Water Security, Climate Change and Sustainable Development Asit K. Biswas, Cecilia Tortajada, 2015-11-17 This book pursues a comprehensive approach so as to arrive at a better understanding of the implications of climate change on sustainable development, focusing on the perspective of water. Climate change is one of today's most pressing global issues and will become increasingly important in the decades to come, as societies will feel its pervasive impacts in many aspects of their lives. Given that the majority of these climate change impacts will be felt through the medium of water, the book explores the interrelationships and inter-linkages between water, climate change and sustainable development.

Smart Planning: Sustainability and Mobility in the Age of Change Rocco Papa, Romano Fistola, Carmela Gargiulo, 2018-06-12 This book offers an overview of sustainability and urban mobility in the context of urban planning – topics that are of considerable interest in the development of smart cities. Environmental sustainability is universally recognized as a fundamental condition for any urban policy or urban management activity, while mobility is essential for the survival of complex urban systems. The new opportunities offered by innovations in the mobility of people, goods and information, as well as radically changing interactions and activities are transforming cities. Including contributions by urban planning scholars, the book provides an up-to-date picture of the latest studies and innovative policies and practices in Italy, of particular interest due to its spatial, functional and social peculiarities. Sustainability and mobility must form the basis of “smart planning” – a new dimension of urban planning linked to two main innovations: procedural innovation in the management of territorial transformations and the technological innovation of the generation, processing and distribution of data (big data) for the creation of new digital environments such as GIS, BIM, models of augmented and mixed reality, useful for describing changes in human settlement in real time.

Analysis and Synthesis of Compliant Parallel Mechanisms–Screw Theory Approach Chen Qiu, Jian S. Dai, 2020-06-23 This book addresses the design of compliant mechanisms, presenting readers with a good understanding of both the solid mechanics of flexible elements and their configuration design, based on a mechanism-equivalent approach in the framework of screw theory. The book begins with the theoretical background of screw theory, and systematically addresses both the compliance characteristics of flexible elements and their configuration design. The book then covers a broad range of compliant parallel mechanism design topics, from stiffness to constraint decomposition, from conceptual design to dimensional design, and from analysis to synthesis, as well as the large deformation problem; this is followed by both simulations and physical experiments, offering readers a solid foundation and useful tools. Given its scope and the results it presents, the book will certainly benefit and inform future research on the topic. It offers a valuable asset for researchers, developers, engineers and graduate students with an interest in compliant mechanisms, robotics and screw theory.

Dynamic Light Filters Isabel Dias Cabral, António Pedro Souto, Linda Worbin, 2020-01-21 This book offers an

extensive, interdisciplinary overview of dynamic textiles. Specifically, it discusses new findings and design concepts concerning the integration of smart materials into textile substrates and their corresponding dynamic behavior. Introducing the topic of dynamic color in textiles, it presents experimental procedures to achieve color change and dynamic light transmittance in thermochromic textiles, and examines their thermoresponsive behavior and respective electrical activation. Moreover, it also addresses the topic of dynamic form and reports on the authors' original findings using shape-memory alloys and geometric morphologies based on origami techniques. Covering innovative smart textiles and important considerations in terms of design variables when developing textiles with dynamic qualities, and providing extensive, practice-oriented insights into the interaction of textiles with light, it is primarily intended for academics, researchers and practitioners developing smart, dynamic and interactive textiles. The sections describing in detail the experimental work aimed at the integration of smart materials in textile substrates also appeal to professionals in the textile industry.

The Black Cloak R. S. Wilkinson ,2016-02-10 This is a laugh-out-loud collection of memories ranging from 1935 to 2015. Often politically incorrect, these naughty human reflections cover a wide range of subjects and experiences including: the baby's crib jail-break, the younger brother's devious manipulations, joint ventures of disaster and destruction, a totally illegal radio broadcast on a homemade transmitter, which blocked out a major Boston radio station in the town of Brookline, Mass. Featuring awkwardly botched attempts to communicate with girls, also included are a bathtub submarine explosion, several near death automobile experiences, and a wild, high speed, no brakes, bloody ride on a crude, homemade cart. This story is a charming glimpse into what it was like for a mischievous boy growing up in the 1930's, 40's and 50's and finally moving through the hard transitions of becoming a teacher and some of the successes and failures that he has had as an adult. From crib to old age, the author has always worn The Black Cloak of Disapproval, bestowed upon him by those who have led more conventional lives.

