*Protection of Public Health from Microbial and Chemical Hazards in Swimming Pool Environments* Yuli Ekowati,2019-03-29 This thesis describes the occurrence of microbial and chemical contaminants in swimming pools and the investigation of an alternative disinfection technology, UVOX Redox® that could reduce reliance on chlorine and the formation of chlorinated

disinfection byproducts (DBPs) in swimming pools. This technology was effective in inactivation of chlorine resistant microorganisms, represented by *Bacillus subtilis* spores, and in combination with chlorine generated lower concentrations of chlorinated DBPs compared to chlorination alone. It enhanced the removal of pharmaceuticals and personal care products (PPCPs), which were frequently present in indoor, outdoor and spa pools.

Carbamazepine and 1H-benzotriazole were the most frequently detected PPCPs, while hydrochlorothiazide and 4-methylbenzylidene camphor were detected at the highest concentration. An investigation of seven different swimming pool facilities showed that clinically relevant fungi were omnipresent. Floors at the sites where the pool visitors converge, such as the exit leading to shower rooms, showed the highest fungal concentrations. The distribution of fungi inside the swimming pool facilities highlighted potential transmission pathways and a possible risk of fungal infections. Future swimming pool water guidance should include raising awareness among swimmers, pool operators and managers about hygienic behaviour and better hygiene measures, and application of alternative disinfection technologies such as UVOX. Key features: Identifies clinically relevant fungi in swimming pool environments Identifies potential transmission pathways of clinically relevant fungi in indoor swimming pools Highlights the occurrence of PPCPs in different type of pools and their relation with pool water treatment Assesses an alternative disinfection technology for swimming pool water treatment.

**Stability of Operators and Operator Semigroups** Tanja Eisner, 2019-10-01 The asymptotic behaviour, in particular stability in some sense, is studied systematically for discrete and for continuous linear dynamical systems on Banach spaces. Of particular concern is convergence to an equilibrium with respect to various topologies. Parallels and differences between the discrete and the continuous situation are emphasised.

**Field Notes** Zachary Lockman, 2016-03-30 Field Notes reconstructs the origins and trajectory of area studies in the United States, focusing on Middle East studies from the 1920s to the 1980s. Drawing on extensive archival research, Zachary Lockman shows how the Carnegie, Rockefeller, and Ford foundations played key roles in conceiving, funding, and launching postwar area studies, expecting them to yield a new kind of interdisciplinary knowledge that would advance the social sciences while benefiting government agencies and the American people. Lockman argues, however, that these new academic fields were not simply a product of the Cold War or an instrument of the American national security state, but had roots in shifts in the

humanities and the social sciences over the interwar years, as well as in World War II sites and practices. This book explores the decision-making processes and visions of knowledge production at the foundations, the Social Science Research Council, and others charged with guiding the intellectual and institutional development of Middle East studies. Ultimately, *Field Notes* uncovers how area studies as an academic field was actually built—a process replete with contention, anxiety, dead ends, and consequences both unanticipated and unintended.

Intimate Facts about Wheat Grain Storage Proteins, Gliadins and Glutenins Eugene Metakovsky,2022-09-08 Bread and other products made of wheat dough are the basis of nutrition for a significant part of the world's population. The international wheat science community have long been concentrated on the study of complex processes leading from wheat grain to a loaf of bread. A huge amount of data has been accumulated during this struggle for improving bread quality. This book details actual successes and problems of wheat storage-protein genetics, and discusses discrepancies, doubts and confusions of some recent experimental data. As such, it will be beneficial not only for advanced students interested in plant genetics, but also for wheat scientists and breeders.

*The Spirit of Industry and Improvement* Daniel Samson, Danny Samson, 2008 The notion of improvement permeated social and political discourse in colonial Canadian society. From agriculture to building roads and mills to defining correct habits and behaviour, Nova Scotia's improvers embraced the ideals of innovation and progress and promoted modern programs of government. Daniel Samson moves Nova Scotia and rural Canada from the colonial margins to the heart of a modernizing society, showing how the countryside functioned as a centre of change and innovation. He connects a fascinating spectrum of sites, actors, and strategies and links settlement, farm-building, rural market formation, and early industrialization to the heterogeneous strategies of families and state actors, the rural poor, and rural elites. The Spirit of

Industry and Improvement presents the first-ever overview of rural colonial Nova Scotia and provides compelling insights into the formation of modern liberal practices of government and self-government in British North America.
