Final Environmental Assessment for a Launch Operator License for Sea Launch Limited Partnership ,2001

Lessons from Sea Launch ,2001 This paper looks at the problems with space launch and what the United States can do to improve it. Specifically, the paper presents the argument that military space launch is not changing with the times and there are innovative ideas in the commercial launch sector, particularly the Sea Launch Program, from which the United States can learn. Primarily, the United States needs to make spacelift more affordable, reliable, and responsive because providing robust spacelift, that meets these standards, will support the US national security and economy. The research methodology included analysis of existing literature, congressional records, and interviews.

Routledge Handbook of Space Law Ram S. Jakhu,Paul Stephen Dempsey,2016-11-10 This handbook is a reference work providing a comprehensive, objective and comparative overview of Space Law. The global space economy reached $330 billion in 2015, with a growth rate of 9 per cent vis-à-vis the previous year. Consequently, Space Law is changing and expanding expeditiously, especially at the national level. More laws and regulations are being adopted by space-faring nations, while more countries are adapting their Space Laws and regulations related to activities in outer space. More regulatory bodies are being created, while more regulatory diversity (from public law to private law) is being instituted as increasing and innovative activities are undertaken by private entities which employ new technologies and business initiatives. At the international level, Space Law (both hard law and soft law) is expanding in certain areas, especially in satellite broadcasting and telecommunications. The Routledge Handbook of Space Law summarises the existing state of knowledge on a comprehensive range of topics and aspires to set the future international research agenda by indicating gaps and inconsistencies in the existing law and highlighting emerging legal issues. Unlike other books on the subject, it addresses major international and national legal aspects of particular space activities and issues, rather than providing commentary on or explanations about a particular Space Law treaty or national regulation. Drawing together contributions from leading academic scholars and practicing lawyers from around the world, the volume is divided into five key parts: • Part I: General Principles of International Space Law • Part II: International Law of Space Applications • Part III: National Regulation of Space Activities • Part IV: National Regulation of Navigational Satellite

Systems • Part V: Commercial Aspects of Space Law This handbook is both practical and theoretical in scope, and may serve as a reference tool to academics, professionals and policy-makers with an interest in Space Law.

High Seas Satellite Launches Daniel Kempton,Susan Balc,2016 This case study is designed to highlight, on the one hand, the inevitable tradeoffs between the benefits of international trade and cooperation in high-technology industries; and on the other, the dangers of leaking dangerous, defense-related technology. It centers on a frustrating dilemma that confronted John D. Holum, the State Department's Acting Undersecretary of State for Arms Control and International Security Affairs. State's Office of Defense Trade Control (ODTC), which Holum oversaw, had just completed an investigation of the Sea Launch satellite launching system that uncovered 207 violations of the U.S. Arms Export Control Act and the International Traffic in Arms Regulations.

The Politics of Space Eligar Sadeh,2010-11 The pace of space exploration has long been dictated by political motivations. This book helps to explain why this is so in the post-Cold War era. Combining essays, a glossary of terms, tables and statistics, this new title from Routledge comes as a welcome addition to this increasingly popular topic. The book:covers theories and concepts, as well as current issuesgives a background to international and national space agenciescontains essays that cover military, commercial and governmental actors in space politics.

Outlook on Space Law Over the Next 30 Years Daphné Crowther,2023-12-14 This book is neither a historical treatise on the genesis and development of space law, nor a survey of the corpus, nor even a work of legal makebelieve, but simply an essay pursuing a line of enquiry opened up by the members of the European Centre for Space Law. It sets out to chart future trends in the light of the emergence of space law as a branch of international law and of the development of space activities themselves (new activities, new players, interpenetration of space law and national laws), a branch in which the rules and forms of international cooperation acquire a new dimension, transcending the concept of `global' law. It is essentially prompted by a deep aspiration to see a rebirth - a revival - of that law.
