Land, Power and Prestige David T. Yates,2007-08-01 A major phase of economic expansion occurred in southern England during the second and early first millennium BC, accompanied by a fundamental shift in regional power and wealth towards the eastern lowlands. This book offers a synthesis of available data on Bronze Age lowland field systems in England, including a gazetteer of sites. The research demonstrates the importance of large-scale animal husbandry in the mixed farming regimes as evidenced in the design of the field systems which incorporate droveways, stock proof fencing, watering holes, cow pens, sheep races and gateways for stockhandling. It is argued that the field systems represented a form of conspicuous production, an intensification of agrarian endeavour or a statement of intent, to be understood in relation to the maintenance, display and promotion of hierarchical social systems involved in exchange with their counterparts across the English Channel.

Shipping and Globalization in the Post-War Era Niels P. Petersson,Stig Tenold,Nicholas J. White,2019-11-21 This open access book belongs to the Maritime Business and Economic History strand of the Palgrave Studies in Maritime Economics book series. This volume highlights the contribution of the shipping industry to the transformations in business and society of the postwar era. Shipping was both an example and an engine of globalization and structural change. In turn, the industry experienced and pioneered, mirrored and enabled key developments that led to the present-day globalized economy. Contributions address issues such as the macro-level shift of shipping's centre of gravity from Europe to Asia, the political and legal frameworks within which it developed, the strategies and performance of both successful and unsuccessful firms, and the links between the shipping industry and the wider economy and society. Without shipping and its ability to forge connections and networks of a global reach, the modern world would look very different. By bringing together scholars from various disciplinary and national backgrounds, this book advances our understanding of the linkages that bind economies and societies together.

Alternative Pathways to Complexity Lane F. Fargher,Verenice Y. Heredia Espinoza,2016-12-15 Alternative Pathways to Complexity focuses on the themes of architecture, economics, and power in the evolution of complex societies. Case studies from Mesoamerica, Asia, Africa, and Europe examine the relationship between political structures and economic configurations of ancient chiefdoms and states through a framework of comparative archaeology. A group of highly distinguished scholars takes up important issues, theories, and methods stemming from the nascent body of research on comparative archaeology to showcase and apply important theories of households, power, and how the development of complex societies can be extended and refined. Drawing on the archaeological, ethnohistorical, and ethnographic records, the chapters in this volume contain critical investigations on the role of collective action, economics, and corporate cognitive codes in structuring complex societies. Alternative Pathways to Complexity is an important addition to theoretical development and empirical research on Mesoamerica, the Old World, and cross-cultural studies. The theoretical implications addressed in the chapters will have broad appeal for scholars grappling with alternative pathways to complexity in other regions as well as those addressing diverse cross-cultural research. Laura Bassi and Science in 18th Century Europe Monique Frize,2013-07-08 This book presents the extraordinary story of a Bolognese woman of the settecento. Laura Maria Caterina Bassi (1711-1778) defended 49 Theses at the University of Bologna on April 17, 1732 and was awarded a doctoral degree on May 12 of the same year. Three weeks before her defense, she was made a member of the Academy of Sciences in Bologna. On June 27 she defended 12 additional Theses. Several of the 61 Theses were on physics and other science topics. Laura was drawn by the philosophy of Newton at a time when most scientists in Europe were still focused on Descartes and Galen. This last set of Theses was to encourage the University of Bologna to provide a lectureship to Laura, which they did on October 29, 1732. Although quite famous in her day, Laura Bassi is unfortunately not remembered much today. This book presents Bassi within the context of the century when she lived and worked, an era where no women could attend university anywhere in the world, and even less become a professor or a member of an academy. Laura was appointed to the Chair of experimental physics in 1776 until her death. Her story is an amazing one. Laura was a mother, a wife and a good scientist for over 30 years. She made the transition from the old science to the new very early on in her career. Her work was centered on real problems that the City of Bologna needed to solve. It was an exciting time of discovery and she was at the edge of it all the way.

