## **Foundations of Russian Military Flight, 1885-1925**

James K Libbey, 2019-05-15 Foundations of Russian Military Flight focuses on the early use of balloons and aircraft by the Russian military. The best early Russian aircraft included flying boats designed by Dimitrii Grigorovich and large reconnaissance-bombers created by Igor Sikorsky. As World War I began, the Imperial Russian Navy made use of aircraft more quickly than the army. Indeed, the navy established a precursor to the aircraft carrier. The Imperial Russian Army came to respect over time the work of aircraft that evolved from reconnaissance and bomber to fighter planes. Over 250 army pilots during the war received awards of high distinction for their wartime flights. After the 1917 revolution, both the new Bolshevik government and the reactionary White forces created air arms to combat each other. In the 1920s, the Soviet Union and Germany negotiated agreements that allowed Germany to violate the Treaty of Versailles by building military aircraft and training German military pilots in the USSR. This provided the Soviet Union access to the latest aviation technology and prevented them from falling too far behind the West in this crucial sphere.

## **Democracy In The Russian School** Ben

Eklof, 2019-08-22 Framed by an introductory essay by Ben Eklof, the translated documents in this volume are crucial to understanding Russian educational reform efforts. These primary sources, based on previously unpublished statistical data and public opinion surveys, depict current conditions in Russia's schools. Reflecting the approach of the leading historian of education Edward Dneprov-now the powerful minister of education serving under Boris Yeltsin-the documents describe the radical reform philosophy and program first published in Teachers' Gazette in 1988, which

now serve as the operative legislation for all secondary schools. The VNIK (Temporary Scientific Research Collective on the Schools) reform movement is a fascinating microcosm of perestroika in terms of goals, mobilization, and the complicated, painful process of implementation. This unique glimpse into Russian education in a period of turmoil will interest all those who follow Russian politics and society.

**The Osprey Encyclopedia of Russian Aircraft** Bill Gunston, 2000-05-25 Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.

From Tsarism to the New Economic Policy R. W. Davies, 1990-06-18 A comparison between the tsarist economy on the eve of the revolution and the Soviet economy in the mid-1920s. Questions posed include, was the tsarist economy successful, but destroyed by World War I? And was the breakdown of the mixed economy of the 1920s an arbitrary political act?

**Alexander P. de Seversky and the Quest for Air Power** James K. Libbey, 2013-08-31 Today, air power is a vital component of the U.S. armed forces. James Libbey, in *Alexander P. de Seversky and the Quest for Air Power*, highlights the contributions of an aviation pioneer who

made much of it possible. Graduating from the Imperial Russian Naval Academy at the start of World War I, de Seversky lost a leg in his first combat mission. He still shot down thirteen German planes and became the empire's most decorated combat naval pilot. While serving as a naval attache in the United States in 1918, de Seversky elected to escape the Bolshevik Revolution and offered his services as a pilot and consulting engineer to the U.S. War Department. He proved inventive both in the technology of advanced military aircraft and in the strategy of exercising air power. He worked for famed aviation advocate Gen. William Billy Mitchell, who encouraged the naturalized citizen to patent his inventions, such as an in-flight refueling system and a gyroscopically synchronized bombsight. His creative spirit then spurred him to design and manufacture advanced military aircraft. When World War II broke out in Europe, de Seversky became America's best-known philosopher, prophet, and advocate for air power, even serving as an adviser to the chief of staff of the U.S. Air Force. The highlight of his life occurred in 1970 when the Aviation Hall of Fame enshrined de Seversky for his achievements as a pilot, aeronautical engineer, inventor, industrialist, author, strategist, consultant, and scientific advances in aircraft design and aerospace technology. This book will appeal to readers with a special interest in military history and to anyone who wants to learn more about American air power's most important figures.

**Far Eastern Overexposure** Paul Tweiten, 2011-11 On the brink of being divorced, feeling like a cast-aside, middle-aged man, American forestry professional Paul Tweiten accepts a job that casts him into anything but the familiar. In the summer of 1995, he leaves the United States to manage a remote timber harvest organization in Siziman Bay in the Russian Far East. In this novel, Tweiten narrates the story of his experiences traveling to a foreign country, not speaking the language and not knowing what to expect. Life in the isolated camp is nothing like he could imagine. *Far Eastern Overexposure* shows how he overcame the challenges of being thrown into both an unfamiliar culture and lifestyle. Meeting colorful Russian characters and gaining lifelong friends, Tweiten transitions from being

completely lost and confused to that of understanding how to become a successful businessman in Russia. Far Eastern Overexposure mixes business with pleasure while providing colorful insight into the Russian country and culture.
