Lovich,Whit Gibbons,2021-12-07 A lavishly illustrated guide to the world's turtles that covers every family and genus Turtles of the World reveals the extraordinary diversity of these amazing reptiles. Characterized by the bony shell that acts as a shield to protect the softer body within, turtles are survivors from the time of the dinosaurs and are even more ancient in evolutionary terms than snakes and crocodilians. Of more than 350 species known today, some are highly endangered. In this beautiful guide, turtle families, subfamilies, and genera are illustrated with hundreds of color photographs. Each genus profile includes a population distribution map, a table of information, and commentary that includes notable characteristics and discussion of related species. More than 250 beautiful color photos Each profile features a distribution map, table of information, and commentary Broad coverage includes every family and genus

1996 IUCN Red List of Threatened Animals Ulf Gärdenfors,A. J. Stattersfield,International Union for Conservation of Nature and Natural Resources. Species Survival Commission,1996 The 1994 IUCN Red List of Threatened Animals was a major advance on its predecessors in clarity of layout and amount of information presented. This is taken further in the 1996 edition, which is also the first global compilation to use the complete new IUCN Red List category system.

Turtle Planet Yun Rou,2020-04-14 The author and Daoist monk shares a beautiful depiction of the natural world—and a powerful plea for preserving our planet—in this philosophical tale. This unique work of philosophical fiction explores the wonders and suffering of the world through the eyes of eighteen exotic turtles. In this vividly imaginative way, Monk Yun Rou asks readers to consider the intimate bond between humans and animals: the wisdom they teach us, the wounds they can heal, and the role we play in their destruction. Drawing on fifty years of loving and husbanding turtles, from the car-sized giant Leatherback turtle to the Central Asian tortoise, Monk Yun Rou sounds the alarm of what climate change, global extinction, human intervention, and environmental devastation really mean to their worlds and to ours. An informational glossary and description of each turtle is provided at the end of the book.

Threatened and Recently Extinct Vertebrates of the World Matthew Richardson,2023-03-09 Habitat loss and degradation are currently the main anthropogenic causes of species extinctions. The root cause is human overpopulation. This unique volume provides, for the very first time, a comprehensive overview of all threatened and recently extinct mammals, birds, reptiles, amphibians, and fishes within the context of their locations and habitats. The approach takes a systematic examination of each biogeographic realm and region of the world, both terrestrial and marine, but with a particular emphasis on geographic features such as mountains, islands, and coral reefs. It reveals patterns useful in biodiversity conservation, helps to put it all into perspective, and ultimately serves as both a baseline from which to compare subsequent developments as well as a standardization of the way threatened species are studied.

Threatened Freshwater Animals of Tropical East Asia David Dudgeon,2022-08-04 This book offers a comprehensive account of the current state of inland waters in tropical and subtropical East Asia, exploring a series of case studies of freshwater fish, reptiles, amphibians, birds, mammals and water

bodies at particular risk. The book highlights the rich freshwater biodiversity of tropical East Asia and draws attention to the various threats it faces due to human activities and rapid environmental change. It addresses the question of whether the contributions of these animals and habitats, or biodiversity in general, to ecosystem functioning and service provision provide sufficient basis for arguments supporting nature conservation. Drawing on instances from the rivers and lakes of tropical East Asia, the book also asks whether the benefits accruing from intact ecosystems are likely to be enough to ensure their preservation. If the answer to either or both these questions is 'no', then what are the prospects for freshwater biodiversity in rapidly changing tropical East Asia? This book will be of interest to students and scholars of biodiversity, conservation, freshwater ecology, ecosystem services and Asian Studies.
