Handbook of Respiratory Protection LeeAnn Racz, Dirk P. Yamamoto, Robert M. Eninger, 2017-11-22
Respiratory protection includes devices and management techniques for keeping people safe from hazardous materials. This handbook presents the state-of-the-art in respiratory protection technology as well as best management practices for work centers. Included are topics relevant to industry, government, and healthcare that provide guidance and tools for ensuring the best possible protection for workers. Most books on this topic are at least 20 years old. Research, technology and management techniques have advanced over the past two decades. This new handbook is needed to provide updated information relevant to today's occupational needs for industrial hygiene and safety professionals.

Practical Guide to Respirator Usage in Industry

Gyan Rajhans, Bhawani Pathak, 2002-11-18 This new edition outlines the design and implementation of an effective respiratory protective equipment program for industries in which workers are at risk from inhaled particulates, toxins and other hazardous materials. The book is intended for managers, health and safety committees, safety specialists and occupational health professionals who need the most up-to-date and practical advice in a concise and easy to read step-by-step form rather than an abstract and theoretical reference on the subject. As in the first edition, the authors present individual components of a respiratory protection program by including chapters on the respiratory tract and how toxic substances affect the lung, different respirator types and their limitations, the criteria for selection, fitting, supervision, training, cleaning, administration and medical assessment, advice on how to set up an RPE (respiratory protection equipment) program, and case studies to illustrate the need of an effective RPE program in the workplace. An impressive number of new research and application related publications have been reviewed since the publication of the first edition. The references (including relevant web sites) and abstracts of these publications have been included to help the reader select appropriate resources for further reading. Experts guide you through the complex data presented to industries by OSHA, NIOSH, ANSI, BSI and other health and safety standards setting organizations and equipment manufacturers Saves time and effort in searching official OEM literature Several case studies to illustrate the improper respirator selections and resulting detrimental effects

The Use and Effectiveness of Powered Air Purifying Respirators in Health Care Institute of

Medicine, Board on Health Sciences Policy, 2015-05-07 Protecting 18 million United States health care workers from infectious agents – known and unknown – involves a range of occupational safety and health measures that include identifying and using appropriate protective equipment. The 2009 H1N1 influenza pandemic and the 2014 Ebola virus outbreak in West Africa have called raised questions about how best to ensure appropriate and effective use of different kinds of personal protective equipment such as respirators, not only to promote occupational safety but also to reduce disease transmission. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care is the summary of a workshop convened by the Institute of Medicine Standing Committee on Personal Protective Equipment for Workplace Safety and Health to explore the current state of practices and research related to powered air purifying respirator (PAPRs) and potential updates to performance requirements. Presentations and discussions highlighted current health care practices using PAPRs and outlined the research to date on the use and effectiveness of PAPRs in health care settings with a focus on the performance requirements. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care focuses on efficacy, current training, maintenance, supplies, and possible enhancements and barriers to use in inpatient, clinic, nursing home, and community (home) settings. This report also explores the strengths and weaknesses of using various approaches to health care PAPR standards.

Reusable Elastomeric Respirators in Health Care
National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on the Use of Elastomeric Respirators in Health Care, 2019-03-15

Protecting the health and safety of health care workers is vital to the health of each of us. Preparing for and responding to a future influenza pandemic or to a sustained outbreak of an airborne transmissible disease requires a high-level commitment to respiratory protection for health care workers across the wide range of settings in which they work and the jobs that they perform. Keeping health care workers healthy is an ethical commitment both in terms of addressing the occupational risks faced by health care workers and of providing for the continuity of patient care and services needed to maintain the health of individuals and communities. During a public health emergency, challenges will arise concerning the availability of respiratory protective devices (i.e., respirators). Reusable respirators (specifically, reusable half-facepiece elastomeric respirators) are the standard respiratory protection device used in many industries, and they provide an option for use in health care that has to date not been fully explored. The durability and reusability of elastomeric respirators make them desirable for stockpiling for emergencies, where the need for large volumes of respirators can be anticipated. However, they are used infrequently in health care. Reusable Elastomeric Respirators in Health Care explores the potential for the use of elastomeric respirators in the U.S. health care system with a focus on the economic, policy, and implementation challenges and opportunities. This report examines the practicability of elastomeric use in health care on a routine basis and during an influenza pandemic or other large aerosol-transmissible outbreak, when demand for respiratory protective devices by U.S. health care personnel may be larger than domestic supplies. The report also addresses the issues regarding emergency stockpile management of elastomeric respiratory protective

devices.

