Steven J. Zaloga

Early US Armor Steven J. Zaloga,2017-04-07 Between the two World Wars, the US contributed significantly to the development of the tank, a weapon invented by the British and the French seeking a way to break through the lines of German trenches. From the employment of the French Renault FT and British Mark V during their involvement in World War I, the US branched out with their own indigenous designs including the M1 Cavalry Car and the M2 Light and Medium tanks, the precursors to the Stuart and Grant tanks of World War II. Tank designers in this period faced unique challenges and so the story of early American armour is littered with failures amongst the successes. Featuring previously unpublished photos and fully illustrated throughout, *Early American Armor* (1): Tanks 1916-40 is essential reading for anyone interested in American armour, or in the development of tank design.

Light Tanks Mikhail Baryatinskiy,2006 It is one of the ironies of Soviet tank development that a country opposed to free enterprise and capitalism was largely reliant on influences from Britain and the USA for many of its early designs. However, unhindered by many of the tactical constraints that affected tank development in the West, the Red Army was able to acquire and develop technology that was under-rated in both Britain and the USA. From Britain, the famous manufacturer Vickers produced a Six-Ton light tank; effectively rejected by the War Office, one example was acquired by the Russians and this formed the basis of the Russian T-26 of 1931. Further British designs also influenced the later light tanks, equipment which was pivotal to the Red Army during its campaigns in Manchuria, Finland and against the initial German assault in 1941. In the USA, Walter Christie was also largely ignored as a designer but, as with Vickers, his designs came to be highly important. His influence was seen in the 'BT' - short for 'Bystrochodri' or 'Fast Tank' - series of light-medium tanks that was first introduced in 1932. The BT series saw service in Spain, Manchuria, Finland and in the defense of Russia itself in 1941. The critical aspect of the Christie design was that the vehicles were capable of operating both with nor without tracks; in the latter case eight road wheels carried the weight of the vehicle, with steering being achieved via a steering wheel acting in conjunction with the clutch/brake system. In the second of the new 'Soviet Tanks' series, Mikhail Baryatinsky provides the reader with a comprehensive account of the development and operational record of Soviet light tanks. Utilizing photographs, line drawings and speciallyprepared artworks, he provides a detailed portrait of these highly successful tanks. Aimed at the modeler, military historian and war gamer, the new 'Soviet Tanks' series is designed to provide, probably for the first time in the English language, authoritative information on the classic Soviet tank designs of the 20th century. The series will be required reading for all those interested in the development of armored warfare over the past 100 years.

T-26 Light Tank Steven J. Zaloga,2015-01-20 The T-26 was the first major Soviet armour program of the 1930s, beginning as a license-built version of the British Vickers 6-ton export tank. Although the T-26 retained the basic Vickers hull and suspension, the Red Army began to make extensive changes to the turret and armament, starting with the addition of a 45mm tank gun in 1933. The T-26 was built in larger numbers than any other tank prior to World War II. Indeed, more T-26 tanks were manufactured than the combined tank production of Germany, France, Britain, and the United States in 1931-40. This book surveys the development of the T-26 as well as its combat record in the Spanish Civil War, the war in China, the border wars with Poland and Finland in 1939-40, and the disastrous battles of 1941 during Operation Barbarossa.

Tank Hunter Craig Moore,2017-11-01 *Tank Hunter: World War One* covers all the British and French built tanks used by U.S. tank crews in the Great War of 1914-1918. There are sections of the book devoted to early American tank development including the Skeleton tank, U.S. Steam Tank (Track Laying), Holt Gas-Electric Tank, Ford 3-ton tank and the M1917 6-ton tank. There is also information on the four tank battles fought by the 301st Battalion, US Tank Corps in 1918.

Men, Ideas, and Tanks J. P. Harris,1995 *Men, ideas and tanks* reviews the development of British military ideas on armoured forces from 1903 to 1939. Great Britain was the nation which first developed the tank, first used it in action and first gained dramatic results by employment. The British continued to be world leaders in the field of mechanised warfare until the early 1930s. Now available in paperback for the first time, J. P. Harris original work offers new interpretations of the early history of British armoured forces and explains why Great Britain had lost the lead by the outbreak of the Second World War. This work will be of interest to all those concerned with British military history in the first half of the twentieth century, with the history of mechanised warfare and with the history of military thought.

