Asphalt Pavements Patrick Lavin,2003-09-02 Asphalt Pavements provides the know-how behind the design, production and maintenance of asphalt pavements and parking lots. Incorporating the latest technology, this book is the first to focus primarily on the design, production and maintenance of low-volume roads and parking areas. Special attention is given to determining the traffic capacity, required thickness and asphalt mixture type for parking applications. Topics covered include: material information such as binder properties, testing grading and selection; construction information such as mixing plant operation, proportioning, mixture placement and compaction; and design information such as thickness and mixture design methods and guidelines on applying these to highways, city streets and parking Areas. It is an essential practical guide aimed at those engineers and architects who are not directly involved in the asphalt industry, but who nonetheless need to have a good general knowledge of the subject. Asphalt Pavements provides a novice with enough information to completely design, construct and specify an asphalt pavement.

Automation and Robotics in Construction XI Alan Chamberlain,2012-12-02 Sourced from international experts, this book presents papers dealing with a wide range of soft and hard research issues at various stages of development in the field. Some cover entirely new ground, whilst others reflect progress on the sometimes frustrating path to truly robust technology. Of particular interest are contributions discussing issues of exploitation and commercialisation, the integration of end products within the design and construction processes incorporating information technology (IT) and the impact of the emerging technology on the culture and organisation of the construction industry. A mark of growing maturity is apparent in the coverage of health and safety and related social issues. This is complemented by a clear commitment to the consideration of human factors and the environment. It is hoped that by promoting a wider debate on the matters of future technology and its horizons, on the identification of what industry needs from the research and development community and on building effective partnerships between academia, industry and government, the publication not only addresses the practical commercial obligation to seek robust solutions for today's problems, but will stimulate research for the years to come.

Development of the Sealzall Machine Duane Bennett,Stephen A. Velinsky,2009 The AHMCT Research Center, together with Caltrans, has been leading a multi-year research effort to develop innovative high production crack sealing equipment, which improves safety while reducing costs. The Sealzall Machine development project is the latest version of a line of successful longitudinal crack sealing machine prototypes developed and deployed with Caltrans on California highways. The program's key technical element has been the application of automation technologies and custom engineering solutions to achieve increased sealing efficiencies and to eliminate the workers' exposure to highway traffic. The preceding Transfer Tank Longitudinal Sealer (TTLS) development project produced a prototype high production longitudinal sealing application vehicle and a large capacity transfer kettle trailer designed to efficiently resupply and support high production highway sealing operations. Defective commercial sealant melting equipment had rendered the TTLS equipment effectively unusable for general deployment. In addition to replacing deficient components, Caltrans requested inclusion of additional features to further enhance functionality. The most significant upgrade was to add in-lane sealing capabilities. An electrically heated sealant hose and application wand assembly was developed on the front of the application machine to support manual in-lane crack sealing capabilities. The rebuilt TTLS application vehicle was then renamed Sealzall to reflect the expanded sealing capabilities. The Sealzall machine retains the continuous 2-5 mph moving lane closure longitudinal sealing functionally first developed for the TTLS with the additional features of compressed air blast crack cleaning and hot sealant recirculation. The Sealzall will ultimately be turned over to Caltrans for full highway operational deployment.--Tech report doc. page.

State-of-the-art Survey of Flexible Pavement Crack Sealing Procedures in the United States Robert A. Eaton,Cold Regions Research and Engineering Laboratory (U.S.),1992 A survey of all 50 United States was conducted in September of 1990 to determine the state of the art of crack sealing procedures on flexible asphalt concrete pavements. The results were tabulated and a summary report prepared. A meeting was held at the U.S. Army Cold Regions Research and Engineering Laboratory to discuss the draft report; the comments and suggestions received were incorporated into this report. At the meeting the group identified the need for a trade organization to develop uniform specifications and terminology and to promote proper equipment, methodology, materials, training and education in the pavement crack sealing industry.

The Seal's Miracle Baby Laura Marie Altom,2015-06-02 SHE BROKE HIS HEART Jessie Long knew she made the right decision years ago. Grady Matthews wanted a ranch and a home full of kids, and she couldn't give him that. So she cut him loose for his own good. They went their separate ways--Grady left to join the Navy and Jessie stayed home. Now a deadly twister has flattened their hometown, and it's brought them back together--and back to square one. The passion's still there, and the easy understanding. Even the way they care for the orphaned baby found in the aftermath just seems to fit. For Grady, that's enough. He's sure they can make a life together. But for Jessie, the secret that tore them apart is still hiding under the surface. And she can't face losing Grady a second time.

Witches, Druids, and Sin Eaters Jon G. Hughes,2022-09-20 A guide to ancient beliefs including instructions for magic and spellcasting • Describes the arcane rituals, ancient beliefs, and secret rites of the Welsh Marches, including those of the Sin Eaters, Eye Biters, and Spirit Hunters • Shares extracts from ancient texts stored in the archives of the National Museum of Wales, along with many original photographs of related artifacts • Includes a Grimoire of the Welsh Marches, a wide collection of spells and magical workings along with practical instruction on crafting and casting In this collaboration between a Druid and a witchcraft researcher, Jon G. Hughes and Sophie Gallagher describe in intricate detail the arcane rituals, ancient beliefs, and secret rites of the Welsh Marches, the borderlands between Celtic Wales and Anglo-Saxon England--one of the oldest and most significant locations for early witchcraft and a lasting repository for ancient Druidic lore. The authors explore the repressed rituals and practices of sin eaters, those who take upon themselves the sins of a recently deceased person; eye biters, powerful Witches able to cast malevolent curses simply by looking at their victims; and spirit hunters, Witches who gain control of their victim's spirit. Drawing on their personal access to the archives of the National Museum Wales, as well as the local museums found within the Welsh Marches, the authors share extracts from ancient texts, along with original photographs of related artifacts, such as charm and spell bottles used to ward off evil and "poppets," wax effigies crafted by Witches to inflict pain and death on a targeted subject. In the second half of the book, the authors present a Grimoire of the Welsh Marches, a wide collection of spells and magical workings along with practical instruction on crafting and casting. Offering a comprehensive look at the earth-based beliefs and practices of primal witchcraft and Druidic lore, the authors show not only how the traditions of the Welsh Marches had a profound influence on the cultural and spiritual history of the British Isles but also how their influence was exported to all corners of the world.

Crack Sealing Methods and Materials for Flexible Pavements Michael C. Belangie,1985 This study used over forty-four lane miles of test site to gather up to three years of comparative performance data on thirteen crack sealants. The data indicates that the more durable, high ductility materials when applied in a band-aid configuration can be expected to give significantly better performance than the lower ductility materials used by the Utah DOT prior to 1983. Evaluation of sealant placement procedures indicates that routing is a questionable practice, and that the hot compressed air lance may significantly improve the performance of materials placed during cold or wet conditions. Evaluation of UDOT maintenance activities indicates that sealant melters cannot achieve or maintain the required sealant application temperatures under colder winter conditions. The efficiency of melter units should be improved or not operated under those conditions. More accurate temperature gauges on melter units should be acquired. Inaccurate gauges may cause impaired sealant performance and safety.
