The New Space Race: China vs. USA Erik Seedhouse,2010-04-06 The world's most populous nation views space as an asset, not only from a technological and commercial perspective but also from a political one. The repercussions of this ideology already extend far beyond Washington. *China vs. the United States* explores future Chinese aspirations in space and the implications of a looming space race. Dr. Seedhouse provides background information on the fifteen-year history of the China National Space Administration and its long list of accomplishments. Sino-U.S. technological and commercial interests in space are discussed, including their interest in encouraging a potential space race. The national security objectives of the U.S. and China are also examined.

*China in Space* Brian Harvey,2019-10-08 In 2019, China astonished the world by landing a spacecraft and rover on the far side of the Moon, something never achieved by any country before. China had already become the world's leading spacefaring nation by rockets launched, sending more into orbit than any other. China is now a great space superpower alongside the United States and Russia, sending men and women into orbit, building a space laboratory (Tiangong) and sending probes to the Moon and asteroids. Roadmap 2050 promises that China will set up bases on the Moon and Mars and lead the world in science and technology by mid-century. China's space programme is one of the least well-known, but this book will bring the reader up to date with its mysteries, achievements and exciting plans. China has built a fleet of new, powerful Long March rockets, four launch bases, tracking stations at home and abroad, with gleaming new design and production facilities. China is poised to build a large, permanent space station, bring back lunar rocks, assemble constellations of communications satellites and send spaceships to Mars, the moons of Jupiter and beyond. A self-sustaining lunar base, Yuegong, has already been simulated. In space, China is the country to watch.

*China Listed Companies Handbook (Vol. 6)* Shenzhen Securities Information CO. LTD,1900  
*Space Exploration and Humanity [2 volumes]* American Astronautical Society,2010-08-23 A complete history of human endeavors in space, this book also moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. In two expertly written volumes, *Space Exploration and Humanity: A Historical Encyclopedia* covers all aspects of space flight in all participating nations, ranging from the Cold War-era beginnings of the space race to the lunar landings and the Apollo-Soyuz mission; from the Shuttle disasters and the Hubble telescope to Galileo, the Mars Rover, and the International Space Station. The book moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. Produced in conjunction with the History Committee of the American Astronautical Society, this work divides its coverage into six sections, each beginning with an overview essay, followed by an alphabetically organized series of entries on topics such as astrophysics and planetary science; civilian and commercial space applications; human spaceflight and microgravity science; space and society; and space technology and engineering. Whether investigating a specific issue or event or tracing an overarching historic trend, students and general readers will find this an invaluable resource for launching their study of one of humanity's most extraordinary endeavors.

**Manned Spaceflight Log II—2006-2012** David J. Shayler,Michael D. Shayler,2013-04-05 "Manned Spaceflight Log" discusses over 40 recent spaceflights from September 2006 through September 2012, a time of great change in human spaceflight history. Following on from "Praxis Manned Spaceflight Log 1961-2006," the authors continue the story until the end of September 2012, with new chapters detailing the development and accomplishments of human spaceflight, expanded tables and additional photographs, many in color, throughout. The book opens with a new foreword by Colonel Alfred M. Worden, USAF Retired, NASA Astronaut and CMP of Apollo 15, which

reflects on the changing history of human spaceflight and the prospects for future operations. The first chapter explains how human spaceflight has approached the different challenges of exploring space and provided the hardware to meet those challenges. This chapter also describes the various attempts to reach orbital flight and the often confusing distinction between ballistic, sub-orbital, and so-called 'astro-flights' of the X-15 rocket research aircraft program. Chapter 2 recalls key historic moments and missions across five decades of human spaceflight. Each decade has provided useful lessons for the next and a foundation for future achievement. The new mission entries are collected in the third section in chronological order. A review of the next steps in human spaceflight, including plans to occupy the International Space Station well into the 2020s and the growth of the Chinese manned space program including a large space station and planned base on the Moon, is discussed in Chapter 4. The tables provide a complete up-to-date overview of human spaceflight operations and experience from April 1961 to September 2012 and a selected chronology of important milestones from those years. Completing the book is a comprehensive bibliography that lists all the major Springer-Praxis human spaceflight titles and other important works that provide the reader with a resource to continue further research.

Chinese Space Policy Roger Handberg, Zhen Li, 2006-11-29 This volume explains the beginnings and expansion of China's space program, analyzing how China is now able to hold such ambitions and how the interaction between technology, politics and economics has influenced the Chinese space program. It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort, later focusing upon its development over the past decade and into the future. As China is now able to reach into outer space with its machines and, since 2003, with its humans, the authors examine how this move from a non-participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty-first century. They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space 'powers', such as the United States and the former Soviet Union: what is the value of the space program, given its high costs and likelihood of dramatic failure? *Chinese Space Policy* will be of great interest to students of space studies, Chinese politics, security studies, and international relations in general.

Praxis Manned Spaceflight Log 1961-2006 Tim Furniss, Shayler David, Michael D. Shayler, 2007-02-22 This flagship work charts a complete chronological log of orbital manned spaceflight. Included are the X-15 astroflights of the 1960s, and the two 1961 Mercury and Redstone missions which were non-orbital. There is an image depicting each manned spaceflight, and data boxes containing brief biographies of all the space travelers. The main text is a narrative of each mission, its highlights and accomplishments, including the strange facts and humorous stories connected to every mission. The resulting book is a handy reference to all manned spaceflights, the names of astronauts and cosmonauts who flew on each mission, their roles and accomplishments.

