North American X-15 Peter E. Davies,2017-05-18 The revolutionary X-15 remains the fastest manned aircraft ever to fly. Built in the two decades following World War II, it was the most successful of the high-speed X-planes. The only recently broken 'sound barrier' was smashed completely by the X-15, which could hit Mach 6.7 and soar to altitudes above 350,000ft, beyond the edge of space. Several pilots qualified as astronauts by flying above 50 miles altitude in the X-15, including Neil Armstrong, the first man on the Moon. The three X-15s made 199 flights, testing new technologies and techniques which greatly eased America's entry into manned space travel, and made the Apollo missions and Space Shuttle viable propositions. With historical photographs and stunning digital artwork, this is the story of arguably the greatest of the X-Planes.

The Book of Proverbs, Chapters 15-31 Bruce K. Waltke,2005-03-15 Over twenty-five years in the making, this much-anticipated commentary promises to be the standard study of Proverbs for years to come. Written by eminent Old Testament scholar Bruce Waltke, this two-volume commentary is unquestionably the most comprehensive work on Proverbs available. Grounded in the new literary criticism that has so strengthened biblical interpretation of late, Waltke's commentary on Proverbs demonstrates the profound, ongoing relevance of this Old Testament book for Christian faith and life. A thorough introduction addresses such issues as text and versions, structure, authorship, and theology. The detailed commentary itself explains and elucidates Proverbs as theological literature. Waltke's highly readable style -- evident even in his original translation of the Hebrew text -- makes his scholarly work accessible to teachers, pastors, Bible students, and general readers alike.

Tocharian and Indo-European Studies vol.15 Birgit Anette Olsen,Michaël Peyrot,Georges-Jean Pinault,Thomas Olander,2014-12-22 Tocharian and Indo-European Studies is the central publication for the study of two closely related languages, Tocharian A and Tocharian B. Found in many Buddhist manuscripts from central Asia, Tocharian dates back to the second half of the first millennium of the Common Era, though it was not discovered until the twentieth century. Focusing on both philological and linguistic aspects of this language, Tocharian and Indo-European Studies also looks at it in relationship to other Indo-European languages. This issue addresses topics such as the function and origin of the present suffix -sk, verbal endings, the words for fear and perfume, secular documents, and Tocharian glosses in Sanskrit manuscripts. Birgit Anette Olsen is a researcher and instructor at the University of Copenhagen and author of Derivation and Composition and The Noun in Biblical Armenian. Michaël Peyrot is a postdoctoral researcher at the University of Vienna. Georges-Jean Pinault is professor at the École pratique des hautes études in Paris. Thomas Olander is a researcher and instructor at the University of Copenhagen.

X-15 John Anderson,Richard Passman,2014-02-15 The concise illustrated history of the first space plane, featuring exclusive photographs. The exciting story of the X-15—the iconic rocket plane of the Cold War space race is recounted by John Anderson, curator of aerodynamics at the Smithsonian National Air and Space Museum. This experimental space plane was on the cutting edge of hypersonic aerodynamics, and its winged reentry from space foreshadowed the development of the Space Shuttle decades later. Launched from the wing of a modified B-52 bomber—again foretelling a concept that would be used decades later, in this case by SpaceShipOne and SpaceShipTwo—the ship rocketed higher and faster than any manned aircraft of the time. Designed to approach seven times the speed of sound, it was the first hypersonic aircraft ever created and was engineered to function both in the Earth's atmosphere and at the edge of space. Illustrated with period NASA and USAF photographs, as well as exclusive Smithsonian photography of the first of three X-15s built, X-15 captures the risks and dangers of the X-15 program as Anderson follows the test pilots (including Neil Armstrong) who pushed the very limits of their piloting skills to master groundbreaking experimental technology. Even with the fatal crash of the third X-15, the overall success of the program helped pave the way for NASA to continue to the Moon—and this is the definitive, expertly curated, and beautifully illustrated account of its development. Praise for X-15 “[X-15] lays out the case for why the X-15 was and continues to be such an important aircraft. This book makes the reader want to visit the National Air and Space Museum and view the X-15 up-close in a whole new light, in which its aerospace accomplishments rank alongside other distinguished aircraft on display at the museum.”

—DefenseMediaNetwork.com “The authors have crafted an excellent introductory story for this aircraft. This book is a good read and I can highly

recommend it to anyone who wants to start to learn about this most remarkable airplane.” —International Plastic Modelers Society
