Shenzhou 10, 2010

Shenzhou Philippe Coué, 2022 This book presents the history of the manned space programme of the People's Republic of China. For the first time, all Shenzhou flights are described in detail, up to Shenzhou-10. Shenzhou-11 is described comprehensively in Jing & Chen. This account is accompanied by the early days of these flights and several future guessing elements based on the most recent Chinese statements. Shenzhou is also a compilation of information obtained mostly from Chinese press websites since the late 1990s. Monitoring Chinese space activities over short periods of time is never very productive. However, one in three articles always includes one or two lines of unpublished information. They cannot be detected by the layperson or the general information journalist who will tend to focus on sources that emphasize immediacy and impact. But the time of the media has nothing to do with the time spent by the collector, the explorer and above all the investigator. With China, you only win in the long run. One piles up, tests the assembly, sorts and starts again until he gets an image that is consistent in technical and astronautic terms and that fits well in the Chinese context. As you will have understood, capturing information and piling up files is not enough; a systemic approach is needed to give the most comprehensive view of the subject. The resulting added value can be substantial. This is the approach that has been followed and the reader will be the judge of whether this target has been reached.

Shenzhou Spacecraft and Lunar Exploration Project Weiren Wu, 2008

Space Wei Qi: The Launch of Shenzhou V. ,2004 Wei Qi is the favorite Chinese board game chess with more than two hundred pieces rather than sixteen, allowing for significantly increased strategic complexity. When Lieutenant Colonel Yang Liwei lifted off into space from China's Jiuquan launch site just after 9 am on 15 October 2003, returning twenty-one hours later after sixteen orbits around the earth China made a significant geostrategic Wei Qi move. China views long-term geostrategic politics as having about the same number of possible permutations as a Wei Qi board, and it is posturing accordingly. The Shenzhioti V launch was part of that posturing. Perched atop a Long March (CZ-2F) launcher, the Shenzhioti V spacecraft took China's first taikonaut on a trip thoroughly rehearsed during four unmanned precursor missions. Within China, a publicity campaign was carefully crafted to bring interest and national pride to a peak at the time of the event. Worldwide, media attention was considerable. Prelaunch speculation about the implications of the Chinese manned space program ranged from dubbing it a stunt to speculation about a new space race, to angst over its potential military significance.

Lunar Outpost Erik Seedhouse, 2009-04-22 Lunar Outpost provides a detailed account of the various technologies, mission architectures, medical requirements and training needed to return humans to the Moon within the next decade. It focuses on the means by which a lunar outpost will be constructed and also addresses major topics such as the cost of the enterprise and the roles played by private companies and individual countries. The return of humans to the surface of the Moon will be critical to the exploration of the solar system. The various missions are not only in pursuit of scientific knowledge, but also looking to extend human civilization, economic expansion, and public engagement beyond Earth. As well as NASA, China's Project 921, Japan's Aerospace Exploration Agency, Russia, and the European Space Agency are all planning manned missions to the Moon and, eventually, to Mars. The Ares-I and Ares-V are the biggest rockets since the Saturn V and there is much state-of-the-art technology incorporated into the design of Orion, the spacecraft that will carry a crew of four astronauts to the Moon. Lunar Outpost also describes the human factors, communications, exploration activities, and life support constraints of the missions.

Shuttles and Space Missions Giles Sparrow, Judith John, Chris McNab, 2015-12-15 Shuttles and Space Missions examines topics on space exploration, from early orbital missions to the first astronauts on the moon. Detailed illustrations and clear charts help explain these complicated topics.

