Technology Education in School and Industry Dietrich Blandow, Michael J. Dyrenfurth, 1994 This book identifies elements in industrial training programs incorporating advanced educational technology that could be appropriately transferred to the secondary school environment. New didactic concepts for developing key qualifications through technology education programs using advanced educational technology in innovative integrative situations are explained from educational, technological, engineering, and management perspectives. The target of the work is to develop integrated learning situations suitable for secondary schools and teacher education, as well as for university-level technology, teacher education, and engineering programs. The book is based on a NATO Advanced Research Workshop held within the NATO Special Programme on Advanced Educational Technology.

Can Cars Come Clean? Strategies for Low-Emission Vehicles OECD, 2004-03-10 This report identifies policy options and makes recommendations on market-oriented actions to promote the purchase of the most environmentally friendly vehicles.

Can Cars Come Clean?, 2004-03-31 Emissions of pollutants from motor vehicles have been the focus of longstanding concerns for both governments and the public at large because of their impact on air quality and human health. More recently, emissions of greenhouse gases have been of growing concern because of their impacts on global warming. Despite the sustained increase in the number of vehicles on roads and overall distance travelled, improvements in conventional vehicle and fuel technologies over the past ten years have led to considerable reductions in emissions of local pollutants. These reductions have contributed to improvements in air quality in urban areas in most OECD countries. At the same time, CO2 emissions are continuing to increase by nearly 2% per year. What is the potential of conventional technologies (petrol and diesel) to further reduce local pollutant levels? Is it possible to reduce vehicle fuel consumption, and thereby help prevent a continuous increase in CO2 emissions? What can be expected from the use of alternative fuels (such as LPG, CNG and biofuels)? Do alternative technologies (such as full electric vehicles or hybrid vehicles) have the potential to reduce both local pollutants and global emissions, and if so, are they able to compete in the marketplace with conventional technologies? In the longer term, what can be expected from the development of fuel cell vehicles? This report provides answers to these important questions, identifies policy options and makes recommendations on actions that would promote the purchase and use of the most environmentally friendly vehicles.

A Successful Transformation? Petr Pavlínek, 2008-04-30 This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

Innovation and Technology — Strategies and Policies Olivério D.D. Soares, A. Martins da Cruz, G. Costa Pereira, Isabel M.R.T. Soares, Albino J.P.S. Reis, 2007-08-27 Innovation and Technology - Strategies and Policies contains a selection of outstanding contributions by world experts on how a culture of innovation is able to produce a response to fast global changes affecting society. The book describes major evolutionary directions and foreseen trends in: environment versus industry; technology breakthroughs; energy planning; education and research; intangible investment requirements; new health technologies; and economics and management of innovative actions at strategic, organisational and technological levels. The actual percolation of the innovative process throughout the multiple facets of society is presented in relation to the main challenges facing us in the 21st Century. The book is addressed to all those concerned with innovation in dynamic terms as a creative response to the ongoing changes in society integrating sciences, technologies, humanities, life-long education and training, and other disciplines.
