Shark Wars EJ Altbacker,2022-05-24 Since the dawn of time, prehistoric shark clans called Shivers have ruled over the earth's oceans, fierce protectors of all who swim. For eons, the Big Blue has prospered under Shiver Law, and the delicate balance of sea life kept sacred. Until now. Rising sea temperatures and overfishing have caused food to become scarce, and the battle for new hunting grounds has brought with it corruption and warfare. Now, with the ocean on the brink of chaos, a young reef shark named Gray - exiled from the safety of his peaceful reef home - must venture deep into Open Water to unlock the secrets of his destiny and bring peace back to the ocean. But first, he'll have to discover the truth about who - and what - he really is.

Snorkel McCorkle and the Lost Flipper Linda R. Thornburg,Katherine Archer,2020-05-08 Snorkel

McCorkle is a ten-year-old eco-warrior determined to fix the unfixable in her life—a manatee's lost flipper, the school bullies, the environment...and even her mom's disappearance at sea. When her kayak is pulled out to sea in a storm, her pals, Matilda the Manatee and Figaro the Opera-Singing Pelican, come to her aid. And the trio is caught in the adventure of their lives!

How to Outswim a Shark Without a Snorkel Jess Keating, 2015-01-06 Keating delivers a fun-filled, pitch-perfect book...An amusing, highly readable book about the perils of being 12 in a snake-eat-snake world.— Kirkus Starred Review on *How to Outrun a Crocodile When Your Shoes Are Untied* (My Life is a Zoo Book 1) Ana Wright's summer just got terrifying. She's finally getting used to living in a zoo (no, seriously—she lives with her family in an actual zoo), when she's assigned to work in the new shark tank. With her worst enemy. Forget about sharks! Ashley is the ultimate predator. And after Ana's favorite croc peed on Ashley's shoes, she's probably out for revenge. This can't be good. Jess Keating combines the quirky humor and animal-centric plots of Carl Hiaasen with the awkward adolescent antics of Lauren Myracle in this fresh new middle grade series! Praise for *How to Outrun a Crocodile When Your Shoes Are Untied*: A menagerie of laugh-out-loud antics. —Anna Staniszewski, author of *The Dirt Diary* A wild romp, filled with humor and heart. — Lisa Schroeder, author of *It's Raining Cupcakes* Keating, a zoologist, enriches her debut novel with fascinating animal facts, awkward moments with a variety of wild species, and creature files

Ana uses to amusingly classify her peers –School Library Journal An absolutely perfect summer read. –Girls' Life Magazine.com Life is literally a zoo for shy 12-year-old Anna, who is trying to avoid seventh-grade bullies while hiding that her family lives among crocodiles and elephants. –Los Angeles Times

Engineering Theories of Software Construction Charles Antony Richard Hoare,M. Broy,Ralf Steinbrüggen,2001 This volume contains lectures presented at the 21st International Summer School on Engineering Theories of Software Construction

(Marktoberdorf, Germany July/August 2000). Eleven contributions from professionals in industry and academia trace the path from the scientific foundations of programming theory through the development of toolsets and methods and on to practical application by working engineers. A sampling of topics includes unifying theories for logic programming, performance modeling using probabilistic process algebra, and extended static checking. The volume is not indexed. Practical Weak Supervision Wee Hyong Tok, Amit Bahree, Senja Filipi, 2021-09-30 Most data scientists and engineers today rely on quality labeled data to train machine learning models. But building a training set manually is time-consuming and expensive, leaving many companies with unfinished ML projects. There's a more practical approach. In this book, Wee Hyong Tok, Amit Bahree, and Senja Filipi show you how to create products using weakly supervised learning models. You'll learn how to build natural language processing and computer vision projects using weakly labeled datasets from Snorkel, a spin-off from the Stanford AI Lab. Because so many companies have pursued ML projects that never go beyond their labs, this book also provides a guide on how to ship the deep learning models you build. Get up to speed on the field of weak supervision, including ways to use it as part of the data science process Use Snorkel AI for weak supervision and data programming Get code examples for using Snorkel to label text and image datasets Use a weakly labeled dataset for text and image

classification Learn practical considerations for using Snorkel with large datasets and using Spark clusters to scale labeling

Total Undersea War Aaron S Hamilton, 2020-05-30
During the last year of World War II the once surface-bound diesel-electric U-boat ushered in the age of "total undersea war" with the introduction of an air mast, or 'snorkel' as it became known among the men who served in Dönitz's submarine fleet. U-boats no longer needed to surface to charge batteries or refresh air; they rarely communicated with their command, operating silently and alone among the shallow coastal waters of the United Kingdom and across to North America. At first, U-boats could remain submerged continuously for a few days, then a few weeks, and finally for months at a time, and they set underwater endurance records not broken for nearly a quarter of a century. The introduction of the snorkel was of paramount concern to the Allies, who strived to frustrate the impact of the device before war's end. Every subsequent wartime U-boat innovation was subordinated to the snorkel, including the new Type XXI Electro-boat "wonder weapon". The snorkel's introduction foreshadowed the nearly un-trackable weapon and instrument of intelligence that the submarine became in the postwar world. This exhaustive study, the first of its kind, draws upon wartime documents from archives around the world to re-evaluate the last year of the U-boat's deployment, all its key

technological innovations, the evolving operations and tactics, and Allied countermeasures. It provides answers to many long-standing questions about the last year of the war: How and why did U-boats patrol so close inshore? How effective was acoustic and anti-radar camouflage? Why was U-boat wireless communication so problematic? How did U-boats navigate so effectively submerged? What were the health implications of staying submerged for a month or more? What does an accurate snorkel-configuration look like? This new study is destined to become the authoritative reference for all these issues and many more.
