

Sikorsky H 34

William Schweizer,Paul H. Schweizer

Sikorsky H-34 Lennart Lundh, 1998 Originally designed in 1952 as an anti-submarine warfare platform for the U.S. Navy, almost two-thousand Sikorsky H-34s have served on every continent with the armed forces of twenty-five countries â from combat in Algeria, the Dominican Republic, Nicaragua, and throughout southeast Asia, to saving flood victims, recovering astronauts, fighting fires, and carrying presidents, military H-34s have met every challenge handed them. With continuing post-military service, the number of countries which the H-34 has called home has swelled to nearly fifty. Revitalized with turbine engines, it has yet to fade from sight. Whether lifting construction material or supporting police departments, the DC-3 of helicopters will still be flying on its fiftieth anniversary. The most detailed account of the H-34 to appear, Lennart Lundh's Sikorsky H-34 reflects over a decade of research. It takes the reader through the H-34 from nose to tail, and across its service from Argentina to Vietnam. Few of the photographs have been published before, and many are drawn from private collections. A special feature is the chapter of impressions and anecdotes from fourteen H-34 crew members.

Sikorsky H-37a/CH-37C Deuce H-37a/CH-37 Gunther

Winkle, 2018-08-22 The USMC Deuce was originally designed as a heavy-lift assault helicopter capable of delivering 36 combat troops or equipment (up to two Jeeps or field artillery) from ship to shore. It was quickly adapted by the Army which purchased almost twice as many as the Marines. During its early testing it set both speed and weight lifting records for helicopters. Once in service, it was also used to recover small aircraft and other helicopters by both the Army and Marines in Vietnam. Many of its features, including its 72 foot main rotor blades, were used as the successful basis of its replacement, the CH-53, which is still in use today.

Pop a Smoke Rick Gehweiler, 2022-05-13 By 1969, the Sikorski H-34 was an older helicopter with severe limitations for combat duty in Vietnam. For pilots like U.S. Marine Lieutenant Rick Gehweiler, the good news was it could still take significant damage and keep flying. His vivid memoir narrates his harrowing, at times deadly flight missions under fire, as experienced in the cockpit,

along with anecdotes of tragedy and humor from his 13-month tour through Da Nang and Phu Bai.

Marines and Helicopters, 1962-1973 William R.

Fails,1995-07 Traces the development of helicopters in the Marine Corps from 1962 to 1973. Portrays accurately the difficulties faced and the obstacles conquered by the men who developed helicopters in the Marine Corps. Over 100 figures, maps, photos, and tables.

Westland Wessex Owners' Workshop Manual Lee

Howard,2018-06-05 With a full and active service life of more than 40 years with the Royal Navy and the RAF, the Westland Wessex was one of the most versatile helicopters of the Cold War era. As a British-built turbine-powered development of the American Sikorsky H-34, the Westland Wessex was developed and produced under license by Westland Aircraft (later Westland Helicopters). One of the main differences from Sikorsky's H-34 was the replacement of the piston-engine power plant with a turboshaft engine. The Wessex was the first helicopter to be produced in large numbers that made use of a gas turbine engine. Early models were powered by a single Napier Gazelle engine, while later builds used a pair of Rolls-Royce Gnome engines.

Helicopters Stanley S. McGowen, 2005-05-24 First envisioned by Leonardo da Vinci and first deployed in World War II, the helicopter is now a universal icon of modern warfare, a key component of combat planning around the world, and one of the military's most versatile and effective tools. *Helicopters: An Illustrated History of Their Impact* covers the development of helicopters from a concept in Leonardo da Vinci's mind to the first successful machines in the early 1900s to the latest tilt-rotor designs. Time and again, in a story of constant innovation, designers answered the concerns of military planners with more maneuverable, more capable rotorcraft. With expert analysis and specific details of every significant model ever used, *Helicopters* shows how these once denigrated machines became essential to a variety of missions (reconnaissance, transport, attack, support, evacuation, urban combat, quick strikes behind enemy lines, and more). In addition, the book looks at the impact of rotorcraft beyond the military, including their ever-widening role in emergency medical care, police work, traffic control, agriculture, news reporting, and more.

