Outnumbered David Sumpter,2018-04-19 'Fascinating' Financial Times Algorithms are running our society, and as the Cambridge Analytica story has revealed, we don't really know what they are up to. Our increasing reliance on technology and the internet has opened a window for mathematicians and data researchers to gaze through into our lives. Using the data they are constantly collecting about where we travel, where we shop, what we buy and what interests us, they can begin to predict our daily habits. But how reliable is this data? Without understanding what mathematics can and can't do, it is impossible to get a handle on how it is changing our lives. In this book, David Sumpter takes an algorithm-strewn journey to the dark side of mathematics. He investigates the equations that analyse us, influence us and will (maybe) become like us, answering questions such as: Who are Cambridge Analytica? And what are they doing with our data? How does Facebook build a 100-dimensional picture of your personality? Are Google algorithms racist and sexist? Why do election predictions fail so drastically? Are algorithms that are designed to find criminals making terrible mistakes? What does the future hold as we relinquish our decision-making to machines? Featuring interviews with those working at the cutting edge of algorithm research, including Alex Kogan from the Cambridge Analytica story, along with a healthy dose of mathematical self-experiment, Outnumbered will explain how mathematics and statistics work in the real world, and what we should and shouldn't worry about. A lot of people feel outnumbered by algorithms – don't be one of them.

FSpace Roleplaying Complete Rulebook 2010 v2 Martin Rait,2010-12-04 FSpaceRPG is a science fiction roleplaying game in the classic mould. In the late 22nd century mankind expands into the the stars only to find them in more turmoil than it's own internal nationalism. Pitted against the onslaught of the

expansion of the Stotatl Empire, humanity must defend itself while forging alliances with others who face absorption. Whether you're a Terran soldier or an Aronhi Warrior from the partially conquered Aronhi Empire, one goal stands supreme above all, survival. The wits and courage to stand and fight against superior odds and create victories from difficult situations. But not all the glory lies in the hands of warriors. Exploration of the vast wilderness that is space, charting dangers, finding resources and contacting potential allies is a cornerstone of survival. The conflict, intrigue, action and adventure of these times provide an exciting roleplaying environment for players, whether they like playing space marines, traders, spies, investigators or just general adventure seekers. The span of events in reality are all possible, giving a wide scope of play. If you don't like flying around the cosmos as a British Royal Space Marine then you could always visit a primitive society and face the challenge of worlds filled with mystery, fantasy and danger. The Complete rulebook 2010 contains all you need to generate characters, select equipment and play this character level roleplaying game. Includes information on robots, starships and vehicles as well. Plenty of information on the various alien races and empires exist, including character generation profiles for 15 races. It also includes some starter scenarios to get you going. What you get: The FSpaceRPG Complete Rulebook 2010 v2 is a 400 page rulebook with all the core rules for running this role-playing game as well as plenty of information on the universe. Delivered in our color book style with plenty of colour illustrations, this edition is great entry into the world of FSpaceRPG. This book is a merger of the Concise Rulebook 4.2 with: • Derelict v2 • vehicle profiles from AGLC, Rough Rider and Tech Update • gun profiles from Tech Update and Turram Encounter • starship profiles from Tech Update and Turram Encounter • Robots v1 replaced entire robots section • Personality 1.1 • Martial Arts v1.1 • Serpenti Regional maps • Alt Skills • Library Data 2177 • the 2177 calendar from Netrules 2 • Kuetques v1.1 • Solarians 1.1 • Psionics v1.1 replacing entire psionics section • Quinkose Contact & Boarding Action scenarios from FED Times • Elements from Turram Encounter and McDougal Space v2

Minding the Future Barry Dainton, Will Slocombe, Attila Tanyi, 2021-08-31 Bringing together literary scholars, computer scientists, ethicists, philosophers of mind, and scholars from affiliated disciplines, this collection of essays offers important and timely insights into the pasts, presents, and, above all, possible futures of Artificial Intelligence. This book covers topics such as ethics and morality, identity and selfhood, and broader issues about AI, addressing questions about the individual, social, and existential impacts of such technologies. Through the works of science fiction authors such as Isaac Asimov, Stanislaw Lem, Ann Leckie, Iain M. Banks, and Martha Wells, alongside key visual productions such as Ex Machina, Westworld, and Her, contributions illustrate how science fiction might inform potential futures as well as acting as a springboard to bring disciplinary knowledge to bear on significant developments of Artificial Intelligence. Addressing a broad, interdisciplinary audience, both expert and non-expert readers gain an in-depth understanding of the wide range of pressing issues to which Artificial Intelligence gives rise, and the ways in which science fiction narratives have been used to represent them. Using science fiction in this manner enables readers to see how even fictional worlds and imagined futures have very real impacts on how we understand these technologies. As such, readers are introduced to theoretical positions on Artificial Intelligence through fictional works as well as encouraged to reflect on the diverse aspects of Artificial Intelligence through its many philosophical, social, legal, scientific, and cultural ramifications.

Armament, Arms Control and Artificial Intelligence Thomas Reinhold, Niklas Schörnig, 2022-10-08 Looking at a variety of armament sectors, the book examines how Artificial Intelligence (AI) impacts the fields of armament and arms control, how existing arms control measures will be affected by AI, and what new approaches based on AI have been or are currently developed. The significant increase in computing power, the increasing reliance on software, and the advent of (narrow) AI and deep-learning algorithms all have the potential to lead to disruptive changes for military operations and warfare, rendering many classical arms control instruments less effective, or even useless. On the other hand, AI might lead to completely new arms control approaches, raising the effectiveness and reliability of new verification measures. To provide a common understanding, the book starts by presenting a general introduction to the state of the art in artificial intelligence and arms control, and how the two topics are interrelated. The second part of the book looks at examples from various fields of weapon technology, including weapons of mass destruction (WMD), conventional armament, and emerging technologies. The final section offers a cross-cutting perspective based on the examples presented in the second part. This volume will appeal to students and scholars of international relations, as well as policy-makers and practitioners interested in a better understanding of peace and security studies in general, and armament and arms control in particular with a strong focus on AI.

Which could bring us to the unusual conclusion that Cat-Boy is bored out of his mind! Which puts EVERYONE in more danger than usual!
