**Stalin's Ocean-going Fleet** Mikhail Monakov, Jurgen Rohwer, 2012-11-12 A study of the development of strategic concepts in Stalin's Navy, in the context of his foreign/defence policy, using original archival documents translated from the Russian.

Stalin's Ocean-going Fleet: Soviet Jurgen Rohwer, 2017-07-05 In this work, two senior naval historians analyze the discussions held in leading Soviet political, military, and naval circles concerning naval strategy and the decisions taken for warship-building programmes. They describe the reconstitution of the fleet under difficult conditions from the end of the Civil War up to the mid-1920s, leading to a change from classical naval strategy to a Jeune école model in the first two Five-Year Plans, including efforts to obtain foreign assistance in the design of warships and submarines. Their aim is to explain the reasons for the sudden change in 1935 to begin building a big ocean-going fleet. After a period of co-operation with Germany from 1939-41, the plans came to a halt when Hitler attacked the Soviet Union in 1941. Finally, this work covers the reopening of the naval planning processes in 1944 and 1945 and the discussions of the naval leadership with Stalin, the party and government officials about the direction of the new building programmes as the Cold War began.

*Earthquake Research and Analysis* Sebastiano D'Amico, 2012-02-08 This book is devoted to different aspects of earthquake research. Depending on their magnitude and the placement of the hypocenter, earthquakes have the potential to be very destructive. Given that they can cause significant losses and deaths, it is really important to understand the process and the physics of this phenomenon. This book does not focus on a unique problem in earthquake processes, but spans studies on historical earthquakes and seismology in different tectonic environments, to more applied

studies on earthquake geology.

Only elementary proofs are provided, and thus the mathematics and statistics are maintained at a basic level. Only a course in each of three areas — advanced calculus, probability and statistical inference — is assumed of the student. The book has a chapter on applications to biostatistics and a supplement presenting computer programs for selected sequential procedures. Identified problems are provided at the end of each chapter.
