Protection of Fundamental Rights in Europe Sonia Morano-Foadi, Stelios Andreadakis, 2020-05-14 This monograph offers a longitudinal analysis of the developments in the European fundamental rights arena during the last decade. Decisions of critical importance on the future of the EU need to be taken by the EU institutions and the Member States' governments. The 'existential' crisis affecting Europe is essentially a crisis of values revealing a lack of shared vision. Based on this premise, this monograph contributes to the debate on how to overcome the current impasse. By situating the analysis of the EU in the context of a wider Europe, which includes the ECHR (and its interpretation by the ECtHR), this work challenges the idea that the project of European integration

should be abandoned. Instead it proposes a re-orientation of this process, conceptualised as a dynamic interaction of different actors, sources and laws on fundamental rights within the wider Europe. Following an evaluation of the current fundamental rights' regimes, the monograph proposes a model of effective governance of fundamental rights in Europe based on the doctrines of dialogical constitutionalism and agency. This original and innovative contribution is enriched by findings from British Academy funded research on the European architecture of fundamental rights post-Lisbon Treaty.

Introduction to OFDM Receiver Design and Simulation Y.J. Liu, 2019-11-30 This practical book is an accessible introduction to Orthogonal frequency-division multiplexing (OFDM) receiver design, a technology that allows digitized data to be carried by multiple carriers. It offers a detailed simulation study of an OFDM algorithm for Wi-Fi and 4G cellular that can be used to understand other OFDM waveforms. Extensive simulation studies are included using the transmission waveform given by the IEEE 802.11 standard. Scrambler, error-correcting codes, interleaver and radio-wave propagation model are included. OFDM waveform characteristics, signal acquisition, synchronization issues, channel estimation and tracking, hard and soft decision decoding are all covered. Detailed derivations leading to the final formula for any algorithm are

given, which allows the reader to clearly understand the approximations and conditions behind the formulas and apply them appropriately. The algorithms are selected not just for the best performance from simulation study but also for easy implementation. An example is a unique algorithm for signal acquisition using the principle of maximum likelihood detection.