Scientific Satellite and Moon-Based Earth Observation for Global Change Huadong Guo, Wenxue Fu, Guang Liu, 2019-06-27 Global change involves complex and far-reaching variations in the Earth's systems, and satellite observations have been widely used in global change studies. Over the past five decades, Earth observation has developed into a comprehensive system that can conduct dynamic monitoring of the land, the oceans and the atmosphere at the local, regional and even global scale. At the same time, although a large number of Earth observation satellites have been launched, very few of them are used in global change studies. The lack of scientific satellite programs greatly hinders research on global change. This book proposes using a series of global change scientific satellites to establish a scientific observation grid for global environmental change monitoring from space, and offers the first comprehensive review of lunar-based Earth observation. These scientific satellites could provide not only basic datasets but also scientific support in facilitating advances in international global change research.

**China's Space Programme** S. Chandrashekar,2022-05-05 This book comprehensively covers the history and current developments of space programme of China. It presents the complete story of China's space programme from its origins through to present day activities on the International Space Station. This monograph further discusses the role of China's space strategy in its emergence as a major power on the world stage. The book also presents the context of China's space program within the larger narrative of international space development. The book binds together the diverse political, military, economic and technology aspects into a coherent understanding and explains their role in the establishment and growth of Chinese space programme. Given the contents, this book will be a valuable source of information for students, researchers, and historians in the area of space studies.

**The History of Human Space Flight** Ted Spitzmiller,2017-02-21 Military Writers Society of America Awards, Gold Medal for History Highlighting men and women across the globe who have dedicated themselves to pushing the limits of space exploration, this book surveys the programs, technological advancements, medical equipment, and automated systems that have made space travel possible. Beginning with the invention of balloons that lifted early explorers into the stratosphere, Ted Spitzmiller describes how humans first came to employ lifting gasses such as hydrogen and helium. He traces the influence of science fiction writers on the development of rocket science, looks at the role of rocket societies in the early twentieth century, and discusses the use of rockets in World War II warfare. Spitzmiller considers the engineering and space medicine advances that finally enabled humans to fly beyond the earth's atmosphere during the space race between the United States and the Soviet Union. He recreates the excitement felt around the world as Yuri Gagarin and John Glenn completed their first orbital flights. He recounts triumphs and tragedies, such as Neil Armstrong's one small step and the Challenger and Columbia disasters. The story continues with the development of the International Space Station, NASA's interest in asteroids and Mars, and the emergence of China as a major player in the space arena. Spitzmiller shows the impact of space flight on human history and speculates on the future of exploration beyond our current understandings of physics and the known boundaries of time and space.

The Facts on File Space and Astronomy Handbook Joseph A. Angelo,2009 Contains a referential glossary of astronomy-related terms, biographies of important astronomers and astronauts, and a chronology of notable events contributing to the science.

**China Space Exploration and its Ballistic Rocket Force** YU-PING SU,2024-03-19 It's a book about the history of China's Space exploration and its Ballistic Rocket Force and their missile equipment. The book was written in Chinese and then translated into English. If you want to know how China development their Space capability, how does China maintain it's space Station Tien-Gong Station, how does CHina explore Moon and plan to build their Moon station in future years, how China plan to explore and settle to Mars, how China plan to fight astroids that might hurt the Earth? **China's Space Program - From Conception to Manned Spaceflight** Brian Harvey,2004-07-15 This book is designed for publication straight after the launch of China's first manned spacecraft. The precursor mission, Shenzhou, flew unmanned in November 1999, in line with the predictions of *The Chinese Space Programme: From Conception to Future Capabilities* (1998) the first edition of this retitled book. *China's Space Program: From Conception to Manned Spaceflight* builds on the 1998 title to take account of the first manned flight in October 2003. It also brings the reader up to date with other developments in the Chinese space programme over from 1998 to the manned flight and looks forward to China's future plans and ambitions.

When China Goes to the Moon... Marco Aliberti,2015-07-04 This book is about China's ambitions in its most complex and internationally visible space endeavor, namely its human space exploration programme. It provides a comprehensive reflection on China's strategic direction and objectives in

space, including in particular those set forth in its human spaceflight programme and analyses the key domestic and external factors affecting the country's presumed manned lunar ambitions. The objective of the book is to disentangle the opportunities and challenges China's space ambitions are creating for other spacefaring nations and for Europe in particular. It therefore includes an in-depth analysis of possible European postures towards China in space exploration and seeks to stimulate a debate on future space strategies in the broader context of world politics.

In the Footsteps of Columbus John O'Sullivan, 2016-06-03 The European Space Agency has a long history of human spaceflight, flying in space with both NASA and the Soviet/Russian space agencies over the years. This book tells the story of the ESA astronauts who have visited the International Space Station over its first decade and how they have lived on board, helped construct the space laboratory and performed valuable scientific experiments. ESA has contributed the Columbus science laboratory as well as the Copula, the Leonardo PMM and the ATV supply ship to the station's infrastructure but it is the human endeavor that captures the imagination. From brief visits to six month expeditions, from spacewalking to commanding the Earth's only outpost in space, ESA astronauts have played a vital role in the international project. Extensive use of color photographs from NASA and ESA depicting the experiments carried out, the phases of the ISS construction and the personal stories of the astronauts in space highlights the crucial European work on human spaceflight.

**China: A Guide to Economic and Political Developments** Ian Jeffries, 2007-01-24 There is currently widespread interest in the Chinese economy, due to its huge and rapid growth, and the consequent impact on world business and the world economy. At the same time, there are concerns about China's political system, China's human rights record and the degree to which reform - the development of 'socialism with Chinese characteristics' - represent real liberalization. Providing an overview of earlier events in order to set the context in which economic and political development have taken place, the book traces economic and political growth in China from the early 1990s to the present. Covering Hong Kong, Macao, Tibet and Taiwan, the book discusses China's relations, including international trade with its neighbours and with the international community more widely. Other key topics covered include the growth of the market, the reform of state owned enterprises, human rights and SARS.
