Aviation Corporation F-84 series, the Thunderjet, Thunderstreak, and Thunderflash was the United States Air Forces' first Post World War II jet fighter. As a somewhat sad result of this, it has been ignored by most aviation historians and aficionados. It was not the Air Forces' first operational jet fighter, as that honor went to the Lockheed F-80 which was created during World War II. And it did not receive the glory of the North American Aviation F-86, which followed it in sequence and was more photogenic, faster, and more involved in the glory of aerial combat. Nevertheless, the F-84 performed its unheralded role in a true yeoman fashion. It, and its pilots and groundcrews, fought the air-to-mud role as a fighter bomber in Korea. It served as an interceptor, and in photo reconnaissance. It was the first jet fighter to be operationally capable of air refueling, and it was the first to be able to deliver a

nuclear weapon. 4300 of the straight-wing F-84s were built, along with 2713 of the swept-wing F-84Fs, and 715 of the reconnaissance RF-84Fs. Almost 8000 unrecognized fighters, of which half of those produced served as a deterrent to enemy forces during the Cold War while being flown by friendly foreign countries.

F-84 Thunderjet Hugh Harkins, 2013-10 This volume is designed as an overview of the description and USAF service use of the F-84. In some cases data may conflict with other published data. However, all technical and operational data comes from manufacturers and operators records. In some cases varying technical data may be noted for a single variant such as engine type and power output. This could occur for a number of reasons such as a single variant using different engine models. Other reasons for this may be that often manufacturer's figures conflicted with operators figures for power output of a given engine variant. While no US designed jet aircraft saw operational service during World War II, many would be employed in the 1950 - 1953 Korean War, including the Republic F-84 and the earlier Lockheed F-80, both of which were employed in large numbers. The F-84 was designed during the latter stages of World War II, known then as the XP-84 (The USAF changed from the 'P' for Pursuit to the 'F' for Fighter designation in 1948). The aircraft was redesigned and did not fly until 26 February 1946, with the first production variant, the P-84B (later F-84B) attaining an Initial Operational Capability in December 1947. Designed primarily as a fighter, the introduction of more advanced fighters like the North American F-86 Sabre and the fielding by the Communist Air Forces of the swept wing MiG-15 saw the F-84 quickly outclassed in the air to air arena during the Korean War, which began on 29 June 1950, lasting until 27 July 1953. F-84's were deployed to Korea in November 1950, primarily as escort fighters protecting Boeing B-29 Superfortress Bombers. However, bomber losses to MiG's led to the USAF abandoning the daylight bombing role for the B-29,

after which, F-84's increasingly moved more and more to the air to surface role.

F-84 Thunderjet Units over Korea Warren Thompson, 2000-06-25 The straightwinged F-84 traces its lineage back to the heavyweight World War II P-47 Thunderbolt. It was among the most colourful aircraft to see action in Korea and the book features many photos from the author's private collection as well as specially commissioned cutaway illustrations.

To Fly and Fight Clarence E. "Bud" Anderson, 2017-05-12 Bud Anderson is a flyers flyer. The Californians enduring love of flying began in the 1920s with the planes that flew over his fathers farm. In January 1942, he entered the Army Air Corps Aviation Cadet Program. Later after he received his wings and flew P-39s, he was chosen as one of the original flight leaders of the new 357th Fighter Group. Equipped with the new and deadly P-51 Mustang, the group shot down five enemy aircraft for each one it lost while escorting bombers to targets deep inside Germany. But the price was high. Half of its pilots were killed or imprisoned, including some of Buds closest friends. In February 1944, Bud Anderson, entered the uncertain, exhilarating, and deadly world of aerial combat. He flew two tours of combat against the Luftwaffe in less than a year. In battles sometimes involving hundreds of airplanes, he ranked among the groups leading aces with 16 aerial victories. He flew 116 missions in his old crow without ever being hit by enemy aircraft or turning back for any reason, despite one life

or death confrontation after another. His friend Chuck Yeager, who flew with Anderson in the 357th, says, In an airplane, the guy was a mongooosethe best fighter pilot I ever saw. Buds years as a test pilot were at least as risky. In one bizarre experiment, he repeatedly linked up in midair with a B-29 bomber, wingtip to wingtip. In other tests, he flew a jet fighter that was launched and retrieved from a giant B-36 bomber. As in combat, he lost many friends flying tests such as these. Bud commanded a squadron of F-86 jet fighters in postwar Korea, and a wing of F-105s on Okinawa during the mid-1960s. In 1970 at age 48, he flew combat strikes as a wing commander against communist supply lines. To Fly and Fight is about flying, plain and simple: the joys and dangers and the very special skills it demands. Touching, thoughtful, and dead honest, it is the story of a boy who grew up living his dream.

