Smartphone-Based Human Activity Recognition Jorge Luis Reyes Ortiz, 2015-01-14 The book reports on the author's original work to address the use of today's state-of-the-art smartphones for human physical activity recognition. By exploiting the sensing, computing and communication capabilities currently available in these devices, the author developed a novel smartphone-based activity-recognition system, which takes into consideration all aspects of online human activity recognition, from experimental data

collection, to machine learning algorithms and hardware implementation. The book also discusses and describes solutions to some of the challenges that arose during the development of this approach, such as real-time operation, high accuracy, low battery consumption and unobtrusiveness. It clearly shows that it is possible to perform real-time recognition of activities with high accuracy using current smartphone technologies. As well as a detailed description of the methods, this book also provides readers with a comprehensive review of the fundamental concepts in human activity recognition. It also gives an accurate analysis of the most influential works in the field and discusses them in detail. This thesis was supervised by both the Universitat Politècnica de Catalunya (primary institution) and University of Genoa (secondary institution) as part of the Erasmus Mundus Joint Doctorate in Interactive and Cognitive Environments.

Mobile Tech Report 2014 John R. Roberts, 2014-01-10 If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is

figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters. Table of Contents Preface Introduction Chapter 1: 2014 Predictions Chapter 2: Mobile Marketshare Chapter 3: Apple Chapter 4: Samsung Chapter 5: Google Chapter 6: Microsoft Chapter 7: Nokia Chapter 8: Blackberry Chapter 9: Amazon Chapter 10: Social Media Chapter 11: Yahoo Chapter 12: Carriers Chapter 13: 2013 Predictions Chapter 14: Essays Appendix

Office Ergonomics Anne D. Kroemer, Karl H.E. Kroemer, 2016-10-03 Office ergonomics – whether we realize it or not – directly or indirectly affects every one of us. It is the study of the work we do, the environment we work in, and the tools we use to successfully perform our jobs. Office ergonomics helps us be comfortable and safe at work, which reduces the risk of injury, lowers stress, increases personal engagement, and raises overall work performance. This book embraces and addresses the new reality of the traditional ‘office’ work, which is ever changing and evolving, and offers tactical recommendations on how to make non-traditional office settings more comfortable. This book suggests how to Set up the office, wherever that may be – at a company site, at home, at a corner café, on a commuter train Interact with colleagues Organize and pace work Select and arrange equipment and furniture Maintain the physical climate – lighting, sound, heating and cooling The book is a practical one, based on sound theory and solid research. Written for non-engineers as well as those in the industry, it has a conversational tone, reflects true-life situations that office workers face, and is adaptable to multiple office settings. While budding ergonomists will find it educational, office managers and designers will benefit from it as well. You will find ten fast-paced chapters, augmented with brief case studies and illustrations, and capped off with a series of practical design recommendations. Three appendices delve into ergonomic topics with more thorough details. This book suggests how best to achieve a harmonious work scenario by optimizing the ‘fit’ between the person and his or her environment. This, in a nutshell, is what ergonomics is all about: working with ease and efficiency.

South Korean Education and Learning Excellence as a Hallyu Young Chun Kim,Jae-seong Jo,Jung-Hoon Jung,2023-08-11 This book constitutes a sociological, anthropological, and curricular inquiry into the factors surrounding high academic achievement rates of students in South Korea. Taking root in similar studies conducted around the exemplary nature of the Finnish education model, it explores the phenomenon of success in South Korea, uniquely connecting it to the scholarship and models for examining the recent shift in attention and popularity of Korean culture. The authors argue that Korean education or K-edu can also be studied and understood as a Hallyu and an exemplary form of education. Drawing on longitudinal qualitative studies spanning over 15 years, the authors advance understandings of Korean academic success beyond more generalized understandings of how Asian students learn and towards a holistic explanation for the case of Korea. As such, the book challenges the perception of Korean students as passive learners with a controlled learning culture and instead advocates the ways in which Korean students are leading a changing culture by utilizing all available resources and opportunities in the space of South Korea's evolving ecological system of education. In addition, this book provides one explanation as to how students from East Asian countries achieve such excellent academic performance. A crucial exploration of the culture and growth of education systems in Asian countries, this book will appeal to scholars and researchers with interests in Korean education and Korean students' academic achievement as an emerging inquiry for both Korean studies and East Asian Cultural Studies. In addition, this book will also be informative for scholars of comparative education, sociology of education, educational policy, and postcolonial educational research in the world.

Smartphones as Locative Media Jordan Frith, 2018-06-06 Smartphone adoption has surpassed 50% of the population in more than 15 countries, and there are now more than one million mobile applications people can download to their phones. Many of these applications take advantage of smartphones as locative media, which is what allows smartphones to be located in physical space. Applications that take advantage of people's location are called location-based services, and they are the focus of this book. Smartphones as locative media raise important questions about how we understand the complicated relationship between the Internet and physical space. This book addresses these questions through an interdisciplinary theoretical framework and a detailed analysis of how various popular mobile applications including Google Maps, Facebook, Instagram, Yelp, and Foursquare use people's location to provide information about their surrounding space. The topics explored in this book are essential reading for anyone interested in how smartphones and location-based services have begun to impact the ways we navigate and engage with the physical world.
