Media Audiences and Identity S. Bailey, 2005-09-08 Using a unique combination of cultural studies research, neo-pragmatist philosophy, and psychoanalytic theory, the author sheds light on the formation of a social identity and the important role that mass media play in this process. Case studies covering a range of media and communities provide a model for developing a truly explanatory as well as descriptive account of self-media interaction that bridges the two opposing sides of the media audience debate and provides a significant new dimension to notions of 'passive' and 'active' media audiences.

Magnetohydrodynamic Modeling of the Solar Corona and Heliosphere Xueshang Feng, 2019-08-01 The book covers intimately all the topics necessary for the development of a robust magnetohydrodynamic (MHD) code within the framework of the cell-centered finite volume method (FVM) and its applications in space weather study. First, it presents a brief review of existing MHD models in studying solar corona and the heliosphere. Then it introduces the cell-centered FVM in three-dimensional computational domain. Finally, the book presents some applications of FVM to the MHD codes on spherical coordinates in various research fields of space weather, focusing on the development of the 3D Solar-InterPlanetary space-time Conservation Element and Solution Element (SIP-CESE) MHD model and its applications to space weather studies in various aspects. The book is written for senior undergraduates, graduate students, lecturers, engineers and researchers in solar-terrestrial physics, space weather theory, modeling, and prediction, computational fluid dynamics, and MHD simulations. It helps readers to fully understand and implement a robust and versatile MHD code based on the cell-centered FVM.

Computational Conflict Research Emanuel Deutschmann, Jan Lorenz, Luis G. Nardin, Davide Natalini, Adalbert F. X. Wilhelm, 2019-11-09 This open access book brings together a set of original studies that use cutting-edge computational methods to investigate conflict at various geographic scales and degrees of intensity and violence. Methodologically, this book covers a variety of computational approaches from text mining and machine learning to agent-based modelling and social network analysis. Empirical cases range from migration policy framing in North America and street protests in Iran to violence against civilians in Congo and food riots world-wide. Supplementary materials in the book include a comprehensive list of the datasets on conflict and dissent, as well as resources to online repositories where the annotated code and data of individual chapters can be found and where (agent-based) models can be re-produced and altered. These materials are a valuable resource for those wishing to retrace and learn from the analyses described in this volume and adapt and apply them to their own research interests. By bringing together novel research through an international team of scholars from a range of disciplines, Computational Conflict Research pioneers and maps this emerging field. The

book will appeal to students, scholars, and anyone interested in the prospects of using computational social sciences to advance our understanding of conflict dynamics.

Frontiers of Quantum Chemistry Marek J. Wójcik,Hiroshi Nakatsuji,Bernard Kirtman,Yukihiro Ozaki,2017-11-06 The purpose of this book is to convey to the worldwide scientific community the rapid and enthusiastic progress of state-of-the-art quantum chemistry. Quantum chemistry continues to grow with remarkable success particularly due to rapid progress in supercomputers. The usefulness of quantum chemistry is almost limitless. Its application covers not only physical chemistry but also organic and inorganic chemistry, physics, and life sciences. This book deals with all of these topics. Frontiers of Quantum Chemistry is closely related to the symposium of the same name held at Kwansei Gakuin University at Nishinomiya, Japan, in November 2015. The book's contributors, however, include not only invited speakers at the symposium but also many other distinguished scientists from wide areas of quantum chemistry around the world.

Drawn to Television M. Keith Booker,2006-08-30 Since late evening cartoons first aired in 1960, prime-time animated series have had a profound effect on American television and American culture at large. The characters and motifs from such shows as The Flintstones and The Simpsons are among the best-known images in world popular culture; and tellingly, even series that have not done well in prime time—series like The Jetsons, for instance—have yielded similarly iconic images. The advent of cable and several new channels devoted exclusively to animated programming have brought old series back to life in syndication, while also providing new markets for additional, often more experimental animated series. Even on the conventional networks, programs such as The Flintstones and The Simpsons, not to mention Family Guy and King of the Hill, have consistently shown a smartness and a satirical punch that goes well beyond the norm in network programming. Drawn to Television traces the history of prime-time animation from The Flintstones initial extension of Saturday mornings to Family Guy and South Park's late-night appeal in the 21st century. In the process, it sheds a surprising light on just how much the kid inside us all still has to say. Drawn to Television describes the content and style of all the major prime-time animated series, while also placing these series within their political and cultural contexts. It also tackles a number of important questions about animated programming, such as: how animated series differ from conventional series; why animated programming tends to be so effective as a vehicle for social and political satire; what makes animated characters so readily convertible into icons; and what the likely effects of new technologies (such as digital animation) will be on this genre in the future.

The Comic Galaxy of Mystery Science Theater 3000 Chris Morgan, 2015-01-13 One of the most original shows in the history of television, *Mystery Science Theater 3000* is a beloved cult hit built on the back of another cult phenomenon: the bad movie. The show's premise involved a man and some robots watching cheesy movies and cracking jokes. Over its 197 episodes, MST3K developed a passionate fan base that took it from a local UHF show in Hopkins, Minnesota, to a major motion picture. This is the story of MST3K from the beginning to the end. Twelve of the episodes are covered, giving an in-depth look at the show, its ethos and its comedic style. The films screened in these episodes are discussed critically, as are the episodes themselves.
