**Raising Red Flags** N.R. Jenzen-Jones, Jonathan Ferguson, 2014-11-18 This report examines the significant range of arms and munitions carried and employed throughout the conflict by armed individuals on all sides. It also examines, somewhat less extensively, the range of armoured vehicles and aircraft observed in the conflict. This report examines over 100 distinct weapons systems, over 60 different types of munitions, and over 70 different models of armoured fighting vehicles, as well as miscellaneous associated materiel, in the context of the ongoing conflict in Ukraine. Particular attention is paid to items which may indicate flows of arms and munitions into and within the affected areas of Ukraine. Beginning with an assessment of the arms and munitions employed during the initial unrest in Kiev, in February 2012, the report documents relevant materiel up until the time of publication

**Designs 2002** W.D. Wallis, 2013-12-01 This volume is a sequel to our 1996 compilation, *Computational and Constructive Design Theory*. Again we concentrate on two closely related aspects of the study of combinatorial designs: design construction and computer-aided study of designs. There are at least three classes of constructive problems in design theory. The first type of problem is the construction of a specific design. This might arise because that one particular case is an exception to a general rule, the last remaining case of a problem, or the smallest unknown case. A good example is the proof that there is no projective plane of parameter 10. In that case the computations involved were not different in kind from those which have been done by human brains without electronic assistance; they were merely longer. Computers have also been useful in the study of combinatorial spectrum problems: if a class of design has certain parameters, what is the set of values that the parameters can realize? In many cases, there is a recursive construction, so that the existence of a small number of starter designs leads to the construction of infinite classes of designs, and computers have proven very useful in finding starter designs.

**Biophysical Regulation of Vascular Differentiation and Assembly** Sharon Gerecht, 2011-01-06 Because of their ability to differentiate and develop into functional vasculature, stem cells hold tremendous promise for therapeutic applications. However, the scientific understanding and the ability to engineer these cellular systems is still in its early stages, and must advance significantly for the therapeutic potential of stem cells to be realized. Stem cell differentiation and function are exquisitely tuned by their microenvironment. This book will provide a unique perspective of how different aspects of the vasculature microenvironment regulate differentiation and assembly. Recent efforts to exploit modern engineering techniques to study and manipulate various biophysical cues will be described including: oxygen tension during adult and embryonic vasculogenesis (Semenza and Zandstra), extracellular matrix during tube morphogenesis and angiogenesis (Wirtz, Davis, Ingber), surface topography and modification (Chen and Gerecht), shear stress and cyclic strain effect on vascular assembly and maturation (Vunjak-Novakovic and Niklason), and three dimensional space for angio- and vasculogenesis (Ferreria and Fischbach).

for Drug Delivery and Regenerative Medicine is an archival reference for researchers, students and scientists working on hydrogels based on microbial and animal sources. The book contains Information regarding their synthesis, characterization, and applications in the field of drug delivery and regenerative medicine. Each chapter addresses a separate polysaccharide hydrogel and its suitability in drug delivery and/or regenerative medicine. This is a novel resource that brings together a panel of highly accomplished experts in the field of natural polysaccharides to discuss basic causes and specific problems related to drug delivery and regenerative medicine. Presents detailed practical and theoretical concepts Includes fundamentals and methodologies for hydrogel preparation Covers all hydrogels and specific applications in the field of drug delivery and tissue engineering

**Biology and Engineering of Stem Cell Niches** Ajaykumar Vishwakarma, Jeffrey M Karp, 2017-03-22 Biology and Engineering of Stem Cell Niches covers a wide spectrum of research and current knowledge on embryonic and adult stem cell niches, focusing on the understanding of stem cell niche molecules and signaling mechanisms, including cell-cell/cell-matrix interactions. The book comprehensively reviews factors regulating stem cell behavior and the corresponding approaches for understanding the subsequent effect of providing the proper matrix molecules, mechanical cues, and/or chemical cues. It encompasses a variety of tools and techniques for developing biomaterials-based methods to model synthetic stem cell niches in vivo, or to enhance and direct stem cell fate in vitro. A final section of the book discusses stem cell niche bioengineering strategies and current advances in each tissue type. Includes the importance of Cell-Cell and Cell Matrix Interactions in each specific tissue and system Authored and edited by authorities in this emerging and multidisciplinary field Includes valuable links to 5-10 minute YouTube® author videos that describe main points

