Histories of the Soviet / Russian Space Program - Volume 5 National Aeronautics and Space Administration (NASA), World Spaceflight News, U. S. Congress, U. S. Government, 2017-09-08 This fascinating and informative series of Soviet space program history reports concludes with a reproduction of a truly historic document: Soviet Space Programs, 1981-87. The history of the Russian spaceflight effort is chronicled in these superb Congressional Research Service reports to Congress. They provide an as-it-happened contemporaneous account of every element of the Soviet program: manned and unmanned programs, military satellite, launch sites, compendiums of official statements, plans, international participation and cosmonauts, and much more. This volume includes coverage of the Soviet version of the Space Shuttle. Every student of space flight needs to have these important reports in their collection. Salyut - The First Space Station Grujica S. Ivanovich, 2008-10-22 This remarkable book gives a comprehensive account of the longest manned space mission of the time. It details for the first time the people involved and the crews assigned to operate the first space station Salyut. The book portrays the selection of the crews, dramatic flights and tragedy of Soyuz 11. Biographies of the Soyuz 11 cosmonauts are published for the first time in English. The book relates discussions between the key personnel, and investigates the causes of the tragedy. The book ends with memories of all those affected by the DOS program and the tragedy of Soyuz 11 and looks forward to a continuation of the historic mission of Salyut.

Space Stations Ernst Messerschmid, Reinhold Bertrand, 2013-06-29 Construction has begun on the International Space Station (ISS) the largest and most complex extraterrestrial construction project ever. This book on space stations, and the ISS in particular, describes component technologies, systems integration, and the potential utilization of these stations. Co-authored by Messerschmid, one of the first German astronauts, it addresses students and engineers in space technology, but will interest astronomy and space enthusiasts as well.

Salyut : Soviet steps toward permanent human presence in space. , 2008 As the other major spacefaring nation, the Soviet Union is a subject of interest to the Congress in their deliberations concerning the future of U.S. space activities. In the course of an assessment of Civilian Space Stations (in 1983), the Office of Tech. Assessment (OTA) undertook a study of the presence of Soviets in space & their Salyut space stations. The major element in this technical memorandum was a workshop held at OTA in Dec. 1982: it was the first occasion when a significant number of experts in this area of Soviet space activities had met for extended unclassified discussion. As a result of the workshop, OTA prepared this report. Includes ¿Graphic Comparison of Soviet & U.S. Space Vehicles.¿ Illustrations.

Human Spaceflight Joseph A. Angelo, 2014-05-14 Presents an introduction to human space exploration, discussing the evolution of space technology that has allowed the human race to go from merely orbiting the Earth to landing on the Moon and living for months in a space station.

Mir Hardware Heritage David S. F. Portree, 1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M ; the Kvant, Kvant 2, and Kristall modules ; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

Space Resources John S. Lewis, Ruth A. Lewis, 1987 Although deconstruction has become a popular catchword, as an intellectual movement it has never entirely caught on within the university. For some in the academy, deconstruction, and Jacques Derrida in particular, are responsible for the demise of accountability in the study of literature. Countering these facile dismissals of Derrida and deconstruction, Herman Rapaport explores the incoherence that has plagued critical theory since the 1960s and the resulting legitimacy crisis in the humanities. Against the backdrop of a rich, informed discussion of Derrida's writings--and how they have been misconstrued by critics and admirers alike--The Theory Mess investigates the vicissitudes of Anglo-American criticism over the past thirty years and proposes some possibilities for reform.

Space Exploration and Humanity [2 volumes] American Astronautical Society, 2010-08-23 A complete history of human endeavors in space, this book also moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. In two expertly written volumes, Space Exploration and Humanity: A Historical Encyclopedia covers all aspects of space flight in all participating nations, ranging from the Cold War-era beginnings of the space race to the lunar landings and the Apollo-Soyuz mission; from the Shuttle disasters and the Hubble telescope to Galileo, the Mars Rover, and the International Space Station. The book moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. Produced in conjunction with the History Committee of the American Astronautical Society, this work divides its coverage into six sections, each beginning with an overview essay, followed by an alphabetically organized series of entries on topics such as astrophysics and planetary science; civilian and commercial space applications; human spaceflight and microgravity science; space and society; and space technology and engineering. Whether investigating a specific issue or event or tracing an overarching historic trend, students and general readers will find this an invaluable resource for launching their study of one of humanity's most extraordinary endeavors.

Life Sciences and Space Research R. Holmquist,2013-10-22 Life Sciences and Space Research, Volume XVII contains the proceedings of the Open Meeting of the Working Group on Space Biology of the Twenty-first Plenary Meeting of COSPAR, held in Innsbruck, Austria, from May 29 to June 10, 1978 and of the Symposium on Gravitational Physiology which also took place in Innsbruck, Austria, on June 2 and 3, 1978. The papers review the results of research in the life sciences with respect to space biology, including chemical data returned from the Viking Lander experiments. The engineering design of biologically closed ecological systems suitable for very long term space flight or space colonies is also described. This volume is comprised of 41 chapters and begins with a discussion on closed regenerative life support systems for space travel and their implications for ecological science. Subsequent chapters examine closed ecology in space from a bioengineering perspective; technology requirements for nonterrestrial ecosystems; carbon suboxide polymer as an explanation for the wave of darkening observed on Mars; and volcanism and soil mercury on Mars, along with their consequences for terrestrial microorganisms. The next sections focus on the biology of extreme environments such as Central Antarctica, radiation biology in space, and gravitational physiology in relation to humans and animals. This book will be of interest to space scientists, space biologists, and those engaged in the life sciences, space research, molecular biophysics, biochemistry, and physiology.

At Home in Space Ben Evans,2011-09-28 This volume, like the others, not only focuses upon the individual missions within the decade but also upon key challenges facing human space exploration at specific points within those years - from the problems of simply breathing and eating in space to the challenges of venturing outside in a pressurized spacesuit, the development of newer and better space toilets, and the difficulties of locomotion on the Moon. The Eighties was a time when traveling into space far more commonplace. Examining in detail the American and Soviet fronts, Ben Evans gives a comprehensive analysis of the varying fortunes of the U.S. space shuttle in the Eighties, including its early test flights and commercial flights, its problems, the 51L tragedy and its aftermath, and the resumption of operations with STS-26. The U.S. story ends with STS-37 in April 1991. In the Soviet sphere, two pivotal space station efforts - Salyut 7 and its successor, Mir - are considered, showing how they were alike and different.

Architecture for Astronauts Sandra Häuplik-Meusburger,2011-10-18 Living and working in extra-terrestrial habitats means being potentially vulnerable to very harsh environmental, social, and psychological conditions. With the stringent technical specifications for launch vehicles and transport into space, a very tight framework for the creation of habitable space is set. These constraints result in a very demanding "partnership" between the habitat and the inhabitant. This book is the result of researching the interface between people, space and objects in an extra-terrestrial environment. The evaluation of extra-terrestrial habitats in comparison to the user's perspective leads to a new framework, comparing these buildings from the viewpoint of human activity. It can be used as reference or as conceptual framework for the purpose of evaluation. It also summarizes relevant human-related design directions. The work is addressed to architects and designers as well as engineers.