Toxic Cyanobacteria in Water Ingrid Chorus,Martin Welker,2021-03-08 Cyanobacterial toxins are among the hazardous substances most widely found in water. They occur naturally, but concentrations hazardous to human health are usually due to human activity. Therefore, to protect human health, managing lakes, reservoirs and rivers to prevent cyanobacterial blooms is critical. This second edition of Toxic Cyanobacteria in Water presents the current state of knowledge on the occurrence of cyanobacteria and cyanotoxins as well as their impacts on health through water-related exposure pathways, chiefly drinking-water and recreational activity. It provides scientific and technical background information to support hazard identification, assessment and prioritisation of the risks posed by cyanotoxins, and it outlines approaches for their management at each step of the water-use system. It sets out key practical considerations for developing management strategies, implementing efficient measures and designing monitoring programmes. This enables stakeholders to evaluate whether there is a health risk from toxic cyanobacteria and to mitigate it with appropriate measures. This book is intended for those working on toxic cyanobacteria with a specific focus on public health protection. It intends to empower professionals from different disciplines to communicate and cooperate for sustainable management of toxic cyanobacteria, including public health workers, ecologists, academics, and catchment and waterbody managers. Ingrid Chorus headed the department for Drinking-Water and Swimming-Pool Hygiene at the German Environment Agency. Martin Welker is a limnologist and microbiologist, currently with bioMérieux in Lyon, France.

Proceedings of the Third European Conference on Mathematics in Industry J. Manley,S. McKee,D.R. Owens,2012-12-06 The European Consortium for Mathematics in Industry (ECMI) was founded, largely due to the driving energy of Michiel Hazewinkel on the 14th April, 1986 in Neustadt-Mussbach in West Germany. The founder signatories were A. Bensoussan (INRIA, Paris), A. Fasano (University of Florence), M. Hazewinkel (CWI, Amsterdam), M. Heilio (Lappeenranta University, Finland), F. Hodnett (University of Limerick, Ireland), H. Martens (Norwegian Institute of Technology, Trondheim), S. McKee (University of Strathclyde, Scotland), H. NeURzert (University of

Kaiserslautern, Germany), D. Sundstrom (The Swedish Institute of Applied Mathematics, Stockholm), A. Tayler (University of Oxford, England) and Hj. Wacker (University of Linz, Austria). The European Consortium for Mathematics in Industry is dedicated to: (a) promote the use of mathematical models in Industry (b) educate industrial mathematicians to meet the growing demand for such experts (c) operate on a European scale. ECMI is still a young organisation but its membership is growing fast. Although it has still to persuade more industrialists to join, ECMI certainly operates on a European scale and a flourishing postgraduate programme with student exchange has been underway for some time. It is perhaps fitting that the first open meeting of ECMI was held at the University of Strathclyde in Glasgow. Glasgow is and was the industrial capital of Scotland and was, and arguably still is, Britain's second city after London; when this volume appears it will have rightly donned the mantle of the cultural capital of Europe.

Supernatural Selection Matt Rossano,2010-05-28 In 2006, scientist Richard Dawkins published a blockbuster bestseller, *The God Delusion*. This atheist manifesto sparked a furious reaction from believers, who have responded with numerous books of their own. By pitting science against religion, however, this debate overlooks what science can tell us about religion. According to evolutionary psychologist Matt J. Rossano, what science reveals is that religion made us human. In *Supernatural Selection*, Rossano presents an evolutionary history of religion. Neither an apologist for religion nor a religion-basher, he draws together evidence from a wide range of disciplines to show the valuable--even essential--adaptive purpose served by systematic belief in the supernatural. The roots of religion stretch as far back as half a million years, when our ancestors developed the motor control to engage in social rituals--that is, to sing and dance together. Then, about 70,000 years ago, a global ecological crisis drove humanity to the edge of extinction. It forced the survivors to create new strategies for survival, and religious rituals were foremost among them. Fundamentally, Rossano writes, religion is a way for humans to relate to each other and the world around them--and, in the grim struggles of prehistory, it offered significant survival and reproductive advantages. It emerged as our ancestors' first health care system, and a critical part of that health care system was social support. Religious groups tended to be far more cohesive, which gave them a competitive advantage over non-religious groups, and enabled them to conquer the globe. Rather than focusing on one aspect of religion, as many theorists do, Rossano offers an all-encompassing approach that is rich with surprises, insights, and provocative conclusions.