Architectural Factors for Infection and Disease Control AnnaMarie Bliss,Dak Kopec,2022-09-05 This edited collection explores disease transmission and the ways that the designed environment has promoted or limited its spread. It discusses the many design factors that can be used for infection and disease control through lenses of history, public health, building technology, design, and education. This book calls on designers to consider the role of the built environment as the primary source of bacterial, viral, and fungal transfers through fomites, ventilation systems, and overcrowding and spatial organization. Through 19 original contributions, it provides an array of perspectives to understand how the designed environment may offer a reprieve from disease. The authors build a historical foundation of infection and disease, using examples ranging from lazarettos to leprosy centers to show how the ability to control infection and disease has long been a concern for humanity. The book goes on to discuss disease propagation, putting forth a variety of ideas to control the transmission of pathogens, including environmental design strategies, pedestrian dynamics, and open space. Its final chapters serve as a prospective way forward, focusing on COVID-19 and the built environment in a post-pandemic world. Written for students and

academics of architecture, design, and urban planning, this book ignites creative action on the ways to design our built environment differently and more holistically. Please note that research on COVID-19 has exponentially grown since this volume was written in October 2020. References cited reflect the evolving nature of research studies at that time.

Smart Technologies for Energy and Environmental Sustainability Parul Agarwal, Mamta Mittal, Jawed Ahmed, Sheikh Mohammad Idrees, 2021-11-30 As the application of smart technologies for monitoring environmental activities becomes more widespread, there is a growing demand for solutions that can help analyze the risk factors and impacts on the environment by focusing on energy consumption, storage, and management. This book is designed to serve as a knowledge-sharing platform, focusing on the emerging models, architectures, and algorithms being developed for smart computational technologies that can lead to efficient energy conservation and environmental sustainability.

Detection of Water Leakage Using Innovative Smart Water System Elias Farah, 2016 This work concerns the use of the Smart Water Technology for the detection of water leakage. It is a part of SunRise project which aims at turning the Scientific Campus of the University of Lille into a large scale demonstrator site of the Smart and Sustainable City. The campus is representative to a small town of 25000 inhabitants. This work is also a part of the European Project SmartWater4 Europe, which aims to develop 4 demonstrators of the Smart Water Technology. This thesis includes five parts. The first part includes a literature review concerning the technologies used in leakage detection. The second part presents the SunRise Smart City demonstrator, which is used as a basis for this thesis. This section details the instrumentation installed in the demo site as well as leak simulations tests to analyze the efficiency of an acoustic system of leakage detection. The third part focuses on the analysis of the water consumption at different time scales. Analysis concerns both sub-meters and bulk meters. It is conducted using a platform for the aggregation and the interpretation of the data. This part presents also major leakage events in 2015. The fourth part concerns leak detection using the water balance calculation based on the top down and bottom up approaches. It also presents the Active Leakage Control (ALC) strategy applied to the demo site in order to reduce the level of Non-Revenue Water (NRW). The last part concerns the use of advanced methods for leak detection with application on the campus data. These methods include the Comparison of Flow Pattern Distribution Method (CFPD), the Minimum Night Flow (MNF) method and two developed statistical approaches.

Emerging Smart Technologies Dr. Matthew N. O Sadiku, 2021-03-04 We live in a world with an abundance of technologies and the technologies are developing and improving rapidly. Technologies are transforming our lifestyles, social interactions, and workplaces. Nearly everyone in the developed nations possesses multiple electronic gadgets (cell phones, tablets, personal computers, laptops, digital notebooks, etc.). Daily use of technology has evolved. Recent advances in the field of technology have led to the emergence of innovative solutions known as smart technologies. A technology is considered smart if it performs a task that an intelligent person can do. A smart or intelligent technology is a self-operative and corrective system that requires little or

no human intervention. Smart technologies can be understood as a generalization of the concept of smart structures and the use of digital and communications technologies. They have given us new, powerful tools to work. Application of such technologies can transform the conventional cities into smart cities, conventional home into smart home, conventional farming into smart farming, etc. Today, we are in an era where everything is expected to be smart. Common examples include smart cities, smart factory, smart agriculture, smart farming, smart healthcare, smart university, smart medication, smart water, smart food, smart materials, smart devices, smart phones, smart grid, smart energy, smart homes, smart buildings, smart metering, smart appliances, smart equipment, smart heating controls, smart lighting systems, smart watch, smart economy, smart environment, smart grids, smart transportation, smart mobility, smart manufacturing, smart living, smart environment, smart people, etc. These technologies will ensure equity, fairness, and realize a better quality of life. The combined autonomy and ambience of smart technologies simultaneously provides the conduit through which our choices are affected. These smart technologies go hand-in-hand with a new technology called the Internet of things (IoT).

