Ancient Greek Houses and Households Bradley A. Ault,Lisa C. Nevett,2011-01-01 Seeking to expand both the geographical range and the diversity of sites considered in the study of ancient Greek housing, *Ancient Greek Houses and Households* takes readers beyond well-established studies of the ideal classical house and now-famous structures of Athens and Olynthos. Bradley A. Ault and Lisa C. Nevett have brought together an international team of scholars who draw upon recent approaches to the study of households developed in the fields of classical archaeology, ancient history, and anthropology. The essays cover a broad range of chronological, geographical, and social contexts and address such topics as the structure and variety of households in ancient Greece, facets of domestic industry, regional diversity in domestic organization, and status distinctions as manifested within households. *Ancient Greek Houses and Households* views both Greek houses and the archeological debris found within them as a means of investigating the basic unit of Greek society: the household. Through this approach, the essays successfully point the way toward a real integration between material and textual data, between archeology and history. Contributors include William Aylward (University of Wisconsin, Madison), Nicholas Cahill (University of Wisconsin, Madison), Manuel Fiedler (Freie Universität, Berlin), Franziska Lang (Humboldt Universität, Berlin), Monike Trümper (Universität Heidelberg), and Barbara Tsakirgis (Vanderbilt University, Nashville).

Performing Dream Homes Emily Klein,Jennifer-Scott Mobley,Jill Stevenson,2019-01-22 This anthology explores how theatre and performance use home as the prism through which we reconcile shifts in national, cultural, and personal identity. Whether examining parlor dramas and kitchen sink realism, site-specific theatre, travelling tent shows, domestic labor, border performances, fences, or front yards, these essays demonstrate how dreams of home are enmeshed with notions of neighborhood, community, politics, and memory. Recognizing the family home as a symbolic space that extends far beyond its walls, the nine contributors to this collection study diverse English-language performances from the US, Ireland, and Canada. These scholars of theatre history, dramaturgy, performance, cultural studies, feminist and gender studies, and critical race studies also consider the value of home at a time increasingly defined by crises of homelessness – a moment when major cities face affordable housing shortages, when debates about homeland and citizenship have dominated international elections, and when conflicts and natural disasters have displaced millions. Global struggles over immigration, sanctuary, refugee status and migrant labor make the stakes of home and homelessness ever more urgent and visible, as this timely collection reveals.

Roman Art in the Private Sphere Elaine K. Gazda,Anne E. Haeckl,1991 This is a stimulating book and should be compulsory reading for all students of Roman art. ---Classical Review For all the authors, attention to the ensemble, a sense of the relation between the formal and the iconographic, and the desire to historicize their material contribute to making this anthology unusual in its rigorous and creative attention to the way that art and architecture participate in the construction of the image of the Roman elite. ---Art Bulletin *Roman Art in the Private Sphere* presents an impressive case for the social and art historical importance of the paintings, mosaics, and sculptures that filled the private houses of the Roman elite. The six essays in this volume range from the first century B.C.E. to the fourth century C.E., and from the Italian peninsula to the Eastern Empire and North African provinces. The essays treat works of art that belonged to every major Roman housing type: the single-family atrium houses and the insula apartment blocks in Italian cities, the dramatically sited villas of the Campanian coast and countryside, and the palatial mansions of late antique provincial aristocrats. In a complementary fashion the essays consider domestic art in relation to questions of decorum, status, wealth, social privilege, and obligation. Patrons emerge as actively interested in the character of their surroundings; artists appear as responsive to the desire of their patrons. The evidence in private art of homosexual conduct in high society is also set forth. Originality of subject matter, sophisticated appreciation of stylistic and compositional nuance, and philosophical perceptions of the relationship of humanity and nature are among the themes that the essays explore. Together they demonstrate that Roman domestic art must be viewed on its own terms. Elaine K. Gazda is Professor of the History of Art and Curator of Hellenistic and Roman Antiquities at the Kelsey Museum of Archaeology, University of Michigan.

The Architecture of Home in Cairo Mohamed Gamal Abdelmonem,2016-03-03 The hawari of Cairo - narrow non-straight alleyways - are the basic urban units that have formed the medieval city since its foundation back in 969 AD. Until early in the 20th, they made up the primary urban divisions of the city and were residential in nature. Contemporary hawari, by contrast, are increasingly dominated by commercial and industrial activity. This medieval urban maze of extremely short, broken, zigzag streets and dead ends are defensible territories, powerful institutions, and important social systems. While the hawari have been studied as an exemplar for urban structure of medieval Islamic urbanism, and as individual building typologies, this book is the first to examine in detail the socio-spatial practice of the architecture of home in the city. It investigates how people live, communicate and relate to each other within their houses or shared spaces of the alleys, and in doing so, to uncover several new socio-spatial dimensions and meanings in this architectural form. In an attempt to re-establish the link between architecture past and present, and to understand the changing social needs of communities, this book uncovers the notion of home as central to understand architecture in such a city with long history as Cairo. It firstly describes the historical development of the domestic spaces (indoor and outdoor), and provides an

inclusive analysis of spaces of everyday activities in the hawari of old Cairo. It then broadens its analysis to other parts of the city, highlighting different customs and representations of home in the city at large. Cairo, in the context of this book, is represented as the most sophisticated urban centre in the Middle East with different and sometimes contrasting approaches to the architecture of home, as a practice and spatial system. In order to analyse the complexity and interconnectedness of the components and elements of the hawari as a 'collective home', it layers its narratives of architectural and social developments as a domestic environment over the past two hundred years, and in doing so, explores the in-depth social meaning and performance of spaces, both private and public.

Urbanism in the Aegean Bronze Age Keith Branigan, 2002-04-01 State-formation and the emergence of civilization have been two of the major arenas of debate in Aegean prehistory for the last twenty five years. The process of urbanization has therefore been at the forefront of scholarly debate. Bronze Age towns, however, have largely been ignored, particularly at a generalized level. Research has usually focused on their architecture, and particularly their elite or public architecture, rather than their general nature and character, and many studies have been restricted to a single town or even a single building. This volume redresses the balance and draws attention and thought not only to urban settlements as a whole but to their social and economic roles, their demographic significance and ultimately to their character and personality.

Intelligent Computing Kohei Arai, Supriya Kapoor, Rahul Bhatia, 2018-11-01 This book, gathering the Proceedings of the 2018 Computing Conference, offers a remarkable collection of chapters covering a wide range of topics in intelligent systems, computing and their real-world applications. These submissions underwent a double-blind peer review process. Of those 568 submissions, 192 submissions (including 14 poster papers) were selected for inclusion in these proceedings. Despite computer science's comparatively brief history as a formal academic discipline, it has made a number of fundamental contributions to science and society—in fact, along with electronics, it is a founding science of the current epoch of human history ('the Information Age') and a main driver of the Information Revolution. The goal of this conference is to provide a platform for researchers to present fundamental contributions, and to be a premier venue for academic and industry practitioners to share new ideas and development experiences. This book collects state of the art chapters on all aspects of Computer Science, from classical to intelligent. It covers both the theory and applications of the latest computer technologies and methodologies. Providing the state of the art in intelligent methods and techniques for solving real-world problems, along with a vision of future research, the book will be interesting and valuable for a broad readership.
