The Hunting of Salyut 7 Brendan Guy Alimo, 2003-03-01 The secret Cold-War Saga of the Arab-Israeli conflict. The bloody lives of two infants driven to kill each other from the day of Israel's birth - May 14, 1948 - 5th day of Iyar 5708. Born the same night to neighboring families in Old Jerusalem, Michael - an Israeli and Shabir - a Palestinian, lose everything but their lives in their fight for the Holy land. Each becomes a gladiator of the superpowers. Their battles begin in Jerusalem - known to Muslims as El Wad - expand to the land of the Pharaohs and threaten Armageddon. They will fight with Colt against Kalashnikov, Phantom against Mig, Blackbird against Foxbat. They will meet face-to-face in mortal combat in baking desert, in war-torn clouds, even the utter darkness of space. 22 years before the first tragic flight of Israeli astronaut Ilan Ramon in the Space Shuttle Columbia, Brendan Guy Alimo wrote the classic Cold War novel THE HUNTING OF SALYUT 7 that described Israeli-born Michael Allon's first flight in Columbia, about to face his nemesis, Shabir Al-Timimi, the first Palestinian cosmonaut. Readers will learn some of the incredible, untold stories of secret weapons and intelligence that led the world towards fulfillment of the prophecy of Apocalypse in the fields of Megiddo - also known as Armageddon!

Salyut - The First Space Station Grigori S.

Ivanovich, 2008-10-22 This remarkable book gives a comprehensive account of the longest manned space mission of the time. It details for the first time the people involved and the crews assigned to operate the first space station Salyut. The book portrays the selection of the crews, dramatic flights and tragedy of Soyuz 11. Biographies of the Soyuz 11 cosmonauts are published for the first time in English. The book relates discussions between the key personnel, and investigates the causes of the tragedy. The book ends with memories of all those affected by the DOS program and the tragedy of Soyuz 11 and looks forward to a

continuation of the historic mission of Salyut.

Mir Hardware Heritage David S. F. Portree,1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M ; the Kvant, Kvant 2, and Kristall modules ; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

Russian Spacesuits Isaac Abramov,Ingemar

Skoog,2003-07-02 This is the very first 'inside story' of a key part of the Soviet manned space programme, detailing the development of Soviet/Russian spacesuits. The authors, as participants in the programme, provide details of events, previously unknown in the West, including their technical development. These space suits were an important part of the many Soviet firsts in the space race – Yuri Gagarin's flight, Valentina Tereskova, the first woman in space, the first space walk by Alexei Leonov, and the first transfer on orbit from one spacecraft to another. All previous books on Soviet manned space flights focus on the spacecraft and cosmonaut teams. This book provides a total overview of the successful Soviet/Russian development of space suits and subsequent space walks from Vostok to MIR and ISS.

Cosmic Debris Jonathan Powell,2017-04-17 This book

examines the mysterious and the well-studied debris in Earth's crowded neighborhood. From orbiting comets to the workings of the Asteroid Belt, and from meteor showers to our home-grown

network of orbiting satellites, the full diversity of space objects and the debris they create is explored. Powell also discusses some of the current research techniques used to find potentially harmful rogue elements, with an emphasis on keeping watch for any objects that may intersect Earth's orbit. Such bodies also impact other worlds, and much has been learned from observing these encounters. The information in this book is intended to foster thought about the universe in which we live, but without overloading its readers with numbers and lecture-room analysis. Like a good thriller, it allows its readers to pace themselves with the story and, by the end, encourages them to draw their own conclusions.

Space Resources John S. Lewis, Ruth A. Lewis, 1987 Although deconstruction has become a popular catchword, as an intellectual movement it has never entirely caught on within the university. For some in the academy, deconstruction, and Jacques Derrida in particular, are responsible for the demise of accountability in the study of literature. Countering these facile dismissals of Derrida and deconstruction, Herman Rapaport explores the incoherence that has plagued critical theory since the 1960s and the resulting legitimacy crisis in the humanities. Against the backdrop of a rich, informed discussion of Derrida's writings--and how they have been misconstrued by critics and admirers alike--*The Theory Mess* investigates the vicissitudes of Anglo-American criticism over the past thirty years and proposes some possibilities for reform.

Walking in Space David Shayler,2004-06-03 Over the past 35 years more than 100 individual astronauts and cosmonauts have performed nearly 200 EVAs, (spacewalks), either singularly or in teams in Earth orbit, deep space or on the Moon. In 'Walking in Space: Development of Space Walking Techniques' the author, Dave Shayler, shows how hardware and crew members are prepared for, protected and supported during every EVA. He demonstrates how past experiences have led to improved training techniques and how this, in turn, has provided many successes and future developments.

Leaving Earth Robert Zimmerman,2019-02-14 In this definitive account of the quest to establish a human presence in lifeless outer space, award-winning space historian Robert Zimmerman reveals the great global gamesmanship between Soviet and American political leaders that drove the space efforts of both following the Apollo lunar landings in the 1960s and 1970s. Beaten to the Moon by their Cold War enemies, the Russians were intent on being first to the planets. They knew that to reach other worlds they needed to learn how to build interplanetary spaceships, and believed that manned space stations held the greatest promise for making that possible. Thus, from the very moment they realized they had lost the race to the Moon, the Soviet government worked feverishly to build a viable space station program - one that would dwarf the American efforts and allow the Russians to claim the vast territories of space as their own. Like the race between the tortoise and the hare, the ponderously bureaucratic Soviet Union actually managed to overtake the United States in this space station race. Their efforts - sometimes resulting in terrifying near death exploits - not only put them far ahead of NASA, it also served to reshape their own society, helping to change it from a

communist dictatorship to a freer and more capitalist society. At the same time, the American space program at NASA was also evolving, but not for the better. In fact, in many ways the two programs - and nations - were slowly but inexorably trading places. Drawing on his vast store of knowledge about space travel and modern history, as well as hundreds of interviews with cosmonauts, astronauts, and scientists, Zimmerman has superbly captured the exciting story of space travel in the last half of the twentieth century. Leaving Earth tells that story, and is required reading for space and history enthusiasts alike who wish to understand the context of the space exploration renaissance taking place now, in the twenty-first century.

The Soviet Space Programme Ronald D.

Humble, 2024-04-12 The Soviet Space Programme (1988) presents a comprehensive over-view of the Soviet space programme from its beginnings up to the end of the 1980s. One important theme explored is the degree to which the Soviet space programme was oriented towards military capabilities. The book concludes that the degree of military involvement was indeed high.
