*Urban Culture in Pre-War Japan* Adam Thorin Croft,2019-05-13 Politically the 1910s and 1920s were dark days for Japan: economic instability, frequent political assassinations, and increasing violent military interventions at home and overseas affected many. This book explores the literature of the period, showing how it contributed to this overall mood. It focuses on the Tatsukawa Library, an unusual collection of military chronicles based on traditions of popular storytelling found in the yose – a network of small theatrical venues that provided the masses living and working in Japan’s major cities with affordable entertainment. Capitalising on local advances in Western-style printing, the series facilitated a ‘new wave’ of literature that appealed especially to young, marginalised, economically-insecure urban youths. This book discusses how the narrative content of the Tatsukawa Library, which focuses on historical samurai struggling valiantly against adverse circumstances, helped inspire a generation with admiration for violence. This work also examines how this outlook fitted with the Japanese state’s reintroduction of imperial propaganda.

Gray is present, however, and he has words for the girl who's charmed his angels. The first link in this chain of misery...is you. And with that, the deliberations end, Ray's true character is revealed, and the witch trial begins!

**Angels of Death, Vol. 10** Makoto Sanada,2020-08-18 Thanks to Ray's breakdown, Zack is now forced to explore Floor B1 by himself. Yet as he continues to search the area, he finds that the many traps it hides seem to bear some connection to Ray...

*Handbook of Japanese Sociolinguistics* Yoshiyuki Asahi,Mayumi Usami,Fumio Inoue,2022-04-04 This volume is the first comprehensive survey of the sociolinguistic studies on Japanese. Japanese, like other languages, has developed a highly diverse linguistic system that is realized as variation shaped by interactions of linguistic and social factors. This volume primarily focuses on both classic and current topics of sociolinguistics that were first studied in Western languages, and then subsequently examined in the Japanese language. The topics in this volume cover major issues in sociolinguistics that also characterize sociolinguistic features of Japanese. Such topics as gender, honorifics, and politeness are particularly pertinent to Japanese, as is well-known in general sociolinguistics. At the same time, this volume includes studies on other topics such as social stratification, discourse, contact, and language policy, which have been widely conducted in the Japanese context. In addition, this volume introduces domestic approaches to sociolinguistics developed in Japan. They emerged a few decades before the development of the so-called Labovian and Hymesian sociolinguistics in the US, and they have shaped a unique development of sociolinguistic studies in Japan. Contents Part I: History Chapter 1: Research methodology Florian Coulmas Chapter 2: Japan and the international sociolinguistic community Yoshiyuki Asahi and J.K. Chambers Chapter 3: Language life Takehiro Shioda Part II: Sociolinguistic patterns Chapter 4: Style, prestige, and salience in language change in progress Fumio Inoue Chapter 5: Group language (shūdango) Taro Nakanishi Chapter 6: Male-female differences in Japanese Yoshimitsu Ozaki Part III: Language and gender Chapter 7: Historical overview of language and gender studies: From past to future Orie Endo and Hideko Abe Chapter 8: Genderization in Japanese: A typological view Katsue A. **Somaclonal Variation and Induced Mutations in Crop Improvement** S.M. Jain,D.S. Brar,B.S. Ahloowalia,1998-05-31 Genetic variability is an important parameter for plant breeders in any conventional crop improvement programme. Very often the desired variation is unavailable in the right combination, or simply does not exist at all. However, plant breeders have successfully recombined the desired genes from cultivated crop germplasm and related wild species by sexual hybridization, and have been able to develop new cultivars with desirable agronomic traits, such as high yield, disease, pest, and drought resistance. So far, conventional breeding methods have managed to feed the world's ever-growing population. Continued population growth, no further scope of expanding arable land, soil degradation, environmental pollution and global warming are causes of concern to plant biologists and planners. Plant breeders are under continuous pressure to improve and develop new cultivars for sustainable food production. However, it takes several years to develop a new cultivar. Therefore, they have to look for new technologies, which could be combined with conventional methods to create more genetic variability, and reduce the time in developing new cultivars, with early-maturity, and improved yield. The first report on induced mutation of a gene by H.J. Muller in 1927 was a major milestone in enhancing variation, and also indicated the potential applications of mutagenesis in plant improvement. Radiation sources, such as X-rays, gamma rays and fast neutrons, and chemical mutagens (e. g. , ethyl methane sulphonate) have been widely used to induce mutations.