China in Space Brian Harvey, 2019-10-08 In 2019, China astonished the world by landing a spacecraft and rover on the far side of the Moon, something never achieved by any country before. China had already become the world's leading spacefaring nation by rockets launched, sending more into orbit than any other. China is now a great space superpower alongside the United States and Russia, sending men and women into orbit, building a space laboratory (Tiangong) and sending probes to the Moon and asteroids. Roadmap 2050 promises that China will set up bases on the Moon and Mars and lead the world in science and technology by mid-century. China's space programme is one of the least well-known, but this book will bring the reader up to date with its mysteries, achievements and exciting plans. China has built a fleet of new, powerful Long March rockets, four launch bases, tracking stations at home and abroad, with gleaming new design and production facilities. China is poised to build a large, permanent space station, bring back lunar rocks, assemble constellations of communications satellites and send spaceships to Mars, the moons of Jupiter and beyond. A self-sustaining lunar base, Yuegong, has already been simulated. In space, China is the country to watch.

When China Goes to the Moon... Marco Aliberti, 2015-07-04 This book is about China's ambitions in its most complex and internationally visible space endeavor, namely its human space exploration programme. It provides a comprehensive reflection on China's strategic direction and objectives in space, including in particular those set forth in its human spaceflight programme and analyses the key domestic and external factors affecting the country's presumed manned lunar ambitions. The objective of the book is to disentangle the opportunities and challenges China's space ambitions are creating for other spacefaring nations and for Europe in particular. It therefore includes an in-depth analysis of possible European postures towards China in space exploration and seeks to stimulate a debate on future space strategies in the broader context of world politics.

Chinese Space Policy Roger Handberg, Zhen Li, 2006-11-29 This volume explains the beginnings and expansion of China's space program, analyzing how China is now able to hold such ambitions and how the interaction between technology, politics and economics has influenced the Chinese space program. It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort, later focusing upon its development over the past decade and into the future. As China is now able to reach into outer space with its machines and, since 2003, with its humans, the authors examine how this move from a non-participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty-first century. They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space 'powers', such as the United States and the former Soviet Union: what is the value of the space program, given its high costs and likelihood of dramatic failure? Chinese Space Policy

will be of great interest to students of space studies, Chinese politics, security studies, and international relations in general.

China's Space Programme S. Chandrashekar, 2022-05-05 This book comprehensively covers the history and current developments of space programme of China. It presents the complete story of China's space programme from its origins through to present day activities on the International Space Station. This monograph further discusses the role of China's space strategy in its emergence as a major power on the world stage. The book also presents the context of China's space program within the larger narrative of international space development. The book binds together the diverse political, military, economic and technology aspects into a coherent understanding and explains their role in the establishment and growth of Chinese space programme. Given the contents, this book will be a valuable source of information for students, researchers, and historians in the area of space studies.

Manned Spaceflight Britannica Educational Publishing, 2009-10-01 Space travel is a familiar concept. Such was not the case in the early 20th century, when the United States and the former Soviet Union were locked in a race to send humans into orbit. This book details the history of manned spaceflight, from the development of rockets to the advent of space tourism. Readers also are introduced to the men and women who have been willing to soar into the great unknown.

Spacecraft Michael H. Gorn, 2018-09-04 Spacecraft takes a long look at humankind's attempts and advances in leaving Earth through incredible illustrations and authoritatively written profiles on Sputnik, the International Space Station, and beyond. In 1957, the world looked on with both uncertainty and amazement as the Soviet Union launched Sputnik 1, the first man-made orbiter. Sputnik 1 would spend three months circling Earth every 98 minutes and covering 71 million miles in the process. The world's space programs have traveled far (literally and figuratively) since then, and the spacecraft they have developed and deployed represent almost unthinkable advances for such a relatively short period. This ambitiously illustrated aerospace history profiles and depicts spacecraft from Sputnik 1 through the International Space Station, and everything in between, including concepts that have yet to actually venture outside the Earth's atmosphere. Illustrator and aerospace professional Giuseppe De Chiara teams up with aerospace historian Michael Gorn to present a huge, profusely illustrated, and authoritatively written collection of profiles depicting and describing the design, development, and deployment of these manned and unmanned spacecraft. Satellites, capsules, spaceplanes, rockets, and space stations are illustrated in multiple-view, sometimes cross-section, and in many cases shown in archival period photography to provide further historical context. Dividing the book by era, De Chiara and Gorn feature spacecraft not only from the United States and Soviet Union/Russia, but also from the European Space Agency and China. The marvels examined in this volume include the rockets Energia, Falcon 9, and VEGA; the Hubble Space Telescope; the Cassini space probe; and the Mars rovers, Opportunity and Curiosity. Authoritatively written and profusely illustrated with more than 200 stunning artworks, Spacecraft: 100 Iconic Rockets, Shuttles, and Satellites That Put Us in Space is sure to become a definitive guide to the history of manned space exploration.