Harnessing Bistable Structural Dynamics Ryan L. Harne,Kon-Well Wang,2017-01-06 This book formulates and consolidates a coherent understanding of how harnessing the dynamics of bistable structures may enhance the technical fields of vibration control, energy harvesting, and sensing. Theoretical rigor and practical experimental insights are provided in numerous case studies. The three fields have received significant research interest in recent years, particularly in regards to the advantageous exploitation of nonlinearities. Harnessing the dynamics of bistable structures--that is, systems with two configurations of static equilibria--is a popular subset of the recent efforts. This book provides a timely consolidation of the advancements that are relevant to a large body of active researchers and engineers in these areas of understanding and leveraging nonlinearities for engineering applications. Coverage includes: Provides a one-source reference on how bistable system dynamics may enhance the aims of vibration control, energy harvesting, and sensing with a breadth of case studies Includes details for comprehensive methods of analysis, numerical simulation, and experimentation that are widely useful in the assessment of the dynamics of bistable structures Details approaches to evaluate, by analytical and numerical analysis and experiment, the influences of harmonic and random excitations, multiple degrees-of-freedom, and electromechanical coupling towards tailoring the underlying bistable system dynamics Establishes how intelligently utilizing bistability could enable technology advances that would be useful in various industries, such as automotive engineering, aerospace systems, microsystems and microelectronics, and manufacturing

Smart Machines and the Internet of Things Ryan Nagelhout,2015-12-15 The interconnectivity of appliances, everyday objects, and people to the Web is called the "Internet of Things." Electric cars are being made smart and fast with software updates that are pushed to them wirelessly. Electrical outlets can be tuned off from anywhere

in the world, and people can even track the amount of energy the plugs are using by looking at a cell phone. This insightful volume describes some of these intriguing state-of-the-art devices, including tracking devices to monitor endangered animals or help find lost pets and sensors in water treatment facilities that can help control a city's water supply.

The second published collection from Ernie Witham's syndicated humor column "Ernie's World" this book tells what a year in the life of the "working writer" is like. From searching for that last-possible-moment anniversary gift at the Santa Barbara Farmer's Market, to "appearing" in the movie "Sideways," to observing dolphin sex in the Florida Keys, and then trying to make a living out of it all, this book reveals why Ernie's World is a fun and funny place to visit.

Smart Mobs Howard Rheingold,2007-03-21 From Tokyo to Helsinki, Manhattan to Manila, Howard Rheingold takes us on a journey around the world for a preview of the next techno-cultural shift-a shift he predicts will be as dramatic as the widespread adoption of the PC in the 1980s and the Internet in the 1990s. The coming wave, says Rheingold, is the result of super-efficient mobile communications-cellular phones, personal digital assistants, and wireless-paging and Internet-access devices that will allow us to connect with anyone, anywhere, anytime. From the amusing (Lovegetty devices in Japan that light up when a person with the right date-potential characteristics appears in the vicinity) to the extraordinary (the overthrow of a repressive regime in the Philippines by political activists

who mobilized by forwarding text messages via cell phones), Rheingold gives examples of the fundamentally new ways in which people are already engaging in group or collective action. He also considers the dark side of this phenomenon, such as the coordination of terrorist cells, threats to privacy, and the ability to incite violent behavior. Applying insights from sociology, artificial intelligence, engineering, and anthropology, Rheingold offers a penetrating perspective on the brave new convergence of pop culture, cutting-edge technology, and social activism. At the same time, he reminds us that, as with other technological revolutions, the real impact of mobile communications will come not from the technology itself but from how people use it, resist it, adapt to it, and ultimately use it to transform themselves, their communities, and their institutions.
