The Continuing Story of The International Space Station Peter Bond,2002-05 In this fascinating and well-written text Peter Bond describes the development and evolution of space stations. Particular emphasis is placed on the International Space Station, beginning with the revolution that began in 1970, when Salyut 1, the world's first space station was sent into orbit by the Soviet Union. Defeated in the race to the Moon, the Soviets redirected their efforts towards the conquest of near-Earth space. In the next three decades, their increasingly large and sophisticated structures rewrote the history books as cosmonauts continued to push back all space endurance records. In clear and concise language the book explains how the human exploitation of low-Earth orbit is about to change.

Mir Hardware Heritage David S. F. Portree,1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M ; the Kvant, Kvant 2, and Kristall modules ; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

Salyut : Soviet steps toward permanent human presence in space. ,2008 As the other major spacefaring nation, the Soviet Union is a subject of interest to the Congress in their deliberations concerning the future of U.S. space activities. In the course of an assessment of Civilian Space Stations (in 1983), the Office of Tech. Assessment (OTA) undertook a study of the presence of Soviets in space & their Salyut space stations. The major element in this technical memorandum was a workshop held at OTA in Dec. 1982: it was the first occasion when a significant number of experts in this area of Soviet space activities had met for extended unclassified discussion. As a result of the workshop, OTA prepared this report. Includes ¿Graphic Comparison of Soviet & U.S. Space Vehicles.¿ Illustrations.

Rockets and People: Volume IV: Memoirs of Russian Space Pioneer Boris Chertok, Stories about the Moon Race, N-1 Rocket, Salyut Space Stations, Soyuz 11 Tragedy, and Energiya-Buran Space Shuttle World Spaceflight News,Boris Chertok,Asif A. Siddiqi,National Aeronautics and Space Administration (NASA),2017-09-13 In this fourth and final volume of the series, Boris Chertok concludes his monumental trek through a nearly 100-year life, providing fascinating insights into the Soviet moon landing program and the four failed launches of its giant N-1 moon rocket. He also provides new details about the Soyuz 11 depressurization accident which killed three cosmonauts, the Almaz and Salyut space stations, and the Energiya-Buran Space Shuttle.Contents: Chapter 1 * Rocket-Space Chronology (Historical Overview) * Chapter 2 * U.S. Lunar Program * Chapter 3 * N1-L3 Lunar Program Under Korolev * Chapter 4 * A Difficult Conversation with Korolev * Chapter 5 * N1-L3 Control * Chapter 6 * We're Behind, but We're Not Giving In * Chapter 7 * KORD and ATG * Chapter 8 * Once Again We're Ahead of the Whole World * Chapter 9 * Sort It Out, and Report on Your Endeavors * Chapter 10 * 1969 -- the First N-1 Launch * Chapter 11 * After the Failure of N-1s No. 3 and No. 5 * Chapter 12 * Long-Duration Space Stations Instead of the Moon * Chapter 13 * Preparing for the Launch of DOS * Chapter 14 * Launching Salyut * Chapter 15 * Sun City * Chapter 16 * The Hot Summer of 1971 * Chapter 17 * The Last N-1 Launch * Chapter 18 * People in the Control Loop * Chapter 19 * Valentin Glushko, N-1, and NPO Energiya * Bonus - Review of the Soviet Space Program 1967.Editor Asif Siddiqi notes: Having known both Korolev and Glushko, Chertok has much to say about the relationship between the two giants of the Soviet space program. Contrary to much innuendo that their relationship was marred by the experience of the Great Terror in the late 1930s, Chertok shows that they enjoyed a collegial and friendly rapport well into the 1950s. Chertok has much to say about the development of the so-called KORD system, designed to control and synchronize the operation of the 42 engines on the first three changes of the giant rocket (see Chapters 5 and 7, especially). One of the main challenges of developing the N-1's engines was the decision to forego integrated ground testing of the first stage, a critical lapse in judgment that could have saved the engineers from the many launch accidents. Chertok's descriptions of the four launches of the N-1 (two in 1969, one in 1971, and one in 1972) are superb. He delves into great technical detail but also brings into relief all the human emotions of the thousands of engineers, managers, and servicemen and women involved in these massive undertakings. His accounts are particularly valuable for giving details of the process of investigations into the disasters, thus providing a unique perspective into how the technical frequently intersected with the political and the personal. His account in Chapter 17 of the investigation into the last N-1 failure in 1972 confirms that the process was fractured by factional politics, one side representing the makers of the rocket (the Mishin design bureau) and other representing the engine makers (the Kuznetsov design bureau).

Soyuz Rex Hall,David Shayler,2003-05-07 Rex Hall and Dave Shayler provide a unique history of the Soyuz spacecraft programme from conception, through development to its use, detailed in the only English language book available on this topic. Planned for publication in 2003, it will celebrate 40 years since the original concept of the Soyuz craft.

Outposts on the Frontier Jay Chladek,2017-08 The International Space Station (ISS) is the largest man-made structure to orbit Earth and has been conducting research for close to a decade and a half. Yet it is only the latest in a long line of space stations and laboratories that have flown in orbit since the early 1970s. The histories of these earlier programs have been all but forgotten as the public focused on other, higher-profile adventures such as the Apollo moon landings. A vast trove of stories filled with excitement, danger, humor, sadness, failure, and success, Outposts on the Frontier reveals how the Soviets and the Americans combined strengths to build space stations over the past fifty years. At the heart of these scientific advances are people of both greatness and modesty. Jay Chladek documents the historical tapestry of the people, the early attempts at space station programs, and how astronauts and engineers have contributed to and shaped the ISS in surprising ways. Outposts on the Frontier delves into the intriguing stories behind the USAF Manned Orbiting Laboratory, the Almaz and Salyut programs, Skylab, the Apollo-Soyuz Test Project, Spacelab, Mir station, Spacehab, and the ISS and gives past-due attention to Vladimir Chelomei, the Russian designer whose influence in space station development is as significant as Sergei Korolev's in rocketry. Outposts on the Frontier is an informative and dynamic history of humankind's first outposts on the frontier of space. Purchase the audio edition.

Shuttles and Space Missions Giles Sparrow,Judith John,Chris McNab,2015-12-15 Shuttles and Space Missions examines topics on space exploration, from early orbital missions to the first astronauts on the moon. Detailed illustrations and clear charts help explain these complicated topics.

The Story of Manned Space Stations Philip Baker,2007-08-20 This book charts the history of manned space stations in a logical, chronological order. It tells the story of the two major space powers starting out on their very separate programs, but slowly coming together. It describes rarely mentioned development programs, most of which never flew, including the US Manned Orbiting Laboratory, the Soviet Almaz station, and the Soviet Polyus battlestation. The Mir space station was one of the greatest human achievements in modern history, and a thorough telling of its story is essential to this book. This book is the first of its kind to tell the whole story of the manned space stations from the USA and Russia.

Architecture for Astronauts Sandra Häuplik-Meusburger,2011-10-18 Living and working in extra-terrestrial habitats means being potentially vulnerable to very harsh environmental, social, and psychological conditions. With the stringent technical specifications for launch vehicles and transport into space, a very tight framework for the creation of habitable space is set. These constraints result in a very demanding “partnership” between the habitat and the inhabitant. This book is the result of researching the interface between people, space and objects in an extra-terrestrial environment. The evaluation of extra-terrestrial habitats in comparison to the user’s perspective leads to a new framework, comparing these buildings from the viewpoint of human activity. It can be used as reference or as conceptual framework for the purpose of evaluation. It also summarizes relevant human-related design directions. The work is addressed to architects and designers as well as engineers.