Religious Faith of the Chinese Xinping Zhuo, 2017-12-26 This book comprehensively examines religious faith in China from the perspective of cultural philosophy and cultural history. It explores the social, political, cultural and spiritual meanings of religions, tracing their historical development and related paradigm shifts. It also analyzes the characteristics of the country's local religions and the process of indigenization of world religions, and describes the peaceful co-existence and harmonious confluence of multiple religions in Chinese spiritual life, revealing the vibrant and diverse colors of its religious culture. Examining these religions' social and cultural functions in contemporary Chinese society, the book demonstrates the rich and complex intertwinement of religious faith, cultural spirit and national disposition among the Chinese people.

The New Space Race: China vs. USA Erik Seedhouse, 2010-04-06 The world's most populous nation views space as an asset, not only from a technological and commercial perspective but also from a political one. The repercussions of this ideology already extend far beyond Washington. China vs. the United States explores future Chinese aspirations in space and the implications of a looming space race. Dr. Seedhouse provides background information on the fifteen-year history of the China National Space Administration and its long list of accomplishments. Sino-U.S. technological and commercial interests in space are discussed, including their interest in encouraging a potential space race. The national security objectives of the U.S. and China are also examined.

Star Trek Shipyards Star Trek Starships: 2151-2293 **The Encyclopedia of Starfleet Ships** Ben Robinson, Marcus Reily, 2018-09-25 For the first time ever, a chronological history of the Starfleet starships from Star Trek television shows and films! Profiles more than 250 years worth of Starfleet ships! Including Zefram Cochrane's ship The Phoenix, which made the first faster-than-light journey in human history, through Captain Kirk's famous Enterprise up to the Enterprise-B: the ship where Kirk was lost. Plus all of the Starfleet ships from the STAR TREK: DISCOVERY TV series! This in-depth reference book includes a technical overview and operational history for each ship and is illustrated with CG artwork, including original VFX models made for the TV show. Includes THE ENTERPRISE NX-01, THE U.S.S. DISCOVERY & THE U.S.S. ENTERPRISE NCC-1701 STAR TREK SHIPYARDS is a series of lavishly illustrated books that provide in-universe profiles of STAR TREK ships. Each ship is profiled with technical information, its operational history and much more.

Space Exploration and Humanity [2 volumes] American Astronautical Society, 2010-08-23 A complete history of human endeavors in space, this book also moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. In two expertly written volumes, Space Exploration and Humanity: A Historical Encyclopedia covers all aspects of space flight in all participating nations, ranging from the Cold War-era beginnings of the space race to the lunar landings and the Apollo-Soyuz mission; from the Shuttle disasters and the Hubble telescope to Galileo, the Mars Rover, and the International Space Station. The book moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. Produced in conjunction with the History Committee of the American Astronautical Society, this work divides its coverage into six sections, each beginning with an overview essay, followed by an alphabetically organized series of entries on topics such as astrophysics and planetary science; civilian and commercial space applications; human spaceflight and microgravity science; space and society; and space technology and engineering. Whether investigating a specific issue or event or tracing an overarching historic trend, students and general readers will find this an invaluable resource for launching their study of one of humanity's most extraordinary endeavors.
