Soyuz Rex Hall, David Shayler, 2003-05-07 Rex Hall and Dave Shayler provide a unique history of the Soyuz spacecraft programme from conception, through development to its use, detailed in the only English language book available on this topic. Planned for publication in 2003, it will celebrate 40 years since the original concept of the Soyuz craft.

## Manned Spaceflight Log Tim Furniss, 1963

<u>Salyut - The First Space Station</u> Grujica S. Ivanovich, 2008-10-22 This remarkable book gives a comprehensive account of the longest manned space mission of the time. It details for the first time the people involved and the crews assigned to operate the first space station Salyut. The book portrays the selection of the crews, dramatic flights and tragedy of Soyuz 11. Biographies of the Soyuz 11 cosmonauts are published for the first time in English. The book relates discussions between the key personnel, and investigates the causes of the tragedy. The book ends with memories of all those affected by the DOS program and the tragedy of Soyuz 11 and looks forward to a continuation of the historic mission of Salyut.

Salyut: Soviet steps toward permanent human presence in space., 2008 As the other major spacefaring nation, the Soviet Union is a subject of interest to the Congress in their deliberations concerning the future of U.S. space activities. In the course of an assessment of Civilian Space Stations (in 1983), the Office of Tech. Assessment (OTA) undertook a study of the presence of Soviets in space & their Salyut space stations. The major element in this technical memorandum was a workshop held at OTA in Dec. 1982: it was the first occasion when a significant number of experts in this area of Soviet

space activities had met for extended unclassified discussion. As a result of the workshop, OTA prepared this report. Includes ¿Graphic Comparison of Soviet & U.S. Space Vehicles.¿ Illustrations.

The Soyuz Launch Vehicle Christian Lardier, Stefan Barensky, 2013-03-12 "The Soyuz Launch Vehicle" tells the story, for the first time in a single English-language book, of the extremely successful Soyuz launch vehicle. Built as the world's first intercontinental ballistic missile (ICBM), Soyuz was adapted to launch not only Sputnik but also the first man to orbit Earth, and has been in service for over fifty years in a variety of forms. It has launched all Soviet manned spacecraft and is now the only means of reaching the International Space Station. It was also the workhorse for launching satellites and space probes and has recently been given a second life in French Guiana, fulfilling a commercial role in a joint venture with France. No other launch vehicle has had such a long and illustrious history. This remarkable book gives a complete and accurate description of the two lives of Soyuz, chronicling the recent cooperative space endeavors of Europe and Russia. The book is presented in two parts: Christian Lardier chronicles the "first life" in Russia while Stefan Barensky explores its "second life," covering Starsem, the Franco-Russian company and implementation of technology for the French Guiana Space Agency by ESA. Part One has been developed from Russian sources, providing a descriptive approach to very technical issues. The second part of the book tells the contemporary story of the second life of Soyuz, gathered from Western sources and interviews with key protagonists. "The Soyuz Launch Vehicle" is a detailed description of a formidable human adventure, with its political, technical, and commercial ramifications. At a

time when a new order was taking shape in the space sector, the players being the United States, Russia, Europe and Asia, and when economic difficulties sometimes made it tempting to give up, this book reminds us that in the global sector, nothing is impossible.

Mir Hardware Heritage David S. F. Portree,1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M; the Kvant, Kvant 2, and Kristall modules; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

The Story of Manned Space Stations Philip Baker, 2007-08-20 This book charts the history of manned space stations in a logical, chronological order. It tells the story of the two major space powers starting out on their very separate programs, but slowly coming together. It describes rarely mentioned development programs, most of which never flew, including the US Manned Orbiting Laboratory, the Soviet Almaz station, and the Soviet Polyus battlestation. The Mir space station was one of the greatest human achievements in modern history, and a thorough telling of its story is essential to this book. This book is the first of its kind to tell the whole

story of the manned space stations from the USA and Russia.

Creating the International Space Station David M. Harland, John Catchpole, 2002-02-06 As the most obvious man-made object in the night sky, clearly visible to the naked eye, the International Space Station is of interest to almost everyone. Richly illustrated with around 100 figures this is the first book to describe the technical aspects of its design and construction and details of its day-to-day operation. The text relates the orbital assembly on a flight-by-flight basis, listing all the experiments in NASA's laboratory and explains their objectives. By offering a comprehensive mix of operational work, microgravity, science and future plans, it will satisfy both the space enthusiast, eager for a detailed review of the missions, and the specialist wishing to learn more about this science programme.

Biological Experiments in Space Galina Nechitailo, Alexey
Kondyurin, 2021-07-10 Biological Experiments in Space: 30 Years Investigating
Life in Space Orbit covers investigations of plant, algae, animals, fish,
microorganisms and tissue cultures on space flights, beginning with the first
orbital space station on Salyut 1. The book includes results on the influence
of the entire complex of physical factors associated with spaceflight on
biological systems, including analysis of the impact of microgravity on
organisms, as well as the effects of electric and magnetic fields. This book
offers important insights for researchers of space biology and astrobiology,
as well as space agency and industry specialists developing future space
stations and missions. Lack of gravity, temperature and chemical gradients,

magnetic and electrical fields, spectral composition and intensity of light, and high-energy cosmic radiation influence many important metabolic and physiological processes in animals, plants, and microorganisms, as well as transfer phenomena in and around them. Success of future space exploration depends on understanding the effects of these factors on biological organisms and developing appropriate countermeasures, aimed at improving growth, development, and reproduction in microgravity. Includes results on the influence of the entire complex of physical factors associated with spaceflight on a range of biological systems Analyzes the impacts of microgravity, as well as electric and magnetic fields, on organisms Covers pioneering investigations of plants, algae, animals, fish, microorganisms and tissue culture in space flights

Soviets in Space Colin Burgess, 2022-08-08 A beautifully illustrated history of the Soviet Union's leading role in the space race. In this deeply researched chronology, Colin Burgess describes the then Soviet Union's extraordinary success in the pioneering years of space exploration. Within a decade, the Soviets not only launched the world's first satellite, Sputnik, in 1957, but they also were the first to send an animal and a human being into Earth orbit. In the years that followed, their groundbreaking missions sent a woman into space, launched a three-man spacecraft, and included the first person to walk in space. Six decades on from the historic spaceflight of cosmonaut Yuri Gagarin, Burgess guides us through the amazing achievements of Russia's spaceflight program through to the present day, introducing the

men and women who have flown the missions that drive us to delve ever deeper into the wonders and complexities of the cosmos.