Flying with the Schweizers William Schweizer, Paul H. Schweizer, 2019-06-01 The story of Schweizer Aircraft is the story

of the American dream. Three brothers became enamored with flight during the golden age of aviation. Aviation becomes their passion. In 1930, they design, build, and then teach themselves to fly in their first glider. They pursue their dream and create a company that eventually produces over six thousand aircraft. The company's products make aviation history. Bill Schweizer tells the story of those early years – up to the transition of the company in 1981 to the second generation of Schweizers. Paul H. Schweizer picks up the story from there. The Schweizers' entrepreneurial approach to business and refusal to let go of their dream resulted in the company becoming an industry leader in sailplanes, agricultural spray aircraft, light helicopters, covert surveillance aircraft, and unmanned vehicles. The diversity of its aviation products made it unique. At the time the business was sold to Sikorsky Aircraft in 2004, Schweizer Aircraft was the oldest privately-owned aircraft manufacturer in the world. It is a remarkable story that will inspire others with a passion and a dream.

The Sikorsky Legacy Sergei I. Sikorsky,The Igor I. Sikorsky

Historical Archives,2007 This book traces the history of Sikorsky aviation and its founder, Igor I. Sikorsky, one of the most talented and versatile aeronautical pioneers in history. Sikorsky's aviation career spanned over 60 years and was highlighted by three major achievements: the creation of the world's first four-engine airliner; the record-breaking Clipper Ships, with which Pan American Airways explored transpacific and transatlantic airline service; and the development of the helicopter. Sikorsky then led his engineers out of the piston-engine era and into the jet age with the design and development of some of the most widely used turbine-powered helicopters in aviation history. More than 200 photographs, many from the Sikorsky family archives, document the genius of Sikorsky's intuitive engineering and his lifelong interest in the challenge of the helicopter, which many historians consider to be his crowning achievement.

Dust Off Peter Dorland,James S. Nanney,2001-07

California Warplanes Harold Skaarup,2012-04-16 This aviation handbook is designed to be used as a quick reference to the

classic military heritage aircraft that have been restored and preserved in the state of California. The aircraft include those flown by members of the US Air Force, the US Navy, the US Army, the US Marine Corps, the US Coast Guard, the Air and Army National Guard units, and by various NATO and allied nations as well as a number of aircraft previously operated by opposition forces in peace and war. The interested reader will find useful information and a few technical details on most of the military aircraft that have been in service with active flying squadrons both at home and overseas. 150 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to American military aircraft. For those who would like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers, websites and email addresses have been included, along with a list of aircraft held in each museums current inventory or that on display as gate guardians throughout the state of California. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of Californias heritage warplanes have completely disappeared, a few have been carefully collected, restored and preserved, and a good number have been restored to

flying condition. This guide-book should help you to find and view Californias Warplane survivors.

American Military Helicopters and Vertical/Short Landing and Takeoff Aircraft Since 1941 E.R. Johnson,Ted Williams,2021-11-01

Over the past eight decades, developments in vertical lift aircraft--both helicopters and vertical/short takeoff and landing (V/STOL) planes--have given the American military unparalleled capabilities on the modern battlefield. The U.S. has led the world in vertical lift technologies with the help of some of the brightest minds in this field--Igor I. Sikorsky, Arthur M. Young, Frank N. Piasecki, Charles H. Kaman and Stanley Hiller, Jr., to name a few--and by having the industrial prowess to make their concepts reality. This book provides a concise historical survey, including technical specifications, drawings, and photographs of every type of helicopter and V/STOL aircraft developed for the U.S. military, from the earliest examples tested in 1941 and 1942, up to the newest prototypes.
