*The Biology and Management of Capricornis and Related Mountain Antelopes* Hiroaki Soma, 2012-12-06

The Japanese serow (*Capricornis crispus*) has been protected by law since 1955 in Japan, because it was becoming rarer and approaching extinction. Thereafter, the serow population has increased gradually. The Japanese serow is thought to be a primitive relict species on the islands of Japan, and the geographical range of the serow has retracted upwards into the mountain forests to avoid contact with humans. Little was therefore known about these animals. However, increasing losses of forest habitat due to exploitation of the mountain forests or expanding cultivation by local foresters have driven the Japanese serow back into the lowlands of Japan. Since then, complaints of damage to trees and other vegetation have accumulated against the serow. In some prefectures the shooting of Japanese serow was allowed in order to prevent damage to forests. The animals killed were taken for research by the Departments of the Environment and by universities. was set up at the summit of Mt. Gozaisho, The Japan Serow Center Komono-cho, Mie Prefecture, in 1962 and has made a great effort to breed the serow and its related species in captivity. In addition, the International Studbook of Capricornis *crispus* in captivity was established in Japan, and the state of breeding of the Japanese serows is now reported annually. However, without detailed scientific research, it is impossible to conduct sensible protection, conservation or management of the serow in captivity or in the wild.

*Monogamy* Ulrich H. Reichard, Christophe Boesch, 2003-09-11 This book explores the biological roots of social, sexual and reproductive monogamy in birds, mammals and humans.

Description of a New Species of Serow from Yün-nan Province, China Roy Chapman Andrews, 1921

**One Medicine** O.A. Ryder, M.L. Byrd, 1984-05 This is a quite exceptional book, a lively and approachable treatment of an important field of mathematics given in a masterly style. Assuming only a school background, the authors develop locally Euclidean geometries, going as far as the modular space of structures on the torus, treated in terms of Lobachevsky's non-Euclidean geometry. Each section is carefully motivated by discussion of the physical and general scientific implications of the mathematical argument, and its place in the history of mathematics and philosophy. The book is expected to find a place alongside classics such as Hilbert and Cohn-Vossen's 'Geometry and the imagination' and Weyl's 'Symmetry'.

*Sika Deer: Life History Plasticity and Management* Koichi Kaji, Hiroyuki Uno, Hayato Iijima, 2022-06-20

This book provides complete and up-to-date information on sika deer biology and its management, focusing on their life history with an integrated approach of population dynamics, morphology, genetics, and evolution. The expanding distribution of sika and its increase in population in Japan and other countries are causing damage to agriculture and forestry, impacting ecosystems and affecting other species. We are facing conflicting deer issues regarding the conservation of resource values and pest control of sika deer. This contributed volume compiles new findings focusing on the ecological plasticity of the sika deer. It aims to clarify the ecological characteristics of the deer by integrating studies of different approaches and provides a perspective for their management. The book consists of six parts. Part I introduces the ecological and management background behind the history of sika deer. The following four parts discuss movement ecology (Part II), impact on vegetation and bottom-up effect on sika deer (Part III), impact on ecosystem and its resilience (Part IV), and comparison of life-history characteristics between sika deer and other ungulate species (Part V). The last part (Part VI) covers the science-based management of sika deer. Contributed by recognized experts and young researchers of sika deer, this book appeals to researchers and professionals in wildlife biology and wildlife management, evolution, population dynamics, morphology, genetics, and reproductive physiology.

**Nurses in the Workplace** Marie E. Cowart, William J. Serow, 1992-02-19 The dynamics of the workplace for nurses are examined in this volume from the perspective of four health care industries. Focusing on acute care hospitals, nursing homes, home health agencies and hospices, the contributors

explore crucial issues for nursing and for health care systems. They present an extensive literature review on the causes and impacts of the US nursing shortage, introduce projections for the need for nurses and scrutinize recent policies. Results from a survey of hospitals, nursing homes, community-based employment and temporary staff agencies are discussed and integrated with interpretations of market forces.
