Integrated Lagoon Fisheries Management Shimpei Iwasaki,Rajib Shaw,2010-10-11 Lagoons are characterized by an essential quality of uncertainty for use in resource management: these are physically vulnerable to various influences from not only the environment but also the adjacent marine and terrestrial areas. This book presents a variety of lessons learned from case studies from Asian countries (India, Japan and Thailand).

Biological and Chemical Investigations of the Saroma-Resolute Project in Ice-covered Resolute Passage, 1992 Maurice Lamontagne Institute,R. E. H. Smith,S. Demers,H. Hattori,1995 The Saroma-Resolute project sought to elucidate the functioning of the biological carbon dioxide pump in sea water covered by first-year ice. The project study areas were two widely separated sites of annual ice formation: Saroma-ko Lagoon on the coast of Hokkaido, Japan, and Resolute Passage in the Arctic. This report presents data derived from samples taken from annual sea ice and the underlying water column in April-May 1992 in Resolute Passage. The sampling program covered the main period of the annual bloom of ice algae. The principal measurements included inorganic nutrients, pigments, particulate and dissolved organic carbon, plankton abundance, primary production, and nanoprotozoan feeding rates. The report includes plots illustrating the seasonal progression of snow and ice cover, irradiance, pigments, and particulate organic carbon and nitrogen in the ice.

Community Practices for Disaster Risk Reduction in Japan Rajib Shaw,2014-01-18 This book presents key lessons from community-based risk-reduction practices in Japan, a country that is often hit by disasters and that also has shown strong resilience in coping with those disasters. Japan has a strong governance system for disaster risk reduction. However, the Kobe

earthquake of 1995 showed the importance of community involvement in disaster response as well as recovery. With several examples from different parts of Japan, the book elaborates on the importance of community-based risk reduction and the innovations required for sustaining some of the community approaches. The book has 13 chapters and is divided into three parts: (1) Evolution of community-based risk reduction in Japan; (2) Community-based risk-reduction issues; and (3) Case studies. The primary target groups for this book are students and researchers in the fields of environment, disaster risk reduction, and climate change studies. The book provides them with a good idea of the current research trends in the field and furnishes basic knowledge about these vital topics. Another target group comprises practitioners and policy makers, who will be able to apply the knowledge collected here to policy and decision-making.

Analyzing the Physics of Radio Telescopes and Radio Astronomy Yeap, Kim Ho,Hirasawa, Kazuhiro,2020-02-07 In the field of astrophysics, modern developments of practice are emerging in order to further understand the spectral information derived from cosmic sources. Radio telescopes are a current mode of practice used to observe these occurrences. Despite the various accommodations that this technology offers, physicists around the globe need a better understanding of the underlying physics and operational components of radio telescopes as well as an explanation of the cosmic objects that are being detected. *Analyzing the Physics of Radio Telescopes and Radio Astronomy* is an essential reference source that discusses the principles of the astronomical instruments involved in the construction of radio telescopes and the analysis of cosmic sources and celestial objects detected by this machinery. Featuring research on topics such as electromagnetic theory, antenna design, and geometrical optics, this book is ideally designed for astrophysicists, engineers, researchers, astronomers, students, and educators seeking coverage on the operational methods of radio telescopes and understanding the physical processes of radio astronomy.

Remote Sensing of Hydrometeorological Hazards George P. Petropoulos, Tanvir Islam, 2017-11-02 Extreme weather and climate change aggravate the frequency and magnitude of disasters. Facing atypical and more severe events, existing early warning and response systems become inadequate both in scale and scope. Earth Observation (EO) provides today information at global, regional and even basin scales related to agrometeorological hazards. This book focuses on drought, flood, frost, landslides, and storms/cyclones and covers different applications of EO data used from prediction to mapping damages as well as recovery for each category. It explains the added value of EO technology in comparison with conventional techniques applied today through many case studies.
