Thomas C. Kelly

M3A1 Scout Car David Doyle,2019-02-28 The M3A1 Scout Car, produced by White Motor Company of Cleveland, Ohio, served as the US Cavalry's primary scouting and reconnaissance vehicle during the early days of the US entry into WWII. A powerful Hercules engine, four-wheel drive, and relatively light weight gave the vehicle both impressive on-road speed and reasonable off-road maneuverability. Typically armed with a trio of heavy and light machine guns, the vehicle was not intended to slug it out with the enemy, but rather to locate the enemy and, through its impressive array of radio equipment, report the positions to more heavily armed forces. Through dozens of archival photos, including previously unpublished images, as well as details of some of the finest existing examples, this iconic vehicle is explored and its history is explained. Part of the Legends of Warfare series.

The Boy Scout Automobilists Edward Maitland,2023-07-18 The Boy Scout Automobilists by Robert Maitland is an exhilarating tale that combines the spirit of adventure with the principles of the Boy Scouts. Set in a time when automobiles were a new and exciting technology, this captivating story follows a group of Boy Scouts as they embark on a thrilling journey, exploring the open road and putting their scouting skills to the test. Led by their courageous and resourceful scoutmaster, Mr. Howard, the Boy Scout troop dives headfirst into the world of automobilism. They learn about the mechanics of cars, the rules of the road, and the importance of safety. With their knowledge and determination, they transform an old, run-down automobile into a magnificent vehicle capable of taking them on unforgettable adventures. As the boys hit the road, they encounter a series of challenges and obstacles that test their skills and character. From navigating treacherous mountain roads to aiding stranded travelers, the Boy Scout Automobilists exemplify the values of teamwork, preparedness, and service to others. Along the way, they learn important lessons about responsibility, perseverance, and the power of friendship. Through their expeditions, the Boy Scouts explore the wonders of the natural world, marvel at the beauty of scenic landscapes, and experience the thrill of self-reliance. They develop a deep appreciation for the environment and learn to care for it, always leaving their campgrounds cleaner than they found them. The Boy Scout Automobilists is not just a thrilling adventure; it also emphasizes the importance of responsible automobile use and upholding the principles of scouting. The story highlights the positive impact that young individuals can have on their communities when they embody the spirit of scouting and use their skills for the betterment of others. With its blend of exciting escapades, practical knowledge, and moral lessons, The Boy Scout Automobilists captures the essence of the Boy Scouts and inspires young readers to embrace the values of courage, preparedness, and service. Comparison of the Future Scout Vehicle Using the Janus(A) High Resolution Combat Model John L. Salvetti,Naval Postgraduate School (U.S.),1994 The purpose of this thesis is to investigate the effects of four different types of scout vehicles when performing a zone reconnaissance as part of a battalion movement-to-contact. The four different types are the

current HMMWV (Highly Mobile Multi-Purpose Wheeled Vehicle), and three variants of the future scout vehicle (heavy, moderate, and light). The analysis used the Janus(A) High Resolution Combat Model with a southwest Asia scenario. Operators at Fort Knox, KY and at the Naval Postgraduate School conducted the simulation. Six measures of effectiveness (MOEs) were used in the study. To detect any significant differences between the vehicles each alternative was compared using Scheffe's and Tukey's Methods of Multiple Comparisons. The Hierarchical Additive Weighting Method was used to rank the alternatives to determine the best vehicle suited for conducting this specific mission. The results from the data collected from both sets of operators indicate that the heavy variant of the FSV is the best vehicle for the zone reconnaissance mission.

Transonic Wind-tunnel Investigation of the Static Longitudinal Aerodynamic Characteristics of Several Configurations of the Scout Vehicle and of a Number of Related Models Thomas C. Kelly, 1961 Results have been obtained in the Langley 8-foot transonic pressure tunnel at Mach numbers from 0.40 to 1.20 for several configurations of the Scout vehicle and for a number of related models. Tests extended over an angle-of-attack range from about -10 degrees to 10 degrees at a Reynolds number per foot of about 3.8×10^6 .

