Adam Higginbotham

Silbervogel Jesse Russell, Ronald Cohn, 2012-02 High Quality Content by WIKIPEDIA articles! Silbervogel, German for silver bird, was a design for a rocket-powered sub-orbital bomber aircraft produced by Eugen S nger and Irene Bredt in the late 1930s for The Third Reich/Nazi Germany. It is also known as the RaBo (Raketenbomber or rocket bomber). It was one of a number of designs considered for the Amerika Bomber mission. When Walter Dornberger attempted to create interest in military spaceplanes in the United States after World War II, he chose the more diplomatic term antipodal bomber.

Bear's Tooth - Volume 6 - Silbervogel Yann, 2023-06-18 T00:00:00+02:00 Everything is in place. The radio guidance relays are active, the Silbervogel, the intercontinental bomber, is operational, and Anna is ready to fly it to America – a suicide mission. As for Werner, he seems incapable of fulfilling his mission and killing the beautiful test pilot, in whom he still sees his childhood friend. The arrival of Soviet forces, along with the courage of a handful of prisoners and partisans, will give them both one last chance to do the right thing ... Can they seize it?

My Tank Is Fight! Zack Parsons, 2006 A detailed and witty examination of 20 real inventions from WWII that never saw the light of day. Each entry includes full technical details, a complete development history, in-depth analysis, one or more illustrations and an acerbic fictionalised account of the invention's success or failure on the battlefield. These are the strangest inventions of WWII - from a 1000 ton tank to an aircraft carrier made out of ice - and for many of them, the original illustrations within are the only surviving images of the inspired lunacy they represent.

Energiya-Buran Bart Hendrickx, Bert Vis, 2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

Silbervogel Yann, 2024-04 In the last days of World War Two, as the Nazis attempt to launch a last, desperate, and devastating strike, two childhood friends must pick a side ... Final volume of a great epic about war and friendship.

Dark Star Matthew H. Hersch, 2023-12-26 A captivating history of NASA's Space Transportation System—the space shuttle—chronicling the inevitable failures of a doomed design. In *Dark Star*, Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years, NASA's space shuttle. He begins with the origins of the space shuttle: a century-long effort to develop a low-cost, reusable, rocket-powered airplane to militarize and commercialize space travel, which Hersch explains was built the wrong way, at the wrong time, and for all the wrong reasons. Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011, Hersch illustrates how the space shuttle was doomed from the start. While most historians have accepted the view that the space shuttle's fatal accidents—including the 1986 Challenger explosion—resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft, *Dark Star* reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator. The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws. Hersch's work seeks to answer the perilous questions of technological choice that confront every generation, and it is a critical read for anyone interested in how we can create a better world through the things we build.

Rocketing Into the Future Michel van Pelt, 2012-05-30 This book describes the technology, history, and future of rocket planes. Michel van Pelt journeys into this exciting world, examining the exotic concepts and actual flying vehicles that have been devised over the last hundred years. He recounts the history of rocket airplanes, from the early pioneers who attached simple rockets onto their wooden glider airplanes to the modern world of high-tech research vehicles. The author visits museums where rare examples of early rocket planes are kept and modern laboratories where future spaceplanes are being developed. He explains the technology in an easily understandable way, describing the various types of rocket airplanes and looking at the possibilities for the future. Michel van Pelt considers future spaceplanes, presenting various modern concepts and developments. He describes the development from cutting edge research via demonstrator vehicles to operational use. He also evaluates the replacement of the Space Shuttle with a seemingly old-fashioned capsule system, the parallel developments in suborbital spaceplanes such as SpaceShipOne and SpaceShipTwo, piloted versus automatic flight, and related developments in airliners and military aircraft.

Dream Missions Michel van Pelt, 2017-05-24 This book takes the reader on a journey through the history of extremely ambitious, large and complex space missions that never happened. What were the dreams and expectations of the visionaries behind these plans, and why were they not successful in bringing their projects to reality thus far? As spaceflight development progressed, new technologies and ideas led to pushing the boundaries of engineering and technology though still grounded in real scientific possibilities. Examples are space colonies, nuclear-propelled interplanetary spacecraft, space telescopes consisting of multiple satellites and canon launch systems. Each project described in this book says something about the dreams and expectations of their time, and their demise was often linked to an important change in the cultural, political and social state of the world. For each mission or spacecraft concept, the following will be covered: • Description of the design. • Overview of the history of the concept and the people involved. • Why it was never developed and flown • What if the mission was actually carried out – consequences, further developments, etc.