Tanks Richard Ogorkiewicz,2015-02-20 From an internationally acclaimed expert in the field comes a detailed, analytical and comprehensive account of the worldwide evolution of tanks, from their inception a century ago to the present day. With new ideas stemming from the latest academic research, this study presents a reappraisal of the development of tanks and their evolution during World War I and how the surge in technological development during World War II and the subsequent Cold War drove developments in armour in Europe and America, transforming tanks into fast, resilient and powerful fighting machines. From the primitive, bizarre-looking Mark V to the Matilda and from the menacing King Tiger to the superlative M1 Abrams, Professor Ogorkiewicz shows how tanks gradually acquired the enhanced capabilities that enabled them to become what they are today - the core of combined-arms, mechanized warfare.

Armored Thunderbolt Steve Zaloga,2008 • Hundreds of photos, including many never published before with riveting accounts of armored warfare in World War II • Compares the Sherman to other tanks, including the Panther and Tiger • Author is a world-renowned expert on the Sherman tank and American armor Some tank crews referred to the American M4 Sherman tank as a death trap. Others, like Gen. George Patton, believed that the Sherman helped win World War II. So which was it: death trap or war winner? Armor expert Steven Zaloga answers that question by recounting the Sherman's combat history. Focusing on Northwest Europe (but also including a chapter on the Pacific), Zaloga follows the Sherman into action on D-Day, among the Normandy hedgerows, during Patton's race across France, in the great tank battle at Arracourt in September 1944, at the Battle of the Bulge, across the Rhine, and in the Ruhr pocket in 1945.

British Battle Tanks Simon Dunstan,2020-01-23 This book, the last in a four-part series on British Battle Tanks covering the whole history of British armoured warfare, concentrates on those vehicles that have served following the end of World War II up to the present day. Starting with the Centurion, the title explores those types that equipped the armoured divisions lined up on the German plains to resist any potential Soviet offensive, as well as in Korea and Suez, including the Chieftain and Conqueror, and modern tanks such as the Challenger 2 which are still in service today. Covering the many variants of these and other tanks in British service as well as their deployments around the world, including in Afghanistan and Iraq, this illustrated volume is a comprehensive guide to the development of British tanks since the Second World War.

Polish Vickers Adam Jońca,2013 Complementing the well-established and successful Polish Wings series on aircraft of the Polish Air Force, this book is the second in a series on Polish army vehicles. It tells the story of four major tanks of British origin used by the Polish army in the 1930s, some still in use at the time of the German invasion. Training and operations with these tanks are described and illustrated, with many photos and full color artwork. Color schemes and markings are described and illustrated.

US Marine Corps Tanks of World War II Steven J. Zaloga,2012-01-20 During World War II, the US Marine Corps formed six tank battalions that battled through the harsh conditions of the Pacific Theatre. Using the same basic tanks as the US Army, notably the M3 and M5A1 light tanks and the M4 Sherman medium tank, the marines made both technical and tactical innovations to make them more effective in the fight against the Japanese. Deep wading equipment, flamethrower tanks, and even wooden armor all became part of the Marine arsenal. This book examines the tactics and technology that made the US Marine Corps tank service unique in the annals of warfare.

BT Fast Tank Steven J. Zaloga,2016-08-25 When the Red Army needed to mechanize its cavalry branch in the 1930s, the BT fast tank was its solution. Based on the American Christie high-speed tank, the Red Army began a program to adapt the design to its own needs. Early versions were mechanically unreliable and poorly armed but by the mid-1930s, the BT-5 emerged, armed with an excellent dual-purpose 45mm gun. It saw its combat debut in the Spanish Civil War in 1937 and was later used in the border battles with the Japanese Kwangtung Army in the late 1930s. The final production series, the BT-7, was the most refined version of the family. One of the most common types in Red Army service in the first years of the Second World War, BT tanks saw extensive combat in Poland, Finland, and the opening phases of Operation Barbarossa in 1941 and latterly during the 1945 campaign against the Japanese in Manchuria – this is the story of their design and development history.
