Fundamentals of Petroleum United States. Bureau of Naval Personnel,1953 Basic information on petroleum is presented in this book prepared for naval logistics officers. Petroleum in national defense is discussed in connection with consumption statistics, productive capacity, world's resources, and steps in logistics. Chemical and geological analyses are made in efforts to familiarize methods of refining, measuring, sampling, and testing petroleum products. Military specifications are described with a background of property requirements of kerosene, lubricating oils and greases, aviation and automotive gasolines, and jet, diesel, and burner fuels. In quality surveillance, deterioration, contamination, and reclamation aspects are presented in relation to bulk storage facilities; and in safety precautions, hazards, fire, and explosion are mentioned in relation to pipelines, tank cars, tank barges, tank trucks, and, especially tanker operations. Also included are operational procedures at fuel depots. Illustrations for explanation purposes, a glossary of general terms, and a suggested reading list are included.

Liquid Sloshing Dynamics Raouf A. Ibrahim,2005-05-19 The problem of liquid sloshing in moving or stationary containers remains of great concern to aerospace, civil, and nuclear engineers; physicists; designers of road tankers and ship tankers; and mathematicians. Beginning with the fundamentals of liquid sloshing theory, this book takes the reader systematically from basic theory to advanced analytical and experimental results in a self-contained and coherent format. The book is divided into four sections. Part I deals with the theory of linear liquid sloshing dynamics; Part II addresses the nonlinear theory of liquid sloshing dynamics, Faraday waves, and sloshing impacts; Part III presents the problem of linear and nonlinear interaction of liquid sloshing dynamics with elastic containers and supported structures; and Part IV considers the fluid dynamics in spinning containers and microgravity sloshing. This book will be invaluable to researchers and graduate students in mechanical and aeronautical engineering, designers of liquid containers, and applied mathematicians.

Experimental Investigation of the Vertical Forces Acting on Prolate Spheroids in Sinusoidal Heave Motion Thomas C. Watson,1961 A planar motion generator for constraining a small ship model to pure sinusoidal motion in any one of several degrees of freedom plus combinations of certain of these, was designed and constructed. The apparatus, briefly described here, was tested for operation in heave motion only. Presented herein are the results of vertical force measurements made for each of three horizontal, prolate spheroids oscillating at various frequencies in a free surface and at different depths of submergence. The measured forces for the surface tests are compared with results obtained by strip calculations. Theoretical values of added mass and damping for a horizontal, semi-immersed, circular cylinder of infinite length oscillating in heave were used in the strip calculations.

Comprehensive Volume and Capacity Measurements S.V. Gupta,2006-12 It is for the first time that a book of this magnitude covering the entire subject of volume and capacity measurements has hit the market. The strong point of the book is its more than 100 tables containing various corrections, factors, and conversions to compensate for various influence parameters. The most recent available data has been used in respect of density of water and mercury. Latest temperature scale namely, ITS 90 has been used. All possible permutation and combinations of influence parameters like coefficient of expansion, density of standard weights used, and reference temperatures have been used in preparing corrections/factors tables.The book contains 14 chapters. It is for the first time that concept of solid base primary standard of volume has been discussed. Various standards of volume and capacity, starting from solid base primary standard down to field standards, have been detailed. The chapters 1 and 2 also include realization, hierarchy, traceability, periods of verification, and maximum permissible errors of various standards. Precautions and recording of data using gravimetric/volumetric methods have been described.Step by step methods of calibration of volumetric measures have been discussed. Volumetric glassware from one microlitre upward has been dealt with in detail. Design, fabrication, and calibration of standard capacity measuring from 10 millilitres to 5,000 litres have been discussed. Verification methods of high capacity storage tanks of various shapes and orientation, including ships and barges of a few thousand cubic-metres is one of the firsts of the book.Separate chapters on vehicle tanks carrying petroleum, edible liquids, and likes have been presented. Design and fabrication of large capacity measures to be used as standards have also been dealt with. The range of measurement covered is from one micro litre to several million litres.