Into the Black Rowland White, 2016-04-19 Using interviews, NASA oral histories, and recently declassified material, [this book] reveals the dramatic untold story of the first space shuttle and the dedicated people who brought the United States into the next stage of space exploration--Dust jacket flap.

Safety in Aviation and Astronautics Simon Ashley Bennett, 2021-11-25 Aviation safety and astronautics safety are taught as technical subjects informed, for the most part, by quantitative methods. Here, as in other fields, safety is often framed as an engineering problem requiring mathematics-informed solutions. This book argues that the socio-technical approach, encompassing theories grounded in sociology and psychology – such as active learning, high-reliability organising, mindfulness, leadership, followership and empowerment – has much to contribute to the safety performance of these vital industries. It sets out to inspire professionals to embed the whole-system approach into design and operation regimen and describes the reputational and financial benefits to manufacturers and operators that accrue from adopting a whole-system approach to design and operation. The book defines the socio-technical approach to risk assessment and management in aviation and astronautics (astronautics is taken to mean the design and operation of vehicles for use beyond the earth's atmosphere), then demonstrates the strengths and weaknesses of this approach through case studies of, for example, the Boeing 737MAX-8 accidents and the loss of the SpaceShipTwo orbiter. Grounding the discourse in familiar case studies engages busy aviation and astronautics professionals. The book's arguments are explained in such a way that they are readily comprehensible to non-experts. Key concepts are defined within a glossary. Photographs, charts and diagrams illustrate key points. Written for a practitioner audience, specifically aviation and astronautics professionals, this book provides a valuable and accessible social sciences perspective on safety that will be directly relevant to their roles.

Silbervogel Yann, Usagi, 2018-10-03 T00:00:00+02:00 De vernietiging van New York lijkt onafwendbaar. Ondanks haar recente ontdekkingen over hoe de nazi's de Joden behandelen, is Hanna meer dan ooit overtuigd om de stuurknuppel in handen te nemen van de Silbervogel, de fonkelnieuwe bommenwerper. Dit technologische wonder moet de atoombom lossen boven de Big Apple: de ultieme wraakactie die niemand nog voor mogelijk houdt. De spanning stijgt ten top in dit laatste deel van Berentand: zullen Werner en Hanna elkaar terugvinden nadat hun tegengestelde waarden hen uiteendreven? Zal de oorlog alsnog overwinnen door hun vriendschap en het lot van duizenden andere mensen op te blazen? Kan New York gered worden van de bommen? Een explosief orgelpunt voor deze historische saga!

The Race for Hitler's X-Planes John Christopher,2012-10-01 During World War 2, Hitler’s engineers had pioneered an incredible array of futuristic secret weapons, from the Me 262, the first operational jet fighter, to the deadly V2 inter continental ballistic missile. With the Third Reich shattered and lying in ruins, in the summer of 1945, the Allies launched a frantic race to grab what they saw as the justifiable spoils of war. The Americans and Russians in particular were anxious to secure not only the aircraft and the research and production facilities, but also the key German scientists and engineers. This Nazi technology would define the balance of power in the phoney peace of the Cold War era, launching an arms race that shaped our modern world for decades to come. But what of Britain’s role in this supermarket sweep? The Race for Hitler’s X-Planes tells the untold story of the British mission to Germany.

