To the Last Salute Georg von Trapp, 2009-01-01 The Sound of Music endeared Georg von Trapp (1880-1947) and his singing family to the world, and it also showed how desperately the Nazis wanted Captain von Trapp for their navy. In *To the Last Salute* we learn why. Trapp's own story of his exploits as a submarine commander during the First World War is as exciting as it is instructive, bringing to stirring life a little-known chapter in the naval history of that war. In his many guises, Trapp describes life as captain of Austro-Hungarian U-boats in the Mediterranean and Adriatic seas, emerging by turn as the Imperial Austrian naval officer, the witty observer of international politics, and the indefatigable and ultimately heartbroken patriot opposing the Allied enemy. He relates deadly duels with submarine sweepers, narrow escapes and excruciatingly close calls, and the spectacular sinking of cargo and war ships—all while maintaining a keen sense of the camaraderie of seamen from every corner of the Austro-Hungarian Empire. Trapp's story, in English for the first time, offers a rare combination of human interest, historical insight, and true life-and-death adventure.

Computational Methods for the Determination of Formation Constants David J. Leggett, 2013-11-11 This volume is concerned with methods that are available for the calculation of formation constants, in particular computational procedures. Although graphical methods have considerable value in the exploration of primary (raw) data they have been overtaken by computational methods, which, for the most part, take primary data and return the refined formation constants. Graphical methods are now considered complementary to these general computational procedures. This volume brings together programs that span the lifetime of computer-assisted determination of formation constants. On one hand the reader will find listings of programs that are derived from LETAGROP (b.1961) and the GAUSS-G/SCOGS (b. 1962) families. On the other hand programs are presented that are the newest members of the SCOGS lineage and from the on-going MINQUAD series. One program is presented that describes a computational approach to the classical Hedstrom Osterberg methods; another that takes care of electrode calibration in a simple yet rigorous manner. Potentiometry and spectrophotometry are the most popular experimental techniques for equilibrium studies, and the programs in this volume reflect this. Four programs handle potentiometric data, two will process spectrophotometric data, and one makes use of both types of data

separately or in combination.