*Astronautical Research 1971* L.G. Napolitano, P. Contensou, W.F. Hilton, 2012-12-06 The International Astronautical Federation is the only professional society in the field of aerospace engineering and Sciences which brings together specialists of all countries interested in the exploration and peaceful exploitation of space. At its annual Congresses a large number of invited and/or carefully selected contributed papers are presented which cover a wide variety of topics and are distributed over a number of sessions, each one being organized by two leading scientists who later chair the session itself. Each year the selection of specific topics to be dealt with. is dictated either by significant new progress achieved in some sectors or by new developments and trends which are liable to influence substantially the objectives toward which space research and/or application of space technology will be oriented in the immediate future. A second rigorous screening, performed with the help of the Session Chairmen and carried out according to the same criteria identifies finally the papers which are published in the Proceedings. The outcome of all this is reliable and authoritative information as to the actual status and future trends of space activities, both from the research point of view and from the point of view of utilization and/or application.

**Comprehensive Biomaterials** Paul Ducheyne, Kevin Healy, Dietmar W. Hutmacher, David W. Grainger, C. James Kirkpatrick, 2015-08-28 Comprehensive

Biomaterials brings together the myriad facets of biomaterials into one, major series of six edited volumes that would cover the field of biomaterials in a major, extensive fashion: Volume 1: Metallic, Ceramic and Polymeric Biomaterials Volume 2: Biologically Inspired and Biomolecular Materials Volume 3: Methods of Analysis Volume 4: Biocompatibility, Surface Engineering, and Delivery Of Drugs, Genes and Other Molecules Volume 5: Tissue and Organ Engineering Volume 6: Biomaterials and Clinical Use Experts from around the world in hundreds of related biomaterials areas have contributed to this publication, resulting in a continuum of rich information appropriate for many audiences. The work addresses the current status of nearly all biomaterials in the field, their strengths and weaknesses, their future prospects, appropriate analytical methods and testing, device applications and performance, emerging candidate materials as competitors and disruptive technologies, and strategic insights for those entering and operational in diverse biomaterials applications, research and development, regulatory management, and commercial aspects. From the outset, the goal was to review materials in the context of medical devices and tissue properties, biocompatibility and surface analysis, tissue engineering and controlled release. It was also the intent both, to focus on material properties from the perspectives of therapeutic and diagnostic use, and to address questions relevant to state-of-the-art research endeavors. Reviews the current status of nearly all biomaterials in the field by analyzing their strengths and weaknesses, performance as well as future prospects Presents appropriate analytical methods and testing procedures in addition to potential device applications Provides strategic insights for those working on diverse application areas such as R&D, regulatory management, and commercial development

**Vietnam War Booby Traps** Gordon L. Rottman, 2020-10-29 During the Vietnam War, the Viet Cong were frequently unable to hold their own in stand-up fights against US and allied forces who were superior in strength, firepower, mobility, and logistics. They relied instead on traditional guerrilla warfare tactics including small-scale hit- and-run attacks, ambushes, terrorist actions, and precision attacks against bases. These included one of the oldest of guerrilla weapons – the boobytrap. Booby traps could be made in large numbers in village workshops and jungle camps using locally available materials as well as modern munitions. The VC were adept at making booby traps 'invisible' in the varied terrain of Vietnam, often emplacing them in locations and surroundings totally unexpected by their enemies. Booby traps could be incredibly simple or startlingly complex and ingenious, ranging from pointed sticks to command-detonated submerged floating river mines. Besides a wide variety of booby traps, they also used land and water mines, both contact/pressure-detonated and command-detonated. Between January 1965 and June 1970 11 percent of US troop deaths in action and 17 percent of injuries were by caused booby traps and mines. This fascinating title explores not only the wide variety of booby traps employed by the Viet Cong, but also their various uses in halting, stalling, or locating an enemy, and the many evolutions these traps underwent in order to retain the element of surprise.

Written by a Vietnam veteran with first-hand experience of such traps, this is an engaging look at one of the most frightening aspects of guerrilla warfare.
