**The Madwoman and the Roomba: My Year of Domestic Mayhem** Sandra Tsing

Loh,2020-06-02 A comic exploration of a year in the life of an “imaginatively twisted and fearless” (Los Angeles Times) best-selling author. Ah, 55. Gateway to the golden years! Professional summiting. Emotional maturity. Easy surfing toward the glassy blue waters of retirement. . . . Or maybe not? Middle age, for Sandra Tsing Loh, feels more like living a disorganized 25-year-old’s life in an 85-year-old’s malfunctioning body. With raucous wit and carefree candor, Loh recounts the struggles of leaning in, staying lean, and keeping her family well-fed and financially afloat?all those burdens of running a household that still, all-too-often, fall to women. The Madwoman and the Roomba chronicles a roller coaster year for Loh, her partner, and her two teenage daughters in their ramshackle quasi-Craftsman, with a front lawn that’s more like a rectangle of compacted dirt and mice that greet her as she makes her morning coffee. Her daughters are spending more time online than off; her partner has become a Hindu, bringing in a household of monks; and she and her girlfriends are wondering over Groupon “well” drinks how they got here. Whether prematurely freaking out about her daughters’ college applications, worrying over her eccentric aging father, or overcoming the pitfalls of long-term partnership and the temptations of paired-with-cheese online goddess webinars, Loh somehow navigates the realities of what it means to be a middle-aged woman in the twenty-first century. Including a new epilogue hilariously recounting her family’s quarantine experience during the pandemic, The Madwoman and the Roomba is a “wildly funny” testament to Loh’s “brilliant wit and rock-solid resilience” (Henry Alford).

My Robot Gets Me Carla Diana,2021-03-30 Your relationships with your smart products are about to get a lot more personal. Think how commonplace it is now for people to ask

Siri for the weather forecast, deploy Roomba to clean their homes, or summon Alexa to turn on the lights. The smart home market will reach well over \$100 billion in the next five years on the promise of products that are truly integrated with our cooking, cleaning, entertainment, security, and hygiene habits. But the reality is, these first-generation smart products aren't very smart—yet. We're clearly seeing only the tip of the iceberg in terms of capability and how such products can enhance our lives. How do we take it to the next level? In a word, design—and more specifically, social design. In this fascinating and instructive book, leading product design expert Carla Diana describes how new technology is allowing designers to humanize consumer products in delightfully subtle ways. Showcasing vivid examples of social design principles such as product presence, object expression, and interaction intelligence, we see how inventive uses of light, sound, and movement can evoke human responses to even the most mundane products. Diana offers clear guidelines and takeaways for conceptualizing, building, and optimizing products using such methods as bodystorming, scenario storyboarding, video prototyping, behavior charting, and more. *My Robot Gets Me* provides keen insights and practical advice to anyone interested or involved in the burgeoning smart marketplace, from product designers and developers to managers and venture capitalists.

Designing Agentive Technology provides both a conceptual grounding and practical advice to unlock agentive technology's massive potential.

**Neural Approaches to Dynamics of Signal Exchanges** Anna Esposito, Marcos Faundez-Zanuy, Francesco Carlo Morabito, Eros Pasero, 2019-09-18 The book presents research that contributes to the development of intelligent dialog systems to simplify diverse aspects of everyday life, such as medical diagnosis and entertainment. Covering major thematic areas: machine learning and artificial neural networks; algorithms and models; and social and biometric data for applications in human-computer interfaces, it discusses processing of audio-visual signals for the detection of user-perceived states, the latest scientific discoveries in processing verbal (lexicon, syntax, and pragmatics), auditory (voice, intonation, vocal expressions) and visual signals (gestures, body language, facial expressions), as well as algorithms for detecting communication disorders, remote health-status monitoring, sentiment and affect analysis, social behaviors and engagement. Further, it examines neural and machine learning algorithms for the implementation of

advanced telecommunication systems, communication with people with special needs, emotion modulation by computer contents, advanced sensors for tracking changes in real-life and automatic systems, as well as the development of advanced human-computer interfaces. **Small Data** Martin Lindstrom, 2016-02-23 In an era where many believe Big Data has rendered human perception and observation 'old-school' or passe, Martin Lindstrom shows that mining and matching technological data with up-close psychological insight creates the ultimate snapshot of who we really are and what we really want. He works like a modern-

day Sherlock Holmes, accumulating small clues - the progressively weaker handshakes of Millennials, a notable global decrease in the use of facial powder, a change in how younger consumers approach eating ice cream cones - to help solve a stunningly diverse array of challenges. 'Small Data' presents a rare behind-the-scenes look at what it takes to create global brands, and reveals surprising and counter-intuitive truths about what connects us all as humans

**WE: ROBOT** David Hambling, 2018-06-07 For someone interested in practical present day robotics it's a treasure trove. A book-sized Top Trumps rove across the technical domain, with each section containing a photo of the precise robot, an overview of its main components and some context for its aims and purposes. - Electronics Weekly Robots exist all around us. They populate our factories, assist our surgeons and have become an integral part of our armed forces. But they are not just working behind the scenes - impressive inventions such as free-roaming hoovers take care of your household chores and the iPal is set to become your closest friend. David Hambling reveals the groundbreaking machines - once the realm of science fiction - that are by our sides today, and those that are set to change the future forever. From the Reem robocop that polices the streets of Dubai to the drones that deliver our parcels and even the uncanny Gemonoid Hi-4 built to look just like you, here are fifty unique robots that reach into every aspect of our daily lives. We:Robot examines why robots have become embedded in our culture, how they work and what they tell us about our society and its future.

How the Body Shapes the Way We Think Rolf Pfeifer, Josh Bongard, 2006-10-27 An exploration of embodied intelligence and its implications points toward a theory of

intelligence in general; with case studies of intelligent systems in ubiquitous computing, business and management, human memory, and robotics. How could the body influence our thinking when it seems obvious that the brain controls the body? In *How the Body Shapes the Way We Think*, Rolf Pfeifer and Josh Bongard demonstrate that thought is not independent of the body but is tightly constrained, and at the same time enabled, by it. They argue that the kinds of thoughts we are capable of have their foundation in our embodiment—in our morphology and the material properties of our bodies. This crucial notion of embodiment underlies fundamental changes in the field of artificial intelligence over the past two decades, and Pfeifer and Bongard use the basic methodology of artificial intelligence—understanding by building—to describe their insights. If we understand how to design and build intelligent systems, they reason, we will better understand intelligence in general. In accessible, nontechnical language, and using many examples, they introduce the basic concepts by building on recent developments in robotics, biology, neuroscience, and psychology to outline a possible theory of intelligence. They illustrate applications of such a theory in ubiquitous computing, business and management, and the psychology of human memory. Embodied intelligence, as described by Pfeifer and Bongard, has important implications for our understanding of both natural and artificial intelligence.
