Who Understands Comics? Neil Cohn,2020-11-12 **Nominated for the 2021 Eisner Award for Best Academic/Scholarly Work** Drawings and sequential images are so pervasive in contemporary society that we may take their understanding for granted. But how transparent are they really, and how universally are they understood? Combining recent advances from linguistics, cognitive science, and clinical psychology, this book argues that visual narratives involve greater complexity and require a lot more decoding than widely thought. Although increasingly used beyond the sphere of entertainment as materials in humanitarian, educational, and experimental contexts, Neil Cohn demonstrates that their universal comprehension cannot be assumed. Instead, understanding a visual language requires a fluency that is contingent on exposure and practice with a graphic system. Bringing together a rich but scattered literature on how people comprehend, and learn to comprehend, a sequence of images, this book coalesces research from a diverse range of fields into a broader interdisciplinary view of visual narrative to ask: Who Understands Comics?

Circular Use of Resources József H.c Popp,Fogarassy Csaba,David Christian Finger,2020 Circular solutions are essential to tackle the eminent challenges of depleting resources and emerging environmental problems. The complex nature of material and energy systems and the changing of economic and technological conditions differ among countries and, therefore, lead to the application of vastly different practices in developed and rapidly developing countries of the world. A wide variety of theoretical approaches can be used to facilitate a shift from the linear use of resources to circular systems, e.g., circular product planning, life cycle planning, sharing and platform economy, refurbishing, and remanufacturing, to name but a few. The introduction and examination of circular solutions can be based on theoretical models in order to guarantee ensure successful application. Successful application of innovative technology approaches, business solutions, and organizational development can be facilitated through theoretical models and new scientific results that support innovation processes. This Special Issue reprint focuses on sustainable and innovative methods which help and enable the proper use and recovery of resources. We present a collection of research papers, reviews, research reports, and case studies that introduce or discuss circular solutions for the sustainable use of resources.

In the Pines Erik Kriek,2017-06-21 The murder ballad holds a rock-solid position in US roots music and the Great American Songbook for decades. Telling the stories of sometimes true and often not-so-true-crimes and other horrific events, they are raw stories full of unrequited love, betrayal, life, and death. The song form stems from the Anglo-Saxon ballad tradition, where stories were orally passed on to a mostly illiterate population. Dutch cartoonist Erik Kriek was inspired by five old and new murder ballads — including songs by modern masters such as Nick Cave, Steve Earle, and Gillian Welch — and used them as a launching point for five special and ruthless graphic narratives that dig deep into the darkness of Americana, in which guns and religion maintain an uneasy balance.

The Visual Narrative Reader Neil Cohn,2016-01-28 Sequential images are as natural at conveying narratives as verbal language, and have appeared throughout human history, from cave paintings and tapestries right through to modern comics. Contemporary research on this visual language of sequential images has been scattered across several fields: linguistics, psychology, anthropology, art education, comics studies, and others. Only recently has this disparate research begun to be incorporated into a coherent understanding. In *The Visual Narrative Reader*, Neil Cohn collects chapters that cross these disciplinary divides from many of the foremost international researchers who explore fundamental questions about visual narratives. How does the style of images impact their understanding? How are metaphors and complex meanings conveyed by images? How is meaning understood across sequential images? How do children produce and comprehend sequential images? Are visual narratives beneficial for education and literacy? Do visual narrative systems differ across cultures and historical time periods? This book provides a foundation of research for readers to engage in these fundamental questions and explore the most vital thinking about visual narrative. It collects important papers and introduces review chapters summarizing the literature on specific approaches to understanding visual narratives. The result is a comprehensive “reader” that can be used as a coursebook, a researcher resource and a broad overview of fascinating topics suitable for anyone interested in the growing field of the visual language of comics and visual narratives.

The Descent Thomas Dekker,2017-07-06 'I have success, money, women. I've been lionised by the public and the media. The world is at my feet. I've spread my wings and here I am, soaring above everything and everyone. But in reality, the descent has already begun.' Thomas Dekker was set to become one of pro cycling's superstars. But before long, he found himself sucked in by the lure of hedonistic highs and troubled by the intense pressure to perform. In *The Descent*, Dekker tells his story of hotel room blood bags, shady rendezvous with drug dealers and late-night partying at the Tour de France. This is Dekker's journey from youthful idealism to a sordid path of excess and doping that lays bare cycling's darkest secrets like never before.

Supramolecular Structure and Function Greta Pifat-Mrzljak,2013-03-12 During the past decade we have witnessed not only an increase in knowledge of the traditional biophysical problems, but also an understanding of the molecular basis of various biological phenomena. The principles and methods of biophysics now provide an underpin ning of all of the basic biosciences and are the rational language for discussion between scientists of different disciplines. The International School on Biophysics Supramolecular Structure and Function held in Dubrovnik in September 1984 had as its goal to provide comprehensive discussions on a large number of subjects both for younger scientists at the doctoral or postdoctoral level interested in the molecular nature of fundamental biological entities, and for experienced scientists wishing to gain a broader insight into molecular structures and functions. The topics discussed at the School were inter- and intramolecular interactions in biological systems, and the structure, organization, and function of biological macromolecules and supramolecular assemblies. A number of topics were centered around either a biological problem or a physical technique, sometimes giving an unbalanced view of the field under discussion. Some of the topics required previous knowledge of basic biophysical principles, which were then applied to gain greater insight into the molecular functions of diverse supramolecular systems. Although not all the lectures could be prepared for publication in this volume, I hope that it contains valuable up-to-date information on various aspects of the molecular basis of life.

The Late Eocene Earth Christian Koeberl,Alessandro Montanari,2009 The Late Eocene and the Eocene-Oligocene (E-O) transition mark the most profound oceanographic and climatic changes of the past 50 million years of Earth history, with cooling beginning in the middle Eocene and culminating in the major earliest Oligocene Oi-1 isotopic event. The Late Eocene is characterized by an accelerated global cooling, with a sharp temperature drop near the E-O boundary, and significant stepwise floral and faunal turnovers. These global climate changes are commonly attributed to the expansion of the Antarctic ice cap following its gradual isolation from other continental masses. However, multiple extraterrestrial bolide impacts, possibly related to a comet shower that lasted more than 2 million years, may have played an important role in deteriorating the global climate at that time. This book provides an up-to-date review of what happened on Earth at the end of the Eocene Epoch.