Marine Auxiliary Machinery David W. Smith,J. Crawford,P. S. Moore,2016-01-11 *Marine Auxiliary Machine: Sixth Edition* explains the correct operation and maintenance of marine auxiliary machinery. The book discusses topics such as the arrangements of the engine and boiler room; pipes and fittings and pumps; compressors and separators; and heat exchangers - its types, control of temperature, and maintenance. The book also talks about other machineries such as diesel engines, steam turbines, propellers, and gears; refrigeration and air conditioning systems; deck machinery; and safety equipment. The text is recommended for engineers in ships who would like to know more about the auxiliary machines onboard ships, how they are operated, and the principles behind them.

Environment and Settlement Ingrid Ystgaard,2020-10-09 During the Late Bronze Age, the Iron Age and early medieval period (c. 600 BC-AD 1250) settlement at Vik in the Ørland peninsula emerged, flourished, vanished and emerged anew. Local landscape and vegetation development, cross-regional cultural developments and global climatic events were of great significance to the farmer-fisher communities at Vik throughout these periods. In this book, results from the 2014-2016 archaeological excavations at Ørland main air base have been refined and developed. The 13 papers deal with landscape, vegetation and environmental aspects related to the excavated settlement, as well as the spatial and social organization of the built environment. Building traditions, disposal practices, the form and representation of everyday objects, subsistence and landscape use are central to the discussions. Invasive Species and Human Health Giuseppe Mazza,Elena Tricarico,2018-07-13 Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human health. This includes not only direct effects through contact with the species via bites, wounds and disease, but also indirect effects caused by changes induced in ecosystems by invasive species, such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa (animals and plants), and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritizing approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species (invertebrates and fishes), amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public, including researchers of biological invasions, doctors, policy-makers and managers, and students of invasive species in ecology, animal and plant biology and public health medicine.

The Sciences in the European Periphery During the Enlightenment K. Gavroglu,2013-03-07 The articles in this volume of ARCHIMEDES examine particular cases of 'reception' in ways that emphasize pressing historiographical and methodological issues. Such issues arise in any consideration of the transmission and appropriation of scientific concepts and practices that originated in the several 'centers' of European learning, subsequently to appear (often in considerably altered guise) in regions at the European periphery. They discuss the transfer of new scientific ideas, the mechanisms of their introduction, and the processes of their appropriation at the periphery. The themes that frame the discussions of the complex relationship between the origination of ideas and their reception include the ways in which the ideas of the Scientific Revolution were introduced, the particularities of their expression in each place, the specific forms of resistance encountered by these new ideas, the extent to which such expression and resistance displays national characteristics, the procedures through which new ways of dealing with nature were made legitimate, and the commonalities and differences between the methods developed by scholars for handling scientific issues.

Global Enterprises and the World Economy Carl H. A. Dassbach,1989 The author presents case studies of Ford Motor Company, General Motors, and IBM (International Business Machines) and examines their organizational patterns in the context of the economic and political features of the world economy during the three specific time periods of 1905-1927, 1958-1965, and 1963-1980. Aspects of initial organizational structures, corporate crises, the impact of World War I and World War II on global businesses, corporate efforts at domestic and overseas expansion, and product diversification are discussed.

Handbook of Automotive Power Electronics and Motor Drives Ali Emadi,2017-12-19 Initially, the only electric loads encountered in an automobile were for lighting and the starter motor. Today, demands on performance, safety, emissions, comfort, convenience, entertainment, and communications have seen the working-in of seemingly innumerable advanced electronic devices. Consequently, vehicle electric systems require larger capacities and more complex configurations to deal with these demands. Covering applications in conventional, hybrid-electric, and electric vehicles, the Handbook of Automotive Power Electronics and Motor Drives provides a comprehensive reference for automotive electrical systems. This authoritative handbook features contributions from an outstanding international panel of experts from industry and

academia, highlighting existing and emerging technologies. Divided into five parts, the Handbook of Automotive Power Electronics and Motor Drives offers an overview of automotive power systems, discusses semiconductor devices, sensors, and other components, explains different power electronic converters, examines electric machines and associated drives, and details various advanced electrical loads as well as battery technology for automobile applications. As we seek to answer the call for safer, more efficient, and lower-emission vehicles from regulators and consumer insistence on better performance, comfort, and entertainment, the technologies outlined in this book are vital for engineering advanced vehicles that will satisfy these criteria.