Challenger Adam Higginbotham,2024-05-14 On January 28, 1986, just seventy-three seconds into flight, the space shuttle Challenger broke apart over the Atlantic Ocean, killing all seven people on board. Millions of Americans witnessed the tragic deaths of a crew including New Hampshire schoolteacher Christa McAuliffe. Like the assassination of JFK, the Challenger disaster is a defining moment in 20th century history--one that forever changed the way America thought of itself and its optimistic view of the future. Yet the full story of what happened, and why, has never been told. Until now.--

Nazi UFOs S.D. Tucker,2022-10-24 Nazi UFOs tells the strange tale of how, following the first alleged flying saucer sightings made in the USA in 1947, a series of fantasists and neo-fascists came forward to create a media myth that the Nazis may have invented these incredible craft as a means for winning the Second World War, a plan which was tantalisingly close to completion before the Allies conquered Berlin in 1945. Today, the fantasy of Nazi UFOs has grown into an entire mythology in books, on TV and online. Did Germany back-engineer anti-gravity craft, and even a full-blown time-machine, by stripping technology from a crashed alien saucer? Did the SS secretly invent ‘Green’ technology for use in their star ship engines, and was this planet-saving discovery later suppressed at the behest of a sinister Big Oil conspiracy? Did Himmler try to develop ‘lightning weapons’ for use in aerial combat? By contrasting the fake military-industrial pseudo-histories of Nazi UFO theorists with details of real-life Nazi aerospace achievements, the author demonstrates both how this modern-day mythology came about and how it cannot possibly be more than fractionally true. For the first time, this fake ‘alternative military history’ is laid out in full. This book features an appealing cast of con-men and spies, complete madmen, real-life Nazis and completely made-up ones, operating right across the globe from South America to wartime Europe and Japan. A good example may be the ‘mad professor’, Viktor Schauberger, who actually genuinely did manage to gain a personal audience with Adolf Hitler in order to try and convince him that he had discovered and then exploited some amazing new source of natural ‘free energy’ which could make objects (such as saucers, in the opinion of some) float. Hitler dismissed his plan, but it does nonetheless show how close some bizarre schemes came to being implemented in Nazi Germany.

Cosmonauts do it in Heaven Keith Gottschalk,2020-11-30 Keith Gottschalk is one of very few English language poets after Walt Whitman to compose poems celebrating engineers, inventions, and scientists. With wit and paradox, these poems explore our solar system, and celebrate astronomers and spaceflight. This collection opens with an imaginary trip through time from Copernicus to Einstein those who literally made space as we conceptualise it today. It closes with an imaginary trip through our solar system. In between, we find moving elegies to astronauts who lost their lives, and celebrations of a glittering international constellation of engineers, inventors, mathematicians, and researchers. Irony, allusions, double-entendres, and wonderment are always looking over the readers shoulder. Many of these poems, composed over thirty-four years, have already been individually published to acclaim in literary and other magazines.

V-S Day Allen Steele,2014-02-04 With a gift for visionary fiction that “would make Robert A. Heinlein proud” (Entertainment Weekly) three-time Hugo Award-winning author Allen Steele now imagines an alternate history rooted in an actual historical possibility: what if the race to space had occurred in the early days of WWII? It's 1941, and Wernher von Braun is ordered by his Fuehrer to abandon the V2 rocket and turn German resources in a daring new direction: construction of a manned orbital spacecraft capable of attacking the U.S. Work on the rocket—called Silbervogel—begins at Peenemunde. Though it is top secret, British intelligence discovers the plan, and brings word to Franklin Roosevelt. The American President determines that there is only one logical response: the U.S. must build a spacecraft capable of intercepting Silbervogel and destroying it. Robert Goddard, inventor of the liquid-fuel rocket, agrees to head the classified project. So begins a race against time—between two secret military programs and two brilliant scientists whose high-stakes competition will spiral into a deadly game of political intrigue and unforeseen catastrophes played to the death in the brutal skies above America.

Nazi Moonbase Graeme Davis,2016-04-21 In the dying days of World War II, Nazi Germany spent increasingly large amounts of its dwindling manufacturing capability on the construction of a small fleet of flying saucers capable of travel beyond the atmosphere. While these saucers were too few in number to affect the eventual outcome of the war, they did allow for a small, but fanatical Nazi group to escape Germany, first to Antarctica, and then on to the moon! For the first time, the history of the Nazi space program has been revealed - with a focus on the design, construction, and layout of the moonbase. Using detailed maps, the entire moonbase is reconstructed, noting the locations of various important features, such as weapon emplacements, the Vril generator, the air recyclers and water extractors. The book also covers the various attempt by the allies to overcome this last Nazi stronghold through both subterfuge and outright battle.
