What Happens to Space Probes? Todd Swatling,2018-07-15 We've come so far in space exploration in just the past 10 years. Young readers know that NASA sends spacecrafts to space regularly. They may even hear in the news about the incredible photographs and information they send back. But do they know how they work once they're released into space? This book makes STEAM studies exciting for even the most reluctant reader by framing science curriculum topics within the awesome field of astronomy, and by using easy-to-understand language and bold graphics.

Explore Space Probes Lola Schaefer,2022-08-01 How do we know if there is water on Mars? How do we know what planets look like? We send probes to look around! Readers learn how scientists use space probes to study planets in our solar system . . . and beyond. Fascinating backmatter features a diagram of a space probe and an amazing true story.

Probing the New Solar System John Wilkinson, 2009-01-08 Exploration by space probes has revealed many fascinating details about Earth's planetary neighbours. Today we stand on the threshold of the next phase of planetary exploration and knowledge, with several space probe missions currently underway and others being planned. Probing the New Solar System discusses the latest findings that have contributed to a changed understanding of the solar system – and how the revised definition of a planet in 2006 by the International Astronomical Union affected this understanding. Each chapter includes some historical information, 'Did you know?' items of particular interest to readers, and photographs of objects in the solar system showing newly discovered features of the planets, their moons and of dwarf planets. This is an up-to-date record of the many recent discoveries made about our solar system and other planetary systems using ground-based and space probe technology. It has been written for people interested in astronomy, both

professional and amateur, as well as for students and educators.

Space Probes Philippe Séguéla, 2011 The first complete, up-to-date history of space probe exploration. In just 50 years, space exploration has advanced from the Luna 1, the first artificial object to overcome Earth's gravitational field, to the New Horizons Mission, which will reach Pluto in 2015. Progress has been spectacular, and it bodes well for the remarkable achievements to come. *Space Probes* is the first complete and fully illustrated history of the international space exploration program. Thoroughly up to date, it is organized by destination and includes every space probe launched by all countries active in space exploration -- the United States, the USSR/Russia, the European Union, Japan, China and India. Fascinating photographs and technical drawings give an inside view of each mission, and special features focus on key engineers and physicists and the fruits of their research. After a section on the history of astronomy, *Space Probes* covers missions to: The moon, the first objective Venus, our sister planet Mars, the red planet Jupiter, Saturn, Uranus and Neptune, the giant planets Mercury The sun Comets Asteroids and the dwarf planets Future missions. Deep Space Probes Gregory L. Matloff, 2010-10-21 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun. Deep-Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey. Many

technical problems remain to be solved, among them propulsion systems to permit far higher velocities, and technologies to build vehicles a fraction of the size of today's spacecraft. Beyond the range of effective radio control, robot vehicles for exploring deep space will need to be intelligent, 'thinking' craft – able to make vital decisions entirely on their own. Gregory Matloff also looks at the possibility for human travel into interstellar space, and some of the immense problems that such journeys would entail. This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes – a NASA-funded project.

Deep Space Probe: KRONOS John Macurdy, A manned deep space mission goes horribly wrong. Decades in the future, when near-light-speed space travel is a reality, an explosion rips through deep space probe Kronos, crippling it, killing half the crew, and terminating their assignment. The Perseverance, a new class of military ship with the capacity to catch up to Kronos, is launched, carrying the uncanny Colonel Bruce on board. His ability to

overcome every obstacle, coupled with a secret mission he can't reveal, makes him a formidable, if inscrutable hero. Murder and sabotage become commonplace onboard ship. It is up to Colonel Bruce to unravel the mystery . . . and live long enough to tell all that he knows. When President of the United States Robert Hughes Daley saves a survivor of a flying vehicle off the coast of the Seychelles: "What say we take your helmet off and let you breathe some fresh air, Captain." "Good idea," the pilot exasperated wearily. He then touched a button at his wrist, and the helmet came off with another hiss of an airtight seal being broken. The pilot then reached up and removed the helmet completely. Daley could only stare in confusion. The skin color, the shape of the eyes, texture of hair, the teeth – oh, my God – the teeth! The pilot, for gross appearances was human, but upon further examination was no more human than the orangutans of Borneo.
