The Amphigeo Story Mark Roehrig,2002 Amphibious vehicles were some of the first self propelled vehicles ever created going all the way back to 1805. The only Factory produced amphibian was the Amphicar in the 60's. Just some of the facts about amphibians that are dispelled in *The Amphigeo Story*. Today more than ever the world is ready for such a vehicle, one that you can drive around doing errands as well as tear down a boat ramp into the froth. The Amphigeo is for the masses, two thirds of the planet is covered in water, and 70% of the world's population lives on the water or very near. Why then should it be we have to own a boat and a car to take advantage of both mediums of transportation? Not anymore, Mark Roehrig has developed the simplest conversion ever conceived for putting a car into the water. His Amphigeo took just 5 months to build; his second would only take about 3 months, for now he knows all the secrets and shortcuts, which is exactly what prompted him to write *The Amphigeo Story*. Now anyone can own an amphibious car, at the lowest price ever imagined, in fact the Amphigeo is just that, the world's best bargain in an amphibian. The Amphigeo makes use of many of the original parts, including engine, transmission, CV axles, steering, suspension, seats, dash, radiator, fans, fuel tank and more. This car has changed his life, everywhere he goes crowds gather, the press and TV has loved doing the story. But Mark will tell you none of that surpasses driving in the water, it is his ultimate reward, and after 2 years the Amphigeo's design has proved reliable. If you're ready for the experience of a lifetime, this books for you, you could build an Amphigeo or have one built, but owning one will definitely put an end to the everyday doldrums. Any car can drive into the water, only a good one can drive out again.

Ocean Innovation Iain A. Anderson, Julian Vincent, John Montgomery, 2016-03-30 Biomimetics is the idea of creating new technologies abstracted from what we find in biology. *Ocean Innovation: Biomimetics Beneath the Waves* seeks that technological inspiration from the rich biodiversity of marine organisms. Bringing both a biological and engineering perspective to the biomimetic potential of oceanic organisms, this richly illustrated book investigates questions such as: How can we mimic the sensory systems of sea creatures like sharks, sea turtles, and lobsters to improve our ability to navigate underwater? What can we do to afford humans the opportunity to go unnoticed by marine life? How can we diffuse oxygen from water to enable deep diving without the risk of decompression sickness? Each chapter explores an area where we, as divers and technologists, can benefit from understanding how animals survive in the sea, presenting case studies that demonstrate how natural solutions can be applied to mankind's engineering challenges.

Advances in Space Science and Technology Frederick I. Ordway, 2014-12-02 *Advances in Space Science and Technology*, Volume 9 provides information pertinent to the science and technology of space flight. Organized into six chapters, this volume begins with an overview of the varied requirements of life forms on Earth. This text then examines the possible chemical composition of the soil as well as air pressure, radiation, light, and

atmospheric composition. Other chapters consider the intriguing theory that fossil life exists on or beneath a hypothetical buried frozen ocean. This book discusses as well the problems of conducting meaningful measurements with fly-through, fly-by, and lander probes. The reader is also introduced to the possible interior composition of the other planets. The final chapter examines the composition of the Sun both theoretically and spectroscopically. This book is a valuable resource for astronomers, astrogeologists, scientists, research workers, and engineers.
