Shredding Paper Michael G. Hillard,2021-01-15 From the early twentieth century until the 1960s, Maine led the nation in paper production. The state could have earned a reputation as the Detroit of paper production, however, the industry eventually slid toward failure. What happened? Shredding Paper unwraps the changing US political economy since 1960, uncovers how the paper industry defined and interacted with labor relations, and peels away the layers of history that encompassed the rise and fall of Maine's mighty paper industry. Michael G. Hillard deconstructs the paper industry's unusual technological and economic histories. For a century, the story of the nation's most widely read glossy magazines and card stock was one of capitalism, work, accommodation, and struggle. Local paper companies in Maine dominated the political landscape, controlling economic, workplace, land use, and water use policies. Hillard examines the many contributing factors surrounding how Maine became a paper powerhouse and then shows how it lost that position to changing times and foreign interests. Through a retelling of labor relations and worker experiences from the late nineteenth century up until the late 1990s, Hillard highlights how national conglomerates began absorbing family-owned companies over time, which were subject to Wall Street demands for greater short-term profits after 1980. This new political economy impacted the economy of the entire state and destroyed Maine's once-vaunted paper industry. Shredding Paper truthfully and transparently tells the great and grim story of blue-collar workers and their families and analyzes how paper workers formulated a folk version of capitalism's history in their industry. Ultimately, Hillard offers a telling example of the demise of big industry in the United States.

The Metal Shredders Nancy Zafris,2013-11-12 John Bonner is sure that anytime now he will recover from the sting of his recent separation from his wife. And he’s begun to wonder if he truly wants to spend the rest of his days running the family scrap-metal business, an operation where his employees are likely to have made the very license plates they now shred. His sister, Octavia, has just returned to Ohio from Boston to nurture the pain of her own broken relationship, and she is more certain: Following in the footsteps of their imperious father is a recipe for emotional disaster. But then two of John’s more eccentric workmen discover thousands of dollars stashed in the trunk of a car, the remains of a drug deal gone bad. The question of what to do with this unexpected cash draws John and his sister into the lives of their newfound collaborators, and sends them all on a surprising journey of high jinx and the heart. In *The Metal Shredders*, Nancy Zafris offers up a refreshingly wise, offbeat, and thoroughly convincing look at blue-collar America. Hers is a world rich in humor, steeped in closely held traditions, and filled with gently endearing, slightly crazed characters trying to discover just who they are. In the process they discover much about love, loyalty, family obligation, class—and yes, scrap.

Can we go circular? Tharaka Gunaratne,2020-10-02 In concomitance with the growing developments around the circular economy concept in the region, the resource recovery and recycling of industrial production residues is increasingly being envisaged in the European Union and its member states. The role of the recycling industry has become ever important in this context. The shredding industry is based on shredding discarded products such as end-of-life vehicles, and municipal white goods, and subsequent retrieval of (primarily) metals. Shredder fines (or fines) is a heterogeneous fine-granular production residue of this industry, which is currently disposed of. Shredder fines presents, and will continue to do so in the foreseeable future, several challenges that

need to be addressed. It creates a disposal problem given the shrinking landfill availability and incurs handling costs to the shredding industry. Furthermore, it reduces our resources efficiency in general. This thesis aims to contribute knowledge on the challenges of facilitating the valorisation of shredder fines in the context of Sweden. In doing so, the current situation concerning fines and its management was investigated by addressing the research questions; 1) What is the resource potential of fines generated at the studied shredding plant, and 2) Why is the current disposal-oriented management of shredder fines sustained in Sweden. There, a systems perspective was employed, where the research questions were addressed on the material, actor, and institution levels, based on three scientific articles, which are appended. The studied material carries a certain amount of potentially recoverable resources, nevertheless shows a significant need for upgrading pertaining to the user requirements and regulatory standards of different recovery applications. The full recovery of fines requires integrated processes that could simultaneously harness these resource opportunities and resolve the material constraints. When it comes to the current practice of managing fines in Sweden, the utilisation in landfill covering offers the shredding companies a secure outlet for the material, given it is a well-established practice that has evolved over decades of operations and there is still a significant demand for landfill cover materials. Additionally, it provides shredding companies with a legislatively-compliant low-cost disposal option for managing fines. On the other hand, the complex materiality, lack of marketability of secondary raw materials (SRMs), and unfavourable governmental regulation of waste recovery create strategic disincentives for shredding companies in opting for fines valorisation. Fines valorisation calls for change in the well-established current practice of utilising the material in landfill covering. Thus, drastic policy measures such as phasing out landfilling and mandating resource recovery and recycling of fines are required to remove the incentives for fines disposal and compel the shredding industry to seek valorisation alternatives for its management. In order to ensure long-term sustenance, applications based on fines valorisation need favourable and more predictable circumstances and settings on different societal levels. There, secure outlets for potential fines-derived SRMs is one of the essential elements. Governmental interventions to create demand and alleviate valorisation investments via market and financial instruments play a significant role in that regard. The other primary requirement to facilitate fines valorisation in the long term is to set clear market and regulatory playing rules. Established supply and demand structures would enable clear pricing mechanisms for fines-derived SRMs and accurate economic assessments of fines valorisation, thus reducing the investment risk for shredding companies. On the other hand, clear regulatory standards and favourable regulatory practices would reduce the uncertainty of the realisation of valorisation applications and gain trust among actors.