Considerations Affecting Satellite and Space Probe Research with Emphasis on the "scout" as a Launch Vehicle Jack Posner, 1961 This report reviews a number of the factors which influence space flight experiments. Included are discussions of payload considerations, payload design and packaging, environmental tests, launch facilities, tracking and telemetry requirements, data acquisition, processing and analysis procedures, communication of information, and project management. Particular emphasis is placed on the Scout as a launching vehicle. The document includes a description of the geometry of the Scout as well as its flight capabilities and limitations. Although oriented toward the Scout vehicle and its payload capabilities, the information presented is sufficiently general to be equally applicable to most space vehicle systems.

M3 / M3a1 Scout Car and M2 Mortar Motor Carriage Technical Manual War Department, 2012-07 Designed and built by the White Motor Company, the M3 Scout Car saw service as a command vehicle, ambulance, gun tractor and patrol and scout vehicle during WWII. Over 21,000 were built between 1937 and 1944 - the vast majority of them

the M3A1 variant, which had a longer and wider hull than the original production vehicles. Both the M3 and M3A1 had a six cylinder gas engine (a diesel variant M3A1E1 was produced for a short time), and could carry up to seven men at a top speed of 55-65 mph depending on configuration. Both had a radiator protected by an armored shutter, and a shatter-proof windshield. The M3A1 also carried a front-mounted roller to prevent it from bogging down on muddy ground, and could carry three machine guns (two .30 calibers and one .50) on a hull-mounted skate rail. The M3A1 saw service in the Pacific, North Africa and Europe, with over 3,000 handed to the Soviet Union via lend-lease. While it performed admirably enough in the field the open top design, light armament and poor off-road characteristics led most Army units to replace it with the M8 armored car and M20 utility car by 1944. Originally produced in 1941, this technical manual was standard issue to M3, M3A1, and M2 crews. Originally restricted, this manual was declassified long ago and is here reprinted in book form.

Terrain Analysis for the Armored Reconnaissance Scout Vehicle Test Program

D. D. Randolph, C. A. Blackmon, ARMY ENGINEER WATERWAYS EXPERIMENT STATION VICKSBURG MISS., 1974 Two study areas totaling approximately 11 sq miles, were selected at Fort Knox, Kentucky, for comparison with a previously mapped 60-sq-mi sample of terrain in West Germany and as potential areas for field tests with the prototype Armored Reconnaissance Scout Vehicles and comparison vehicles. Areal and linear terrain data from 119 sites, aerial photographs, and other pertinent information were used to prepare the Fort Knox terrain factor complex maps. These areal maps describe the terrain characteristics that affect vehicle performance, i.e. soil type, soil strength, topographic slope, obstacles, vegetation, surface roughness, and visibility. The linear terrain factor complex maps describe the terrain characteristics that determine 'go or no-go' vehicle performance, i.e. linear feature geometry, water depth, and water velocity.

Investigation of the Aerodynamic Characteristics of Two Preliminary Designs of Scout Research Vehicle at Mach Numbers from 1.77 to 4.65 Robert J. Keynton, Ann B. Fichter, 1961

American Wheeled Armoured Fighting Vehicles Michael Green, 2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the [Stryker]. To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

U.S. Half-Track Vehicles in Action David Doyle, 2017 United States manufacturers produced more than 40,000 halftracks from 1933 until 1944. These mostly-armored vehicles moved artillery and infantry on rough terrain, snow and sand during World War II and Korea. Based on an adaptation of the White Scout Car, the US half-track vehicles of WWII combined the cross-country ability of a fully-tracked vehicle with the road performance of a medium truck. Variations of these vehicles included prime movers, armored personnel carriers, mortar carriers and a wide range of heavily armed variants. Vehicles produced by Autocar, Diamond T and White were used by U.S. forces, while similar International

Harvester-built vehicles were supplied to our Allies through Lend-Lease. Both the Army and Marines took them into battle. They left their mark in Africa, Europe, Pacific islands and Korea. When the U.S. entered Vietnam, French halftracks were already in country. Before retirement, the Israeli Army listed about 600 halftracks in March 2008. Argentina donated its final 24 M9s to Bolivia in 2006.
