Hydrodynamic Limits of the Boltzmann Equation Laure Saint-Raymond, 2009-03-26 The material published in this volume comes essentially from a course given at the Conference on Boltzmann equation and fluidodynamic limits, held in Trieste in June 2006. -- preface.

Summa on Marriage Saint Raymond (of Peñafort), Pontifical Institute of Mediaeval Studies, 2005 The birth and flowering of canonical jurisprudence in the twelfth century is one of the most striking and fruitful developments of the age, marking an important turn in the history of the Church and in framing the essential elements of the rule of law in political and social

life. Raymond of Penyafort was an important participant in these developments. Born near Barcelona in 1175, he became a teacher of canon law at Bologna, the greatest centre of legal studies. He joined the newly founded Order of Preachers (Dominicans), and championed multilingual education of the friars for a more effective evangelization of Muslims and Jews. He became Master General of the Order in 1238, and died in 1275. He was canonized in 1601 and has been declared the patron saint of canon lawyers. Pope Gregory IX appointed Raymond to produce a comprehensive compilation of papal legal decisions. The result, the Decretals of Gregory IX (1234), would remain normative in the Catholic Church until 1917. Raymond drew on it to compose his *Summa* on Marriage, a summary of learned reflection on the law of marriage, to aid his Dominican brothers in hearing confessions, where numerous problems touching on marriage would have been encountered. The definition of marriage and of its ends, stages and impediments, arrangements and consequences are the subject of the work. This translation of it offers students and scholars alike a comprehensive presentation of the medieval teaching on marriage - learned in content, practical in orientation.--BOOK JACKET.

Elementary Introduction to the Theory of Pseudodifferential Operators

Xavier Saint Raymond, 2018-02-06 In the 19th century, the Fourier transformation was introduced to study various problems of partial

differential equations. Since 1960, this old tool has been developed into a well-organized theory called microlocal analysis that is based on the concept of the pseudo-differential operator. This book provides the fundamental knowledge non-specialists need in order to use microlocal analysis. It is strictly mathematical in the sense that it contains precise definitions, statements of theorems and complete proofs, and follows the usual method of pure mathematics. The book explains the origin of the theory (i.e., Fourier transformation), presents an elementary construction of distribution theory, and features a careful exposition of standard pseudodifferential theory. Exercises, historical notes, and bibliographical references are included to round out this essential book for mathematics students; engineers, physicists, and mathematicians who use partial differential equations; and advanced mathematics instructors.

Hydrodynamic Limits of the Boltzmann Equation Laure Saint-Raymond, 2009-04-20 The aim of this book is to present some mathematical results describing the transition from kinetic theory, and, more precisely, from the Boltzmann equation for perfect gases to hydrodynamics. Different fluid asymptotics will be investigated, starting always from solutions of the Boltzmann equation which are only assumed to satisfy the estimates coming from physics, namely some bounds on mass, energy and entropy.

Borel Liftings of Borel Sets: Some Decidable and Undecidable Statements
 Gabriel Debs, Jean Saint Raymond, 2007 One of the aims of this work is to investigate some natural properties of Borel sets which are undecidable in ZFC. The authors' starting point is the following elementary, though non-trivial result: Consider $X \subseteq 2^\omega \times 2^\omega$, set $Y = \pi(X)$, where π denotes the canonical projection of $2^\omega \times 2^\omega$ onto the first factor, and suppose that (\star) : Any compact subset of Y is the projection of some compact subset of X . If moreover X is $\mathbf{\Pi}^0_2$ then $(\star\star)$: The restriction of π to some relatively closed subset of X is perfect onto Y it follows that in the present case Y is also $\mathbf{\Pi}^0_2$. Notice that the reverse implication $(\star\star) \rightarrow (\star)$ holds trivially for any X and Y . But the implication $(\star) \rightarrow (\star\star)$ for an arbitrary Borel set X

$\subseteq 2^\omega \times 2^\omega$ is equivalent to the statement $\forall \alpha \in \omega^\omega, \aleph_1$ is inaccessible in $L(\alpha)$. More precisely The authors prove that the validity of $(\star) \rightarrow (\star\star)$ for all $X \in \Sigma^0_{1+\xi+1}$, is equivalent to $\aleph_\xi \leq \aleph_1$. ZFC, derive from (\star) the weaker conclusion that Y is also Borel and of the same Baire class as X . This last result solves an old problem about compact covering mappings. In fact these results are closely related to the following general boundedness principle $\text{Lift}(X, Y)$: If any compact subset of Y admits a continuous lifting in X , then Y admits a continuous lifting in X , where by a lifting of $Z \subseteq \pi(X)$ in X we mean a mapping on Z whose graph is contained in X . The main result of this work will give the exact set theoretical strength of this principle depending on the descriptive complexity of X and Y . The authors also prove a similar result for a variation of $\text{Lift}(X, Y)$ in which continuous liftings are replaced by Borel liftings, and which answers a question of H. Friedman. Among other applications the authors obtain a complete solution to a problem which goes back to Lusin concerning the existence of $\mathbf{\Pi}_1^1$ sets with all constituents in some given class $\mathbf{\Gamma}_\delta$ of Borel sets, improving earlier results by J. Stern and R. Sami. Borel sets (in ZFC) of a new type, involving a large amount of abstract algebra. This representation was initially developed for the purposes of this proof, but has several other applications.