Lockheed P-80/F-80 Shooting Star David R. McLaren,1996 The Lockheed P-80/F-80 Shooting Star was the first American operational jet fighter. David McLaren's new book chronicles the development and early trials of the aircraft during Lockheed's groundbreaking attempts to create a viable jet fighter, in a period when jet propulsion was still an innovative unknown. This period also saw engineers and test pilots like Kelly Johnson and Tony LeVier facing many challenges, incidents and accidents as they attempted to create a new fighter from yet untested aerodynamic theories, and engines that were still under development. Also discussed are the record breaking transcontinental and absolute speed records set by the Shooting Star. Detailed analysis of the Shooting Star's combat record in Korea shows why the F-80 flew more combat missions than any aircraft in the war theater. Also presented is a summation of all USAF, USAFR, and foreign countries that flew the P-80/F-80. David McLaren is also the author of Lockheed F-94 Starfire(with Marty Isham), and Beware the

Thunderbolt!: The 56th Fighter Group in World War II (both titles are available from Schiffer Publishing Ltd.).

Within limits: The United States Air Force and the Korean War Wayne Thompson, Bernard C. Nalty, 1999 Despite American success in preventing the conquest of South Korea by communist North Korea, the Korean War of 1950-1953 did not satisfy Americans who expected the kind of total victory they had experienced in World War II. In that earlier, larger war, victory over Japan came after two atomic bombs destroyed the cities of Hiroshima and Nagasaki. However, in Korea five years later, the United States limited itself to conventional weapons. Even after Communist China entered the war, Americans put China off-limits to conventional bombing as well as nuclear bombing. Operating within these limits, the U.S. Air force helped to repel two invasions of South Korea while securing control of the skies so decisively that other United Nations forces could fight without fear of air attack. This book tells the story of those limits from Invasion to Air Pressure as part of the Air Force's Fiftieth Anniversary Commemorative Edition.

Flying Aircraft Carriers of the USAF Brian Lockett, 2008-09-11 Project FICON (Fighter conveyor): In the early 1950s, the Air Force conducted a series of experiments to establish the feasibility of carrying, launching, and retrieving jet reconnaissance airplanes from giant Convair RB-36 bombers. It was hoped that the bombers would carry the reconnaissance jets to the perimeter of the Soviet Union and then release them to penetrate the air defenses. Tests of the concept were conducted in 1952 and 1953 with a Republic F-84E Thunderjet and the YF-84F Thunderstreak prototype. Twenty-six Republic RF-84F Thunderflashes and ten Convair GRB-36D carriers were

modified for the project. In 1955, a squadron of carriers was established at Fairchild Air Force Base, Washington. A squadron of parasites was established at nearby Larson Air Force Base. Training operations began in December 1955, but the composite aircraft system faced competition from the Boeing RB-52B, Lockheed U-2, and the development of aerial refueling.

Thud Ridge Jack Broughton, Hanson Baldwin, 2006 This is the story of a special breed of warrior, the fighter-bomber pilot; the story of valiant men who flew the F-105 Thunderchief 'Thud' Fighter-Bomber over the hostile skies of North Vietnam. From the briefing rooms to the bombing runs, Vice-Wing Commander Colonel Jack Broughton, recounts the tragedy and heartache, the high drama and flaming terror, the exhilaration and thrill of life on the edge. He relives the incredible feeling of high-speed, low-level sorties where SAM missiles, flak and MiGs were all in a day's work. The bravery of the pilots and their commitment to each other in times of extreme fear, crisis and catastrophe are highlighted by vivid, fast moving flying sequences. Thud Ridge is a fascinating and graphic memorial to the courage of the men, the power of their machines and their dedication to their mission.

Flying American Combat Aircraft Robin Higham, 2005 Riveting accounts from the pilots who flew such planes as the F-15, B-52, C-130, and many more. Dozens of in-the-cockpit photos. This sequel to *Flying American Combat Aircraft* of World War II spans the Cold War, taking a look at the planes that defined the era and fought in places like Korea and Vietnam. Covering all manner of aircraft—including fighters, bombers, and transports—seasoned pilots tell what it was really like to be in the cockpit of some of the world's classic planes.

Rise and Defend Duncan Curtis, 2006 Taken over by the United States Air Force in 1950 due to the developing Cold War, the ex-RAF station at Manston in Kent served as a forward air base from which American aircraft could be deployed to meet the threat of incoming Soviet bombers.

Buzz Numbers Peter M. Bowers, David W. Menard, 2006 The Buzz Number system, the famous identification system for U.S. Army and U.S. Air Force aircraft from late 1945 into the mid-1960s, was developed as a deterrent to 8th Air Force pilots engaged in unauthorized low-level flying over post-war Europe. This practice, called 'buzzing', prompted the need for ground observers to be able to identify and report a particular offending aircraft. In response to this need, a system of letters and numbers was developed to uniquely identify each aircraft in inventory. This book includes an in-depth explanation of the buzz number system as well as its many applications. This book is the ultimate buzz number reference for modelers and aviation enthusiasts.

A10 Thunderbolt II Ken Neubeck, 2019-06-03 The Fairchild Republic A-10 Thunderbolt II, commonly nicknamed the Warthog due to its unusual and ungainly appearance, became the most effective close-air-support aircraft that has ever served for the US Air Force and Air National Guard. Designed around the GAU-8/A Avenger autocannon, the aircraft was a highly effective tank killer during Operation Desert Storm. The Warthog continues to serve, from its first appearance in 1976 through subsequent wars up to the present time, and well into the future. This concise, illustrated book covers the construction, development, and combat history of this unusual aircraft and features superb detail and combat photography. Part of the Legends of Warfare series.
