Safety is No Accident—From 'V' Bombers to Concorde John R. W. Smith,2020-07-19 A behind-the-scenes look at the aeronautical engineers who keep the skies safe. Many are surprised to learn that flying is, statistically, the safest means of transportation. Even less well known is the crucial role that flight test observers and engineers play in ensuring that level of safety. In this book, one of them recounts his experience as an aeronautical engineer working in partnership with test pilots, painting a vivid portrait of his flight-testing career from the 1960s to early 1980s at Avro and the UK's Civil Aviation Authority (CAA). During the author's time at Avro, he flew on the development and certification test flights of the Avro 748, 748MF, Shackletons, Nimrod, and Handley-Page Victor tanker. In the CAA, his role turned to regulation, making flight test assessments of manufacturer's prototypes and production aircraft, to check compliance with the CAA's flight safety requirements. The scope ranged from single-engine light aircraft to large civil transport aircraft. It involved frequent visits to foreign manufacturers and also included his participation in the CAA's Concorde certification flight test program. Advancements in the understanding of aerodynamics and an increasingly professional approach to risk management improved safety, but flight testing still involves risk, and several of the author's close friends and colleagues died in flight test accidents during this period. It is because of the courage and expertise of such people that millions of flights now touch down safely each year.

The Causal Structure of Long-Term Supply Relationships Gjalt de Jong,Bart Nooteboom,2012-12-06 Long-term supply relationships are of crucial importance in industrial organization. The present (r)evolution in information and communication technology such as e-business is proof of the increasingly dynamic environment in which firms operate. As a result, firms have to focus on their core competencies and obtain complementary ones from partner firms to be able to survive. This can hardly be realized without having long-term supply relationships. In the past decades, research on strategic alliances -the class of interfirm arrangements to which long-term supply relationships belong mushroomed. Many of the (empirical) studies in the alliance literature focus on a single variable that is then explained by a set of independent variables. For example, for international joint ventures the level of commitment, interdependence, asymmetry, and dedicated investments explains the development of trust. By itself there is nothing wrong in this approach. On the contrary, because of all these studies we now have some knowledge about the reasons why firms enter in alliances and why some alliances are more successful than others. In fact, one of our first studies also belonged to this research-tradition.