Measuring Respirator Use in the Workplace

National Research Council, Committee on National Statistics, Division of Behavioral and Social Sciences and Education, Board on Chemical Sciences and Technology, Division on Earth and Life Studies, Committee on the Review of the National Institute of Occupational Safety and Health/Bureau of Labor Statistics Respirator Use Survey, 2007-06-21 Respirators are used in a variety of workplaces including emergency response, mining operations, construction, manufacturing, and hospitals. In 2001, National Institute of Occupational Safety and Health (NIOSH) and Bureau of Labor Statistics commissioned a nationwide survey of respirator use in the workplace, the results of which were published in the 2003 report Respirator Usage in Private Sector Firms. The purpose of the survey was to evaluate respirator use and practices, including training practices and the value of respirator manufacturer's instruction, in order to help guide NIOSH respirator certification and research. This National Research Council (NRC) report evaluates the survey in terms of several measures such as the adequacy and appropriateness of the survey instrument, the survey methodology, data analysis, and the conclusions drawn from the data. The NRC report finds that the survey was an important first step in collecting respiratory protection data from a probability sample but that several improvements could be made in survey design and analysis. Based on the review of the survey, the NRC report concludes that data on respirator use would be best provided by employers and employees in the context of the work setting.

Respirator Studies for the Nuclear Regulatory Commission Alan Hack, O. D. Bradley, Andres Trujillo, 1978 This report describes the work performed during FY 1977 for the Nuclear

Regulatory Commission. The Protection Factors (efficiency) provided by 15 NIOSH approved supplied-air respirators were determined while the devices were worn by a panel of anthropometrically selected test subjects. The major recommendation was that demand-type respirators should neither be used nor approved.

Respiratory Protection Handbook William H. Revoir, 1997-02-13 For novices and experienced health and safety professionals alike, the *Respiratory Protection Handbook* fills a critical gap in the respiratory protection literature. This extensive guide provides all the information you need to dramatically expand your understanding of the concepts and day-to-day operations of respiratory protection. It is a fully self-contained text that expertly accomplishes two goals: first, for the novice, it clearly explains how to establish and implement an effective respiratory protection program; and second, for the experienced professional, it provides in-depth knowledge that goes beyond basics. *Respiratory Protection Handbook* addresses the development of respiratory protection devices, the capabilities and limitations of specific respirators, the respirator certification system, how to select appropriate filters, how to predict the service life of sorbents, fit testing methods, assigned protection factors, and much more. Nowhere else will you find a single source on this topic containing so much information.

Covid-19: HOW TO CHOOSE MASK Dr. Timothy Zahar, Bs. Lê Trọng Đại, INTRODUCTION In the past few days, I have received many emails from readers asking about how to choose the right mask to protect the safety of you and your loved ones during the flu pandemic. As a doctor, I understand your confusion at the supermarket. There are many different types of face masks. And we don't know which one to choose: * What kind of mask prevents

dust? * What kind of mask prevents bacteria? *What kind of masks can prevent viruses? Therefore, I am writing this small book to guide you on how to choose the right face mask for the flu. Content includes: 1. Types of face masks suitable to protect you from the flu virus. 2. Use respirator correctly to maximize the effectiveness of preventing the influenza virus. 3. Tips you can do right away to boost your immunity to the flu. I write this book based on answering the questions frequently asked by readers, so I believe it will be very easy to understand and practical to you. Thank you. Dr. Timothy Zahar

Current Issues in the Assessment of Respiratory Protective Devices for Occupational and Non-Occupational Uses National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, 2021-01-13 To address approaches to the respirator approval process in the current landscape for both occupational and non-occupational use of respirators, the National Academies of Sciences, Engineering, and Medicine's Standing Committee on Personal Protective Equipment for Workplace Safety and Health convened a virtual workshop, Current Issues in the Assessment of Respiratory Protective Devices: Nontraditional Workers and Public Use on August 4â€5, 2020. Additionally, the workshop considered gaps in respiratory protection for outdoor workers and the general public. This publication summarizes the presentation and discussion of the workshop.

Assessment of the NIOSH Head-and-Face Anthropometric Survey of U.S. Respirator Users Institute of Medicine, Board on Health Sciences Policy, Committee for the Assessment of the NIOSH Head-and-Face Anthropometric Survey of U.S. Respirator Users, 2007-04-30 NIOSH and the Occupational Safety and Health Administration

(OSHA) share responsibility for overseeing respiratory protection in the workplace and have established regulations for this purpose. Specifically, NIOSH has issued regulations which define respirator testing and certification. OSHA has issued regulations which define conditions under which employers are required to maintain respiratory protection programs in general industry, shipyards, marine terminals, and construction. In 2005, NIOSH contracted with the Institute of Medicine (IOM) to study the NIOSH-sponsored Anthrotech study along with its supporting information and reports, and to examine and report on the adequacy and relevance of the study protocol, the analyses conducted, the resulting anthropometric dataset, and the appropriateness of the respirator fit-test panels derived from the new dataset. Assessment of the NIOSH Head-and-Face Anthropometric Survey of U.S. Respirator Users focuses on the establishment of the scientific base required for certification standards of respirators, not their use in the workplace. This report describes and analyzes the anthropometric measurements performed by Anthrotech for its NIOSH-sponsored study. This report looks at the survey methods used by Anthrotech in the study, and examines how Anthrotech analyzed its data to derive fit-test panels and suggests some ways that analysis could be improved. This report discusses future directions, pointing toward further analyses of the data and offers suggestions for moving from research to practice.
